Cumulative Subject Index of Volumes 1–50

Abusive testing
abusive testing of large $Li/SOCl_2$ cells, **5**, 73
Accumulation pilot plant
development of a 0.1 kW power accumulation pilot plant based on an Fe/Cr redox flow battery. Part 1. Considerations on flow-distribution design, **48**, 293
Acetonitrile
surface films on lithium in acetonitrile–sulfur dioxide solutions, **9**, 273
Acetonitrile electrolytes
the cycling behaviour and stability of the lithium electrode in propylene carbonate and acetonitrile electrolytes, **10**, 1
galvanostatic cycling of lithium/titanium disulfide cells in propylene carbonate and propylene carbonate–acetonitrile electrolytes, **10**, 23
$LiAsF_6$ is propylene carbonate–acetonitrile for primary lithium batteries, **10**, 13
Acid diffusion
the influence of acid diffusion on the performance of lead/acid cells, **10**, 355
Acid electrolytes
carbon-based electrodes carrying platinum-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, **19**, 279
electrocatalysis of the oxygen reduction process on metal chelates in acid electrolyte, **2**, 233
fuel cell assemblies with an acidic electrolyte, **1**, 177
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as catalysts for the electrochemical reduction of oxygen in acid electrolytes, **13**, 217
highly dispersed tungsten carbide for fuel cells with an acidic electrolyte, **1**, 169
influence of carrier material on catalytic activity of double layer diffusion electrodes for reduction of oxygen in acidic electrolytets, **2**, 361
the methanol/air fuel cell: a selective review of methanol oxidation mechanisms at platinum electrodes in acid electrolytes, **4**, 191
study of polymeric iron phthalocyanine as electrocatalyst for reduction of oxygen in acidic electrolytes, **2**, 351
tetrathiofulvalenes as catalysts for the reduction of oxygen in acid electrolytes, **6**, 193
Acid fuel cells
oxygen-reducing electrodes for acid fuel cells, **15**, 201
Activating conditions
thermopassivation of the positive lead/acid battery electrode. Part II. Influence of activating conditions on the thermopassivation of dry-charged positive electrodes of the lead/acid accumulator, **10**, 43
Activation
fabrication and activation studies of condcting plastic composite electrodes for redox cells, **36**, 29
thin layer actiation studies of material migration during the operation of lead/acid cells, **37**, 415
Activators
influence of activators and inhibitors on the positive active material of lead/acid batteries, **30**, 107
Active layers
plastic-bonded electrodes for nickel/cadmium accumulators. III. Influence of active layer composition on galvanostatic and potentiostatic discharge curves, **4**, 349
plastic-bonded electrodes for nickel/cadmium accumulators. IV. Some specific problems of the positive active layer, **5**, 207
Active mass
the effect of current density and thickness of the active mass upon the corrosion rate of the spines of lead/

acid battery plates, **10**, 291
electronic conductivity of battery active masses – a limiting factor?, **5**, 255
impedance of porous electrochemical systems: study of the negative active mass of the lead/acid battery, **30**, 269
influence of antimony on the electrochemical behaviour and the structure of the lead dioxide active mass of lead/acid batteries, **42**, 71
influence of crystal and gel zones on the capacity of the lead dioxide active mass (extended abstract), **40**, 169
influence of the lead dioxide active mass on the corrosion rate of the spines of positive lead/acid battery plates, **6**, 15
the influence of stand time on tribasic and tetrabasic lead sulfate containing lead/acid battery active masses, **38**, 273
an investigation of the structure of the active mass of the negative plate of lead/acid batteries, **7**, 153
measurement of the contact resistance between the active mass and the current collector in lead/acid battery electrodes, **30**, 315
progressive discharge reaction of positive active mass on lead/acid batteries, **1**, 127
the role of additive in the positive active mass of the lead/acid cell, **27**, 127
structural changes in the active mass of the negative electrode of the lead/acid battery during charging, **32**, 143
structural models for nickel active mass, **22**, 351

Active material
the capacity limiting role of the electronic conductivity of the active material in lead/acid batteries during discharge, **7**, 281
changes in the morphology and structure of positive active material of starter batteries as a consequence of their use in vehicles, **47**, 189
conducting polymers as active materials in electrochemical capacitors, **47**, 89
copper (II) sulfide as cathode active material in secondary lithium batteries, **44**, 701
fibrous polyaniline as positive active material in lithium secondary batteries, **20**, 249
the gassing behaviour of lead/acid negative active material and development of a quality control test for lead oxide purity, **24**, 127
influence of activators and inhibitors on the positive active material of lead/acid batteries, **30**, 107
migration of cobalt in nickel oxide/hydroxide active material of a nickel electrode in a Ni/H_2 cell, **50**, 57
molybdic oxides as cathode active materials in secondary lithium batteries, **26**, 373
optimisation of active material for positive electrodes of Ni/Cd accumulators, **8**, 9
PbO_2 active material as an electro-crystalline network, **46**, 219
phenomena at the interface between positive active material and lead/calcium/tin grids, **30**, 23
on the possible use of titanium and its allows and compounds as active materials in batteries. A review, **2**, 201
thermal analysis of active materials for the lead/acid battery, **48**, 77

Active metals
semiconductivity and solid electrolyte characteristics of surface films formed on active metal of interest in high energy density batteries, **24**, 243
surface film effect on the electrochemical behaviour of active metals, **22**, 99

Active surface
influence of the active surface and pore structure on the electrochemical properties of porous electrodes, **9**, 73

Addition agent
a new type of nonpoisonous addition agent for substituting mercury in zinc/manganese dry cells, **45**, 169

Additives
bismuth oxide as an additive in pasted zinc electrodes, **15**, 169
cycling of β-LiAl in organic electrolytes – effect of electrode contaminations and electrolyte additives, **14**, 193
design of additives to enhance the performance of the lead anode in sulfuric acid, **30**, 193

the effect of additives on the anodic behaviour of cadmium in KOH solutions, **18**, 33
effect of additives on the corrosion of zinc in KOH solution, **6**, 47
the effect of additives on the positive lead/acid battery electrode, **14**, 305
the effect of a lignosulfate type additive on the lead/acid battery positive plate reactions, **27**, 245
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, **41**, 99
effect of organic additives on the lead/acid negative plate, **30**, 185
effects of an additive material, $CuFeS_2$, on Li/CuO battery performance, **20**, 119
effect of silver, copper and palladium additives on the performance of carbon electrodes in an $Li/SOCl_2$ system, **16**, 233
effects of sulfur additive on the performance of $Na/NiCl_2$ cells, **48**, 349
electrolyte additives for zinc-anoded secondary cells, **28**, 345
electrolyte additives for zinc-anoded secondary cells. II. Quaternary ammonium compounds, **32**, 31
evaluation of hollow, glass microspheres used as an additive in negative, lead/acid battery paste, **38**, 287
evaluation of hollow, glass microspheres used as an additives in positive, lead/acid battery paste, **34**, 217
examination of the graphite additives to electrodes, **18**, 305
further work on additives in the zinc plates of nickel/zinc test cells, **11**, 7
inorganic film-forming electrolyte additives improving the cycling behaviour of metallic lithium electrodes and the self-discharge of carbon/lithium electrodes, **44**, 413
investigations of the negative plate of lead/acid cells. 1. Section of additives, **47**, 129
kinetics of hydrogen-evolution reaction on lead and lead-alloy electrodes in sulfuric acid electrolyte with phosphoric acid and antimony additives, **48**, 371
long-term discharge characteristics of lithium/iodine cells with an additive in poly(2-vinylpyridine) iodide, **20**, 141
organic additives for the electrolytes of rechargeable lithium batteries, **26**, 579
reduction of voltage delay in the $Li/SOCl_2$ system – a study of polymers with chlorine substituent groups as delay reducing additives, **20**, 61
the role of additive in the positive active mass of the lead/acid cell, **27**, 127
study of electrode processes in Pb/H_2SO_4 + additive systems, **30**, 177
Adsorption behaviour
adsorption behaviour in the gas phase of carbides prepared from different starting materials, **7**, 257
Ageing
ageing behaviour of cast Pb/Sb battery grids, **4**, 53
ageing of rechargeable lithium batteries, **14**, 57
autonormalization of battery test data to significantly reduce impact of battery aging on test results, **17**, 107
the effect of ageing on the anodic corrosion of Pb–Sb alloys, **3**, 145
electrochemical impregnation bath aging, **12**, 277
influence of the operating conditions and of the ageing upon the electrochemical performance of a phosphoric acid fuel cell, **42**, 365
on the problem of ageing of carbon/air electrodes in alkaline electrolytes, **5**, 189
Agglomerate of spheres
the agglomerate-of-spheres model. Theoretical considerations, **46**, 211
Aggregate-of-spheres model
the aggregate-of-spheres ('Kugelhaufen') model of the $PbO_2/PbSO_4$ electrode, **30**, 209
Air electrodes
a mathematical model and optimization of the structure for porous air electrodes, **32**, 207
optimization of the pyrolysis temperature of active carbon–CoTMPP catalysts for air electrodes in alkaline media, **17**, 345
preparation and measurement of air electrodes for alkaline fuel

cells, **32**, 233
Air gas-diffusion electrodes
comparative methods for the estimation of the activity and the transport hindrances of air gas-diffusion electrodes, **13**, 181
Air pollution
air-pollution control in Taiwan, **23**, 247
Airport equipment
lead/acid batteries for airport ground-support equipment, **19**, 231
Air quality
fuel cells and air quality: a California perspective, **49**, 209
Alkali ions
solid electrolytes containing both mobile and immobile alkali ions, **5**, 137
Alkali metal–polymer complexes
mechanism of ion conduction in alkali metal–polymer complexes, **9**, 383
Alkali metal alloys
studies on the alkali metal alloy/chlorine secondary battery, **1**, 159
Alkaline accumulators
soluble zinc electrode as anode in alkaline accumulators, **5**, 235
Alkaline battery(ies)
high-porosity sintered cobalt negative electrodes for alkaline batteries, **16**, 271
a thermodynamic framework for estimating the efficiencies of alkaline batteries, **18**, 1
Alkaline cell systems
electrical properties of nickel hydroxide for alkaline cell systems, **48**, 361
Alkaline electrolyte/lithium battery(ies)
alkaline electrolyte/lithium miniature primary batteries, **7**, 165
Alkaline electrolytes
behaviour of magnesium electrodes in aqueous alkaline electrolytes, **1**, 221
carbon-based electrodes carrying platinum-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, **19**, 279
discharge characteristics of CMD, EMD, rho and synthetic birnessite in concentrated alkaline electrolyte, **23**, 309
electrochemical properties of active carbon in acid and alkaline electrolytes, **1**, 285
the electrodeposition of zinc onto graphitic carbon substrates from alkaline electrolytes, **24**, 21
high-performance platinized carbon electrodes for oxygen reduction in power sources with alkaline electrolytes, **13**, 273
the influence of a CrO_3–graphite intercalation compound on the discharge characteristics of an MnO_2 cathode in alkaline electrolyte, **25**, 133
oxygen-reducing porous carbon electrode for electrochemical power sources with alkaline electrolytes, **10**, 333
study of iron oxide electrodes in an alkaline electrolyte, **19**, 315
voltammetric study of an iron electrode in alkaline electrolyte, **25**, 111
Alkaline fuel cells
alkaline falling-film fuel cell. A breakthrough in technology and cost, **50**, 311
development of low cost alkaline fuel cells, **18**, 317
Alkylammonium polyiodide
on the discharge mechanism of silver/alkylammonium polyiodide solid state cells, **2**, 389
Alloys
age-hardening of grid alloys and its effect on battery manufacturing processes, **38**, 49
age hardening of a Pb–0.1wt.%Ca–0.3wt.%Sn alloy and the effects of heat during battery manufacturing on this process, **42**, 35
alloy/conducting-polymer composite electrodes: electrolyte, cathodes, and morphology, **26**, 93
alloys for hydrogen storage in nickel/hydrogen and nickel/metal hydride batteries, **47**, 261
analysis of the conditions that promote passivation on calcium–alloy grids in lead/acid batteries, **36**, 451
the anodic behaviour of tin and a lead–tin alloy in sulfuric acid, **40**, 217
anodic oxidation of ethylene glycol with noble metal alloy catalysts, **1**, 249
behaviour of lead–calcium alloys in positive plates of flooded and recombinant lead/acid batteries, **33**, 59
castability of low-antimony/lead battery alloys, **40**, 225

an *in situ* of the effect of tin on the passivation of lead–tin alloys, **50**, 141
in situ Fourier-transform infrared investigations of lead electrodes in sulfuric acid: formation of lead sulfate on lead and lead alloys, **42**, 137
a comparative study of the effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, **13**, 297
corrosion behaviour of low-antimony lead alloy in sulfuric acid solution, **50**, 47
corrosion of magnesium alloy in aqueous magnesium perchlorate battery electrolyte — a gasometry study, **39**, 107
cycling behaviour of electrodeposited zinc alloy electrode for secondary lithium batteries, **40**, 283
demands on automotive battery performance, what is the best alloy?, **33**, 285
development of new alloys of commercial aluminium (2S) with zinc, indium, tin, and bismuth as anodes for alkaline batteries, **27**, 235
discontinuous and continuous hardening processes in calcium and calcium–tin microalloyed lead: influence of 'secondary-lead' impurities, **33**, 27
the effect of ageing on the anodic corrosion of Pb–Sb alloys, **3**, 145
effects of alloying substrates on the characteristics of the lithium negative electrode, **26**, 573
effects of grid alloy on the properties of positive-plate corrosion layers in lead/acid batteires. Implications for premature capacity loss under repetitive deep-discharge cycling service, **48**, 195
effect of some elements on the performance of lead–antimony alloys for lead/acod batteries, **31**, 169
electrochemical investigation of lead-calcium alloys in sulfuric acid, **21**, 151
electrochemical studies on a zinc–lead–cadmium alloy in aqueous ammonium chloride solution, **47**, 177
gas evolution behavior of Zn alloy powder in KOH solution, **38**, 317
grid alloys for maintenance-free deep-cycling batteries, **33**, 3
hydrogen evolution on lead–tin alloys, **17**, 361
the hydrogen evolution reaction on lead-bismuth alloys, **22**, 11
improved grid alloys for deep-cycling lead/calcium batteries, **33**, 13
influence of cobalt ions on the behaviour of maintenance-free lead/acid batteries with antimony alloys, **31**, 151
investigations on rechargeable lithium alloys on the basis of Al–Ni and A–Mn alloys, **44**, 421
joining of lead–antimony and lead–calcium alloy lugs by a laboratory cast-on-strap process, **46**, 311
kinetics of hydrogen-evolution reaction on lead and lead-alloy electrodes in sulfuric acid electrolyte with phosphoric acid and antimony additives, **48**, 371
lead–calcium alloys in the production of lead/acid batteries, **33**, 51
lead–strontium alloys for battery grids, **2**, 337
lead/acid batteries with low antimony alloys, **1**, 3
lead alloys into the 1990s, **31**, 177
lead alloys for maintenance-free and sealed lead/acid batteries, **46**, 327
lithium electrodes based upon aluminium and alloy substrates. I. Impedance measurements on aluminium, **28**, 259
low-antimony–lead alloy strip production, **38**, 59
low-antimony lead-alloy expanded grids: preliminary performance data, **42**, 47
materials science principles related to alloys of potential use in rechargeable lithium cells, **26**, 109
multinary alloy electrodes for solid state batteries. I. A phase diagram approach for the selection and storage properties determination of candidate electrode materials, **38**, 351
multinary alloy electrodes for solid state batteries. II. A new Li–Si–Mg alloy negative electrode material for use in high energy denisty rechargeable lithium cells, **38**, 363

a new lead–calcium alloy for maintenance-free lead/acid batteries, **31**, 163
performance of lithium alloy/lithium and calcium/lithium anodes in thionyl chloride cells, **15**, 239
polyphase alloys as rechargeable electrodes in advanced battery systems, **22**, 341
on the possible use of titanium and its allows and compounds as active materials in batteries. A review, **2**, 201
the problem of maintaining Ca concentration in Pb–Ca alloys for grid casting, **3**, 367
recent advances in silicon–germanium alloy technology and an assessment of the problems of building the modules for a radioisotope thermoelectric generator, **19**, 247
refining of a lead/acid battery grid alloy, **3**, 183
a room temperature β-alumina primary cell employing sodium–potassium alloy as anodic reactant, **3**, 191
the secondary lithium/aluminium electrode at room temperature. II. kinetics of the electrochemical formation of the lithium–aluminium alloy, **12**, 155
studies on the alkali metal alloy/chlorine secondary battery, **1**, 159
a study of the electrochemical properties of lead-strontium alloys for lead/acid batteries, **33**, 21
surface treatment of alloy separator in a planar-type solid oxide fuel cell, **50**, 361
trends in battery alloy demand from a European perspective, **48**, 49
trends in lead/acid battery alloy use and metallurgy, **19**, 133
unusual effects of ammonium ligno-sulfonate on the electrochemical behaviour of lead, lead–calcium, and lead–antimony alloys, **40**, 323

Aluminum

aluminium and manganese as anodes for dry and reserve batteries, **11**, 155
anodic dissolution of aluminium in non-aqueous electrolytes, **42**, 377
conductivity of $LiAlCl_4$ solutions in nitromethane containing SO_2, **12**, 31
corrosion behaviour of aluminium in molten sodium, **47**, 45
cycling of β-LiAl in organic electrolytes — effect of electrode contaminations and electrolyte additives, **14**, 193
development of new alloys of commercial aluminium (2S) with zinc, indium, tin, and bismuth as anodes for alkaline batteries, **27**, 235
electrochemical studies of P3-MT electrodes in $LiAlCl_4$–SO_2 electrolyte (extended abstract), **26**, 553
electrolytes for the high temperature fuel cell; experimental and theoretical studies of the perovskite $LaAlO_3$, **3**, 67
evaluation and optimization of pelletized $LiAl/NaAlCl_4/MoCl_5$ electrochemical cells, **3**, 81
experimental studies of transition metal chloride electrodes in undivided cells using molten $NaAlCl_4$ electrolyte, **36**, 537
the influence of electrolyte additives on the anodic dissolution of aluminum in alkaline solutions, **5**, 245
influence of inhibitors on corrosion and anodic behaviour of different grades of aluminium in alkaline media, **50**, 321
interactions of SO_2 with $Ca(AlCl_4)_2$–SO_2Cl_2 electrolyte: Raman studies, **25**, 187
investigations on rechargeable lithium alloys on the basis of Al–Ni and A–Mn alloys, **44**, 421
the $LiAl/NaAlCl_4/MoCl_5$ thermal battery, **3**, 95
lithium electrodes based upon aluminium and alloy substrates. I. Impedance measurements on aluminium, **28**, 259
magnesia porous particle separators for lithium–aluminum/iron sulfide batteries, **13**, 235
pelletized lithium/metal sulfide cells. Part II. Some operating characteristics of pelletized LiAl–FeS cells, **8**, 341
performance of calcium/thionyl chloride cells containing $Sr(AlCl_4)_2$ electrolyte, **28**, 295
precision cycling and Coulombic efficiency measurements in Li/MoS_2 and

Li, Al/FeS cells, **26**, 293
pulse power characteristics of poly(3-methylthiophene) cathodes in $Li(SO_2)_3AlCl_4$ electrolyte, **36**, 175
Raman spectroscopic study of $LiAlCl_4/SOCl_2/SO_2$ systems, **14**, 77
the secondary lithium/aluminium electrode at room temperature. I. cycling in $LiClO_4$–propylene carbonate solutions, **12**, 145
the secondary lithium/aluminium electrode at room temperature. II. kinetics of the electrochemical formation of the lithium–aluminium alloy, **12**, 155
solid electrolyte interphase (SEI) electrodes. Part VI: Calcium/$Ca(AlCl_4)_2$/sulfuryl chloride system, **10**, 125
solid electrolyte interphase (SEI) electrodes. Part VII. The electrochemical behaviour of calcium in $Ba(AlCl_4)_2$ and $Sr(AlCl_4)_2$-thionyl chloride solutions (extended abstract), **26**, 423
a study of the reaction kinetics of $SOCl_2$ in electrolytes containing $AlCl_3$ or $LiAlCl_4$, **21**, 119
thin foil lithium/aluminum electrodes. The effect of thermal treatment on its electrochemical behaviour in non-aqueous media, **24**, 71

Aluminum/air battery(ies)
heat management in aluminium/air batteries: sources of heat, **50**, 331
metallized graphite as an improved cathode material for aluminium/air batteries, **45**, 243
studies on the best alkaline electrolyte for aluminium/air batteries, **39**, 263

Aluminum batteries
isopropoxide ion – a novel depolarized for aluminium batteries, **37**, 411

Aluminum/carbon cells
studies on an aluminium/carbon cell, **50**, 187

Aluminum electrodes
studies on the anodic behavior of aluminum electrodes in alkaline solution, **45**, 105

Aluminum/lithium electrodes
on the processes responsible for the degradation of the aluminium/lithium electrode used as anode material in lithium aprotic electrolyte batteries, **9**, 235

Aluminum/oxygen battery(ies)
aluminum/oxygen batteries for space applications, **22**, 261

Aluminum/oxygen cells
high energy density aluminum/oxygen cell, **47**, 329

Aluminum/polycrystalline silicon solar cells
the influence of surface preparation on rectification in aluminum/polycrystalline silicon solar cells, **7**, 191

Aluminum/sea water battery(ies)
development of an aluminium/sea water battery for sub-sea applications, **47**, 119

Aluminum/sulfur battery(ies)
investigation of a novel aqueous aluminum/sulfur battery, **45**, 311

Amalgamation
a comparative study of the effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, **13**, 297

Ammonia
ammonia as a feedstock for a hydrogen fuel cell; reformer and fuel cell behaviour, **49**, 271
cathodic performance of some sulfide electrodes in liquid ammonia, **3**, 157

Ammonium
influence of water addition on structural and electrochemical behaviour of liquid ammoniates: a study of $LiClO_4 \cdot 4NH_3$ ammoniate/H_2 mixtures, **20**, 305

Ammonium bromides
selection of quaternary ammonium bromides for use in zinc/bromine cells, **18**, 349

Ammonium compounds
electrolyte additives for zinc-anoded secondary cells. II. Quaternary ammonium compounds, **32**, 31

Ammonium ligno-sulfonate
unusual effects of ammonium ligno-sulfonate on the electrochemical behaviour of lead, lead–calcium, and lead–antimony alloys, **40**, 323

Amorphous electrolyte
electrochemical performance of silver/molybdotungstate-amorphous-electrolyte cells with charge-transfer-complex cathodes, **25**, 287

Anatase
anatase as a cathode material in lithium–organic electrolyte rechargeable batteries, **6**, 261
electrochemistry of anatase titanium dioxide in lithium nonaqueous cells, **14**, 153
Aniline
application of FeOCl derivatives as cathode materials for a secondary lithium battery. II. Comparison of the discharge and charge characteristics of γ-FeOOH prepared from the intercalation compound of FeOCl and 4-aminopyridine with those of FeOOH intercalated with aniline (a-FeOOH(AN)), **40**, 291
Anion behaviour
anion behaviour in a polyacetylene cathode for a secondary lithium battery, **20**, 231
Anion diffusion process
application of electrochemcially formed polypyrrole in lithium secondary batteries: analysis of anion diffusion process, **20**, 237
Anode growth
forces generated by anode growth in cylindrical Li/MoS_2 cells, **34**, 31
Anode materials
on the processes responsible for the degradation of the aluminium/lithium electrode used as anode material in lithium aprotic electrolyte batteries, **9**, 235
Anodic behaviour
the effect of additives on the anodic behaviour of cadmium in KOH solutions, **18**, 33
influence of inhibitors on corrosion and anodic behaviour of different grades of aluminium in alkaline media, **50**, 321
Anodic dissolution
the influence of electrolyte additives on the anodic dissolution of aluminum in alkaline solutions, **5**, 245
Anodic film resistance
electrochemical determination of the anode film resistance and double layer capacitance in magnesium/manganese dioxide dry cells, **15**, 27
Anodic limitation
a study of rechargeable zinc electrodes for alkaline cells requiring anodic limitation, **6**, 271
Anodic oxidation
anodic oxidation of ethylene glycol with noble metal alloy catalysts, **1**, 249
Anodic passivating layers
a.c. impedance studies of the anodic passivating layer in lithium/$SOCl_2$ batteries, **25**, 123
Anodic passivation
the anodic passivation of lithium, **10**, 105
anodic passivation of lithium in electrolytes for Li/SO_2 cells at low temperatures, **13**, 327
Anodic reactants
a room temperature β-alumina primary cell employing sodium–potassium alloy as anodic reactant, **3**, 191
Anodization
positive electrode for galvanic cells prepared by anodization of CrO_3–graphite intercalation compounds in aqueous sulfuric acid, **41**, 263
Antimonial positive grids
a system evaluation of lead/acid battery chargers. Part I. Cells with antimonial positive grids, **2**, 301
Antimony
ageing behaviour of cast Pb/Sb battery grids, **4**, 53
antimony in lead/acid cells, **19**, 75
antimony in lead/acid cells. II. Generation and uptake of soluble antimony, **16**, 171
antimony poisoning in lead–acid batteries, **19**, 301
castability of low-antimony/lead battery alloys, **40**, 225
corrosion behaviour of low-antimony lead alloy in sulfuric acid solution, **50**, 47
the effect of ageing on the anodic corrosion of Pb–Sb alloys, **3**, 145
effect of antimony on the anodic corrosion of lead and oxygen evolution at the Pb/PbO_2/H_2O/O_2/H_2SO_4 electrode system, **23**, 331
effect of antimony on the semiconducting properties of the anodic plumbous oxide film formed in sulfuric acid solution. II. Studies of photo-

electrochemical current, **39**, 233
effect of antimony on the semiconducting properties of the anodic plumbous oxide film formed in sulfuric acid solution.I. Studies with alternating-current (a.c.) impedance, **39**, 225
effects of antimony on the electrochemical behaviour of lead dioxide in sulphuric acid, **9**, 221
effect of some elements on the performance of lead–antimony alloys for lead/acod batteries, **31**, 169
electrolyte stratification in lead/acid batteries: effect of grid antimony and relationship to capacity loss, **46**, 239
influence of antimony on the electrochemical behaviour and the structure of the lead dioxide active mass of lead/acid batteries, **42**, 71
influence of arsenic, antimony and bismuth on the properties of lead/acid battery positive plates, **30**, 117
influence of cobalt ions on the behaviour of maintenance-free lead/acid batteries with antimony alloys, **31**, 151
influence of phosphoric acid on the electrochemistry of lead electrodes in sulfuric acid electrolyte containing antimony, **46**, 1
inhibition of hydrogen evolution by antimony contaminated lead electrodes in sulfuric acid electrolyte, **28**, 381
joining of lead–antimony and lead–calcium alloy lugs by a laboratory cast-on-strap process, **46**, 311
kinetics of hydrogen evolution reaction on lead/acid battery negative plates with silicate and antimony added to the electrolyte, **30**, 169
kinetics of hydrogen-evolution reaction on lead and lead-alloy electrodes in sulfuric acid electrolyte with phosphoric acid and antimony additives, **48**, 371
lead/acid batteries with low antimony alloys, **1**, 3
low-antimony–lead alloy strip production, **38**, 59
low-antimony lead-alloy expanded grids: preliminary performance data, **42**, 47
performance of molten salt sodium/β-alumina/$SbCl_3$ cells, **3**, 201
premature capacity loss in lead/acid batteries: a discussion of the antimony-free effect and related phenomena, **36**, 567
premature capacity loss in lead/acid batteries with antimony-free grids during cycling under constant-voltage-charging conditions. 1. Characterization and causes of the phenomenon, **46**, 191
a study of the corrosion of negative-plate lead-antimony lugs in lead/acid batteries, **45**, 131
suppression of premature capacity loss by methods based on the gel–crystal concept of the PbO_2 electrode, **46**, 171
unusual effects of ammonium ligno-sulfonate on the electrochemical behaviour of lead, lead–calcium, and lead–antimony alloys, **40**, 323
Aprotic electrolytes
on the processes responsible for the degradation of the aluminium/lithium electrode used as anode material in lithium aprotic electrolyte batteries, **9**, 235
Aprotic solvents
electrolyte solvation in aprotic solvents, **26**, 9
Arsenic
influence of arsenic, antimony and bismuth on the properties of lead/acid battery positive plates, **30**, 117
$LiAsF_6$ is propylene carbonate–acetonitrile for primary lithium batteries, **10**, 13
solution of $LiAsF_6$ in 1,3-dioxolane for secondary lithium batteries, **39**, 163
the stabilization of $LiAsF_6$/1, 3-dioxolane for use in rechargeable lithium batteries, **26**, 519
Ascorbic acid
I. Kinetics of reduction of manganese dioxide by ascorbic acid and hydrazine solutions, **22**, 133
Automatic system
an automatic system for assessing the electrical performance of electrodes and batteries, **8**, 99
Automobiles
development of sealed lead/acid battery 'SB60-S4' for automobile use, **38**, 123

intelligent battery systems for automobiles, **38**, 153
Automotive applications
characteristics of valve-regulated lead/acid batteries for automotive applications under deep-discharge duty, **33**, 105
Automotive battery(ies)
automation and rationalization of the plate-stacking process for automotive, traction and stationary lead/acid batteries, **31**, 355
automotive batteries — from a single component to an entire part of the electrical system in a vehicle, **33**, 331
automotive battery energy density, **33**, 247
automotive lead/acid battery service-life: measurement and surveys, **23**, 175
continuous production of automotive lead/acid battery plates from lead–calcium–tin strip, **31**, 157
demands on automotive battery performance, what is the best alloy?, **33**, 285
development of automotive battery systems capable of surviving modern underhood environments, **42**, 237
development of a valve-regulated lead/acid battery for automotive use, **42**, 247
envelope-separator technology for lead/acid automotive batteries, **23**, 113
equipment for testing automotive lead/acid batteries under SAE J240a conditions, **7**, 391
failure mechanisms of lead/acid automotive batteries in service in the U.S.A., **33**, 257
from leaf-type to pockets: development trends in Western Europe for automotive battery separators, **38**, 103
future trends in automotive lead/acid batteries, **28**, 11
how the systems approach is determining automotive battery design and use, **42**, 185
impedance studies of inter-cell welds in automotive lead/acid batteries, **30**, 301
improvement of bench life-tests for automotive batteries, **42**, 231
intelligent automotive battery systems, **42**, 195
manufacturing trends in automotive battery manufacture, **28**, 155
microporous polyethylene separators — today and tomorrow. Separator development trends for modern automotive batteries, **42**, 211
modelling of the cold-cranking performance of automottive lead/acid batteries, **30**, 249
superiority and failure mode of automotive batteries insulated with polyethylene separators, **48**, 129
temperature-controlled formation, **33**, 275
updated status of conductance/capacity correlation studies to determine the state-of-health f automotive and stand-by lead/acid batteries, **48**, 135
Automotive battery plates
thirteen years' experience with expanded lead/calcium/tin grids for automotive battery plates, **33**, 67
Automotive electrical systems
problems with lead/acid batteries in automotive electrical systems, **23**, 157
Auxiliary electrodes
a new type of auxiliary electrode for alkaline zinc cells, **23**, 351

Ball-mill process
a comparison of Barton-pot and ball-mill processes for making leady oxide, **19**, 157
Barium
high rate molten salt cells employing barium nickel sulfide cathodes, **37**, 325
high-temperature superconductor **40**, 361
oxygen ion conductionin pure and yttria-doped barium cerate, **14**, 295
solid electrolyte interphase (SEI) electrodes. Part VII. The electrochemical behaviour of calcium in $Ba(AlCl_4)_2$ and $Sr(AlCl_4)_2$-thionyl chloride solutions (extended abstract), **26**, 423
Barodynamic characteristics
a correlation between porous structure of the separator and barodynamic characteristics of sealed lead/acid accumulators, **39**, 179
Barton oxides
X-ray diffraction analysis of Barton oxides, **15**, 77
Barton-pot equipment

improvements to Barton-pot equipment for manufacturing leady oxide, **31**, 351
Barton-pot process
a comparison of Barton-pot and ball-mill processes for making leady oxide, **19**, 157
Battery applications
solid lithium ion conductors for battery applications, **14**, 105
Battery cathodes
the molybdenum trioxide doped manganese dioxide electrode. I. Use as low temperature battery cathodes, **1**, 65
Battery chemicals
manganese dioxide – A review of a battery chemical. Part I. Chemical syntheses and X-ray diffraction studies of manganese dioxides, **15**, 209
manganese dioxide – A review of a battery chemical. Part II. Solid state and electrochemical properties of manganese dioxides, **16**, 1
Battery data
battery data for use in expert systems, **17**, 171
Battery dry room facility
battery dry room facility. Relationship between the dry room parameters and the moisture control unit (extended abstract), **26**, 603
Battery elecrodes
a new method for examining mixtures of two crystalline varieties of a metal oxide for positive battery electrodes, **8**, 121
Battery electrics
battery electrical needs for the next generation of cars, **33**, 291
Battery electrolytes
kinetic barriers to the preferred electrode process in subzero battery electrolytes, **8**, 83
Battery enclosure
heat loss measurements on an enclosure for high temperature batteries, **9**, 11
Battery grids
ageing behaviour of cast Pb/Sb battery grids, **4**, 53
calcium products for battery grid production: a supplier's perspective, **23**, 73
lead–strontium alloys for battery grids, **2**, 337
present trends in lead alloys for the manufacture of battery grids – a review, **1**, 301
Battery industry
the ASEAN Free-Trade Area and its implications on the battery industry, **48**, 7
changing corporate culture within the European lead/acid battery industry, **48**, 39
lithium metal for the battery industry, **5**, 127
regulatory trends in the battery industry, **48**, 29
a vision for the Asian battery industry, **38**, 3
Battery internal resistance
a new technique for determining battery internal resistance: studies on Leclanché cells, **7**, 267
Battery life
accelerated cycle life testing of lead/acid golf car batteries and the influence of separator type on battery life, energy consumption and operating cost, **10**, 137
Battery lifetime
battery lifetime prediction by pattern recognition. Application to lead/acid battery life-cycling test data, **13**, 23
Battery management system
a high reliability battery management system, **18**, 223
Battery manufacture
age-hardening of grid alloys and its effect on battery manufacturing processes, **38**, 49
aspects of lead/acid battery manufacture and performance, **48**, 257
Battery monitoring
battery monitoring and integrity testing of large lead/acid storage batteries, **17**, 203
Battery oxide
aspects of lead/acid battery technology. 8. Battery oxide, **47**, 197
Battery oxide production
new developments in battery oxide production, **38**, 75
Battery packaging
materials testing package for batteries and energy conversion

systems, **20**, 81
Battery pastes
computer model for battery paste calculations, **28**, 127
modern technology for the preparation of battery paste, **48**, 71
Battery performance
battery performance enhancement with additions of bismuth, **48**, 113
monitoring battery performance in remote-area power-supply (RAPS) systems, **35**, 421
Battery plates
the mechanism of the formation of positive battery plates from pure lead. 1. Cyclic voltammetry, **6**, 83
Battery requirements
battery requirements for electric vehicles, **45**, 61
Battery solvents
application of non-aqueous solvents to batteries, **11**, 135
Battery storage test facility
a battery storage test facility for load frequency control and instantaneous reserve, **17**, 267
Battery System Program Plan
NASA Aerospace Flight Battery System Program Plan, **21**, 177
Battery systems
battery systems for electric vehicles - a state-of-the-art review, **4**, 101
intelligent battery systems for automobiles, **38**, 153
a new high energy density battery system **18**, 377
polyphase alloys as rechargeable electrodes in advanced battery systems, **22**, 341
on the suppression of self discharge of the zinc electrodes of zinc/air cells and other related battery systems, **10**, 197
Battery technology
aspects of lead/acid battery technology. 9. Grids, **50**, 193
energy storage and the environment: the role of battery technology, **42**, 1
new battery technologies and their potential impact in the use of energy in the telephone industry, **4**, 291
a view of the future of batteries, **11**, 127
Battery test facility
data acquisition and control instrumentation of the BEWAG battery test facility, **17**, 201
Battery testing
advanced secondary battery development and testing. A Canadian perspective, **17**, 42
application testing of batteries for utility load leveling and customer applications at the Battery Energy Storage Test (BEST) facility, **17**, 90
autonormalization of battery test data to significantly reduce impact of battery aging on test results, **17**, 107
battery developement and testing at the European Space Agency, **21**, 241
battery testing in Germany, **17**, 46
BCI cycle life testing procedures for deep-cycle lead/acid batteries, **17**, 152
cell and battery test methods **17**, 143
circulating electrolyte zinc/bromine battery. Test program and procedures, **17**, 135
flowing electrolyte batteries. Test methods and results, **17**, 127
overview of advanced secondary battery testing in Britain, **17**, 53
overview of Australian lead/acid battery test programmes, **17**, 27
overview of rechargeable battery testing in Japan, **17**, 55
overview of rechargeable battery testing in the United States, **17**, 64
performance testing of advanced lead/acid batteries for electric vehicles, **17**, 144
quality test of lead accumulators, especially of maintenance-free, sealed lead batteries with immobilized electrolyte, **17**, 160
rationale and methodology for group testing of electric vehicle batteries, **17**, 97
requirements fr EV-batteries and consequences for test procedures, **17**, 75
testing methods for lithium molybdenum disulfide intercalation batteries, **17**, 153
test programs at the National Battery Test Laboratory, **17**, 81
use of computer network to achieve testing flexibility, **17**, 207
utility requirements for battery energy storage and their effects on battery

test programs, **17**, 88
Battery-to-battery charge
fast battery-to-battery charge, **21**, 91
Benzotriazole
effect of benzotriazole on the electrochemical behaviour of cadmium in alkaline solutions, **34**, 313
Beta-alumina
beta-alumina electrolyte for use in sodium/sulfur batteries. Part 1. Fundamental properties, **6**, 143
beta-alumina electrolyte for use in sodium/sulfur batteries. Part 2. Manufacture and use, **7**, 45
determination of the life properties of beta-alumina tubes, **3**, 23
the development of beta-alumina for use in electrochemical cells: a survey, **3**, 1
performance of molten salt sodium/β-alumina/$SbCl_3$ cells, **3**, 201
rapid testing of beta alumina ceramics, **17**, 188
a room temperature β-alumina primary cell employing sodium–potassium alloy as anodic reactant, **3**, 191
Bismuth
battery performance enhancement with additions of bismuth, **48**, 113
behaviour of $AgBi(Cr_2O_7)_2$ as a possible cathode for lithium cells, **10**, 63
bismuth oxide as an additive in pasted zinc electrodes, **15**, 169
button cells based on the Li/Bi_2O_3 couple, **16**, 263
development of new alloys of commercial aluminium (2S) with zinc, indium, tin, and bismuth as anodes for alkaline batteries, **27**, 235
effect of bismuth on the corrosion behaviour of lead in sulfuric acid, **36**, 57
effects of bismuth on the electrochemical performance of lead/acid batteries, **28**, 69
a guide to the influence of bismuth on lead/acid battery performance, **45**, 365
the hydrogen evolution reaction on lead-bismuth alloys, **22**, 11
influence of arsenic, antimony and bismuth on the properties of lead/acid battery positive plates, **30**, 117
influence of bismuth on the corrosion of lead in 5 M H_2SO_4, **34**, 369
Li–$AgBi(CrO_4)_2$: a new highly reliable lithium battery for long service life applications, **9**, 339
plastic-bonded electrodes for nickel/cadmium accumulators. IX. Oxygen recombination rate on plastic-bonded cadmium electrodes with different active materials, **8**, 273
primary 1.5 V lithium cells with $BiVO_4$ cathodes, **27**, 29
Blistering
a discussion of the causes of blistering of sintered nickel hydroxide electrodes, **6**, 327
Bonding and filling agents
influence of bonding and filling agents on the activity of tungsten carbide hydrogen electrodes, **1**, 277
Boron
$(Ag_2O)_x(Li_2O)_{1-x}2B_2O_3$ mixed cation glasses, **9**, 379
electrical conductivity of a new solid electrolyte glass material Li_2O–$LiNbO_3$–B_2O_3, **13**, 151
an electrochemical study of PEO:$LiBF_4$-glass composite electrolytes, **47**, 63
new negative electrode matrix, BC_2N, for rechargeable lithium batteries, **43**, 75
Bromine
advanced hydrogen electrode for a hydrogen/bromine battery, **22**, 293
application of non-aqueous solvents to batteries. Part I. Physicochemical properties of propionitrile/water tow-phase solvent relevant to zinc/bromine batteries, **10**, 309
an approximate model for estimating the faradaic efficiency loss in zinc/bromine batteries caused by cell self-discharge, **50**, 343
circulating electrolyte zinc/bromine battery. Test program and procedures, **17**, 135
determination of the heat capacities of Lithium/BCX (bromine chloride in thionyl chloride) batteries, **28**, 269
Li/SO_4 rechargeable cells containing added bromine, **21**, 143
performance analysis of zinc/bromine batteries in vehicle and utility applications, **5**, 173

performance of zinc/bromine cells having a propionitrile electrolyte, **23**, 365
preparation and performance of plastic-bonded-carbon bromine electrodes, **19**, 337
selection of quaternary ammonium bromides for use in zinc/bromine cells, **18**, 349
simulation studies on the performance of the hydrogen electrode bonded to proton exchange membranes in the hydrogen/bromine fuel cell, **28**, 301
some properties of zinc/bromine battery electrolytes, **16**, 53
theoretical performance of a hydrogen/bromine rechargeable SPE fuel cell, **22**, 423
thermodynamic determinations for lithium/thionyl chloride and lithium/BrCl–thionyl chloride cells as a function of temperature and depth of discharge, **24**, 229
zinc/bromine battery for energy storage, **35**, 405

Button cells
button cells based on the Li/Bi_2O_3 couple, **16**, 263
limitations in the use of plastic-bonded electrodes in sealed nickel/cadmium cells and their reasons. II. Button cells, **21**, 67
the lithium/manganese dioxide cell. III. A comparison of electrolytic and chemical MnO_2 in lithium button cells at high discharge rates, **27**, 261
optimizing the parameters of cell expansion in alkaline manganese dioxide button cells, **32**, 9
reliability of commercial lithium button cells. I. Effect of the environment on the passivation resistance, **25**, 49
reliability of commercial lithium button cells. II. Effect of the state-of-discharge and environment on the passivation resistance, **25**, 61
self-discharge of low-mercury zinc/silver-oxide button cells, **22**, 163

Cactus stems
cactus (*Opuntia dillenii* Grahm) stem: a new source of energy, **47**, 185

Cadmium
advanced nickel/cadmium batteries for geosynchronous spacecraft, **22**, 243
an advanced nickel/cadmium battery cell design, **18**, 155
aerospace nickel/cadmium cell separator qualification program, **18**, 147
on the anomalous behaviour of deeply discharged **8**, 403
cadmium — a review of the recent literature, **18**, 43
a cadmium sulfide/solid electrolyte photoelectrochemical solar cell, **24**, 121
characterization of cadmium-doped copper indium sulfide films prepared by a two-step technique, **35**, 305
chemical impregnation and sinter corrosion in plaques for nickel/cadmium cells, **28**, 247
a computer-controlled discharge unit for the testing of nickel/cadmium cells and batteries, **16**, 119
current distribution in lead/acid and nickel/cadmium accumulators, **27**, 45
degradation in nickel/cadmium cells studied by impedance measurements, **12**, 289
the design and applicationof nickel/cadmium batteries in space, **15**, 119
design, development, performance, and reconditioning of Ni/Cd batteries using polypropylene separators, **12**, 305
earth radiation budget satellite (ERBS) orbiting profiles and Ni/Cd use, **21**, 291
the effect of additives on the anodic behaviour of cadmium in KOH solutions, **18**, 33
effect of benzotriazole on the electrochemical behaviour of cadmium in alkaline solutions, **34**, 313
effect of Cd, Ni, Zn, and Co ions on electrode reactions of the lead/acid battery, **32**, 43
effects of long term storage on aerospace nickel/cadmium cell performance, **21**, 297
electrochemical method for improving the spectral response of CdS/Cu_2S heterojunctions, **13**, 85
electrode kinetics of a nickel/cadmium cell and failure-mode prediction. Estimation of equivalent resistance of an internal short, **19**, 67

electrolyte fill quantity and limiting capacity in sealed nickel/cadmium cells, **32**, 19
estimation of the pressure in hermetic Ni/Cd accumulator from its low-frequency impedance, **34**, 323
a failure model for sealed nickel/cadmium batteries, **8**, 369
a flooded–starved design for nickel/cadmium cells, **18**, 161
impedance of nickel/cadmium cells with nylon separator hydrolysate, **50**, 375
impedance peaks of sealed nickel/cadmium cells at low states-of-charges, **37**, 335
impedance studies of nickel/cadmium and nickel/hydrogen cells using the cell case as a reference electrode, **29**, 467
internal impedance of nickel/cadmium batteries with applications to space, **38**, 295
investigation of long term storage effects on aerospace nickel/cadmium cell performance, **18**, 191
limitations in the use of plastic-bonded electrodes in sealed nickel/cadmium cells and their reasons. II. Button cells, **21**, 67
limitations in the use of plastic-bonded electrodes in sealed nickel/cadmium cells and their reasons. I. Prismatic and cylindrical cells, **21**, 9
mathematics of coiling in cylindrical electrochemical cells: the theory of a spiral bounded by two circles and its application to the spiral-wound nickel/cadmium cell, **3**, 311
measurement of the tortuosity factor of Ni/Cd battery electrodes by an improved conductivity method, **3**, 167
migration of soluble cadmium species in nickel/cadmium cells, **3**, 175
modeling nickel/cadmium performance: planned alternations to the Goddard battery model, **18**, 179
a nickel/cadmium cell residual charge analyser, **13**, 75
NOAA 26.5 A h LEO characterization test, **18**, 209
optimisation of active material for positive electrodes of Ni/Cd accumulators, **8**, 9
oxygen reduction rate at teflon-bounded cadmium electrodes in sealed nickel/cadmium accumulators, **25**, 1
plastic-bonded electrodes for nickel/cadmium accumulators. I. Cadmium electrode, **4**, 227
plastic-bonded electrodes for nickel/cadmium accumulators. II. Basic electrochemical parameters of the nickel oxide electrode, **4**, 239
plastic-bonded electrodes for nickel/cadmium accumulators. III. Influence of active layer composition on galvanostatic and potentiostatic discharge curves, **4**, 349
plastic-bonded electrodes for nickel/cadmium accumulators. IV. Some specific problems of the positive active layer, **5**, 207
plastic-bonded electrodes for nickel/cadmium accumulators. VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, 7.113
plastic-bonded electrodes for nickel/cadmium accumulators. VIII. Study of oxygen recombination rate on plastic-bonded cadmium electrodes provided with active carbon catalyst, **8**, 3
plastic-bonded electrodes for nickel/cadmium accumulators. V. Influence of the current collector and mechanical co pression on the current carrying capability of the nickel oxide electrode, **6**, 161
plastic-bonded electrodes for nickel/cadmium accumulators. VI. Oxygen recombination rate on sealed cell cadmium electrodes, **7**, 65
plastic-bonded electrodes for nickel/cadmium accumulators. X. The nature of the second discharge step of nickel oxide elecrodes, **8**, 351
preliminary evaluation of nickel/cadmium cells for a totally implantable ventricular assist device, **39**, 67
protection of sealed Ni/Cd cells from cell voltage reversal. I. Experimental conditions for the formation of cadmium bridges, **14**, 285
protection of sealed nickel/cadmium cells against cell voltage reversal. II. Influence of the separator on the formation of cadmium

bridges, **16**, 253
qualification testing of General Electric 50 A h nickel/cadmium cells with new separator and new positive-plate processing, **18**, 135
qualification testing of General Electric 50 A h nickel/cadmium cells with Pellon 2536 separator and passivated positive plates, **21**, 313
real time charge efficiency monitoring for nickel electrodes in nickel/cadmium and nickel/hydrogen cells, **21**, 327
sealed Ni/Cd cells: the temperature behaviour of electrodes in excess of electrolyte, **6**, 1
self-discharge characteristics of spacecraft nickel/cadmium cells at elevated temperatures, **18**, 169
statistically determined nickel/cadmium performance relationships, **21**, 333
studies on polycrystalline cadmium sulfide photoanodes, **24**, 329
studies on the storage of elecrochemically impregnated nickel/cadmium cells, **50**, 81
temperature dependence of hydrogen evolution reaction on nickel oxide electrode in sealed nickel/cadmium cells, **45**, 247
test summary for advanced hydrogen cycle nickel/cadmium cell, **21**, 339
thermal simulation of NiCd batteries for spacecraft, **2**, 147
void volume consideration in evaluating the capacity of nickel/cadmium cells with sintered electrodes, **25**, 159
voltage–temperature charge verification testing of 34 ampere hour nickel/cadmium cells, **18**, 197

Cadmium electrodes
the behaviour of polyvinyl alcohol at the planar $Cd/Cd(OH)_2$ electrode interface, **23**, 341
effect of iron addition to the cadmium electrode, **32**, 55
oxygen recombination rate on plastic-bonded cadmium electrodes doped with nickel(II) hydroxide, **19**, 55
oxygen reduction rate at teflon-bounded cadmium electrodes in sealed nickel/cadmium accumulators, **25**, 1
photoelectrochemical studies on polycrystalline CdS (chemical bath deposition) and CdSe (chemical bath and electro deposition) thin film electrodes, **13**, 159
plastic-bonded electrodes for nickel/cadmium accumulators. I. Cadmium electrode, **4**, 227
plastic-bonded electrodes for nickel/cadmium accumulators. VI. Oxygen recombination rate on sealed cell cadmium electroes, **7**, 65
plastic-bonded electrodes for nickel/cadmium accumulators. VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, **7**, 113

Cadmium sulfide electrodes
photoelectrochemical study of screen-printed cadmium sulfide electrodes, **24**, 41

Calcium
age hardening of a Pb–0.1wt.%Ca–0.3wt.%Sn alloy and the effects of heat during battery manufacturing on this process, **42**, 35
application of wrought lead/calcium batteries in Europe, **33**, 87
behaviour of lead–calcium alloys in positive plates of flooded and recombinant lead/acid batteries, **33**, 59
calcium/$Ca(AlCl_4)_2$–thionyl chloride (TC) cell. Effect of temperature and cell parameters on performance, **14**, 93
calcium products for battery grid production: a supplier's perspective, **23**, 73
casting technology for lead–calcium grids, **19**, 143
in situ Raman spectra of the discharge products of calcium and lithium-anoded thionyl chloride cells – sulfur dioxide generation in oxyhalide systems, **34**, 1
continuous production of automotive lead/acid battery plates from lead–calcium–tin strip, **31**, 157
discontinuous and continuous hardening processes in calcium and calcium–tin microalloyed lead: influence of 'secondary-lead' impurities, **33**, 27
electrochemical investigation of lead-calcium alloys in sulfuric acid, **21**, 151
electrochemical studies on a zinc–lead–cadmium alloy in aqueous ammonium chloride solution, **47**, 177

formation of wrought lead/calcium batteries for consistency, **33**, 77
improved grid alloys for deep-cycling lead/calcium batteries, **33**, 13
influence of calcium sulfate in the positive material on the discharge performance of lead/acid batteries, **35**, 83
interactions of SO_2 with $Ca(AlCl_4)_2$–SO_2Cl_2 electrolyte: Raman studies, **25**, 187
joining of lead–antimony and lead–calcium alloy lugs by a laboratory cast-on-strap process, **46**, 311
lead–calcium alloys in the production of lead/acid batteries, **33**, 51
new aspects of the solid phase equilibria in the ternary Pb–Sn–Ca system for $x_{Ca} \leqslant 25$ at.%, **46**, 299
a new lead–calcium alloy for maintenance-free lead/acid batteries, **31**, 163
performance of lithium alloy/lithium and calcium/lithium anodes in thionyl chloride cells, **15**, 239
phenomena at the interface between positive active material and lead/calcium/tin grids, **30**, 23
the problem of maintaining Ca concentration in Pb–Ca alloys for grid casting, **3**, 367
reduction of calcium corrision in thionyl chloride-based electrolyte, **28**, 361
solid electrolyte interphase (SEI) electrodes. Part VI: Calcium/$Ca(AlCl_4)_2$/sulfuryl chloride system, **10**, 125
solid electrolyte interphase (SEI) electrodes. Part VII. The electrochemical behaviour of calcium in $Ba(AlCl_4)_2$ and $Sr(AlCl_4)_2$-thionyl chloride solutions (extended abstract), **26**, 423
a system evaluation of lead/acid battery chargers. Part II. Cells with cast lead/calcium grids, **2**, 317
techniques to reduce failure in lead/calcium batteries using expanded type grids, **42**, 221
thirteen years' experience with expanded lead/calcium/tin grids for automotive battery plates, **33**, 67
unusual effects of ammonium ligno-sulfonate on the electrochemical behaviour of lead, lead–calcium, and lead–antimony alloys, **40**, 323

Calcium/alloy grids
analysis of the conditions that promote passivation on calcium–alloy grids in lead/acid batteries, **36**, 451
Calcium/thionyl chloride cells
calcium thionyl chloride cells: anode studies at low temperatures, **25**, 13
performance of calcium/thionyl chloride cells containing $Sr(AlCl_4)_2$ electrolyte, **28**, 295
Calcium/thionyl chloride systems
comparison of the behaviour of the Li/$SOCl_2$ and Ca/$SOCl_2$ systems at elevated temperatures, **28**, 325
Calorimetry
safety study of electrolyte solutions for lithium batteries by accelerating-rate calorimetry, **44**, 523
Capacitance
electrochemical determination of the anode film resistance and double layer capacitance in magnesium/manganese dioxide dry cells, **15**, 27
quantity analysis of reserve-type silver oxide/zinc baterries by capacitance and phase-angle measurements, **2**, 165
Capacitors
advanced double layer capacitors, **29**, 355
electric double-layer capacitors using porous and electrically conducting clay–carbon composites as electrodes, **32**, 165
limiting factors for carbon-based chemical double-layer capacitors, **47**, 303
Capacity
aspects of lead/acid battery technology. 6. Designing for capacity, **46**, 73
aspects of lead/acid battery technology. 7. Separators, **46**, 117
capacity–cycle life behavior in secondary lithium cells, **14**, 53
the capacity limiting role of the electronic conductivity of the active material in lead/acid batteries during discharge, **7**, 281
capacity of zinc/mercuric oxide cells, **3**, 359
crystal growth of PbO_2 and its relation to the capacity loss of positive plates in seald lead/acid batteries, **30**, 13
determination of discharge time and capacity by short-period discharge

method, **30**, 257
effect of corrosion layer on phenomena that cause premature capacity loss in lead/acid batteries, **48**, 179
effect of overcharge on capacity below 1 V of nickel/hydrogen cells, **21**, 45
effects of grid alloy on the properties of positive-plate corrosion layers in lead/acid batteires. Implications for premature capacity loss under repetitive deep-discharge cycling service, **48**, 195
electrolyte fill quantity and limiting capacity in sealed nickel/cadmium cells, **32**, 19
electrolyte stratification in lead/acid batteries: effect of grid antimony and relationship to capacity loss, **46**, 239
estimation of the residual capacity of maintenance-free lead/acid batteries. Part 1. Identification of a parameter for the prediction of state-of-charge, **27**, 287
influence of crystal and gel zones on the capacity of the lead dioxide active mass (extended abstract), **40**, 169
the influence of pulsed discharge on the capacity of lead/acid batteries, **12**, 71
location of the phenomena of premature capacity loss during cycling of lead/acid batteries with lead grids, **46**, 203
a new equation for the limiting capacity of the lead/acid cell, **35**, 97
nickel–hydrogen capacity loss on storage, **29**, 541
premature capacity loss in lead/acid batteries: a discussion of the antimony-free effect and related phenomena, **36**, 567
premature capacity loss in lead/acid batteries with antimony-free grids during cycling under constant-voltage-charging conditions. 1. Characterization and causes of the phenomenon, **46**, 191
premature capacity-loss mechanisms in lead/acid batteries, **40**, 125
premature capacity loss (PCL) of the positive lead/acid battery plate: a new concept to describe the phenomenon, **42**, 345
relationship of cathode pore size distribution and rated capacity in Li/MnO_2 cells, **44**, 709
the residual capacity estimation of fully sealed 25 A h lead/acid cells, **17**, 305
reversible capacity decay of PbO_2 electrodes influence of high rate discharges and rest times, **40**, 157
reversible capacity decay of positive electrodes in lead/acid cells, **33**, 231
suppression of premature capacity loss by methods based on the gel–crystal concept of the PbO_2 electrode, **46**, 171
updated status of conductance/capacity correlation studies to determine the state-of-health f automotive and stand-by lead/acid batteries, **48**, 135
void volume consideration in evaluating the capacity of nickel/cadmium cells with sintered electrodes, **25**, 159

Capacity limiting process
sulfate passivation in the lead/acid system as a capacity limiting process, **8**, 159

Capacity rating system
a capacity rating system for cardiac pacemaker batteries, **5**, 25

Carbides
adsorption behaviour in the gas phase of carbides prepared from different starting materials, **7**, 257

Carbon–Teflon plaque
investigation of carbon–Teflon plaque resistivities, **6**, 185

Carbon
electric current from the direct conversion of low molecular weight C, H, O-compounds, **1**, 141
electrochemical properties of active carbon in acid and alkaline electrolytes, **1**, 285
high voltage, rechargeable lithium batteries using newly-developed carbon for negative electrode material, **43**, 233
improvement of heavy-drain discharge properties of polypyrrole cathode by the electro-codepositionof carbon powder, **44**, 611
limiting factors for carbon-based chemical double-layer capacitors, **47**, 303
optimization of the pyrolysis temperature of active carbon–CoTMPP cata-

lysts for air electrodes in alkaline media, **17**, 345
plastic-bonded electrodes for nickel/cadmium accumulators. VIII. Study of oxygen recombination rate on plastic-bonded cadmium electrodes provided with active carbon catalyst, **8**, 3
a rechargeable $Zn/ZnCl_2$, NH_4Cl/polyaniline/carbon dry battery, **45**, 153
studies on an aluminium/carbon cell, **50**, 187
studies of carbon as negative electrode materials for secondary lithium batteries, **44**, 399
Carbon/air electrodes
influence of structure and hydrophobic properties on the characteristics of carbon/air elecrodes, **8**, 17
on the problem of ageing of carbon/air electrodes in alkaline electrolytes, **5**, 189
Carbon anodes
an update of the Li metal-free rechargeable battery based on $Li_{1+x}Mn_2O_4$ cathodes and carbon anodes, **44**, 689
Carbonate ions
effect of carbonate ions on the behaviour of zinc in 30% KOH, **34**, 381
Carbon black cathodes
the lithium/sulfur dioxide cell I. The porous carbon black cathode, **6**, 337 II. Material balance, **6**, 447
Carbon carriers
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as catalysts for the electrochemical reduction of oxygen in acid electrolytes, **13**, 217
Carbon catalysts
on the effect of various active carbon catalysts on the behaviour of carbon gas-diffusion air electrodes. I. Alkaline solutions, **1**, 35
on the effect of various active carbon catalysts on the behaviour of carbon gas-diffusion air electrodes. II. Acid solutions, **1**, 47
Carbon cathodes
influence of macrocyclic compounds on the electrochemical reduction of thionyl chloride at glassy carbon cathodes, **36**, 127
Carbon dioxide
a novel Pd–Ag membrane anode for alkaline fuel cells suitable for CO_2-containing hydrogen, **45**, 93
Carbon electrodes
the a.c. response of lithium, stainless steel, and porous carbon electrodes in thionyl chloride solutions, **14**, 123
carbon-based electrodes carrying platinum-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, **19**, 279
carbon as negative electrodes in lithium secondary cells, **26**, 535
development and evaluation of platinum–ruthenium bimetal catalyst-based carbon electrodes for hydrogen/oxygen fuel cells in NaOH media, **45**, 139
effect of silver, copper and palladium additives on the performance of carbon electrodes in an $Li/SOCl_2$ system, **16**, 233
electric double-layer capacitors using porous and electrically conducting clay–carbon composites as electrodes, **32**, 165
electrochemical measurements and surface studies on acid oxygen carbon electrodes by the use of the ESCA method, **2**, 183
electrochemical and spectroscopic studies of carbon electrodes in lithium battery electrolyte systems, **43**, 47
electrochemical study of the passivating layer on lithium intercaleted carbon elctrodes in nonaqueous solvents, **43**, 65
hairy carbon electrodes studied by cyclic voltammetry and battery discharge testing, **47**, 313
high-performance platinized carbon electrodes for oxygen reduction in power sources with alkaline electrolytes, **13**, 273
influence of the electrolyte content of oxygen carbon gas-diffusion electrodes on their electrochemical performance in acid solutions, **3**, 245
inorganic film-forming electrolyte additives improving the cycling behaviour of metallic lithium electrodes and the self-discharge of carbon/lithium electrodes, **44**, 413

lithium-ion rechargeable cells with $LiCoO_2$ and carbon electrodes, **43**, 241
macrokinetic study of thionyl chloride reduction on porous carbon electrodes, **26**, 427
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, **46**, 61
oxygen-reducing porous carbon electrode for electrochemical power sources with alkaline electrolytes, **10**, 333
plasticized carbon electrodes of interest for lithium rocking chair batteries, **45**, 333
preparation and performance of plastic-bonded-carbon bromine electrodes, **19**, 337
rechargeable lithium battery based on pyrolytic carbon as a negative electrode, **26**, 545
simplex optimization of carbon electrodes for the hydrogen/oxygen membrane fuel cell, **1**, 323
stability of lithiated carbon electrodes in organic electrolytes, **44**, 409
Carbon fluoride
discharge characteristics of a lithium battery with fibrous carbon fluoride, **20**, 99
Carbon/lithium anodes
carbon/lithium anodes for lithium secondary batteries, **39**, 185
Carbon/lithium electrodes
phase changes and diffusivity in the carbon/lithium electrode, **25**, 151
Carbon materials
influence of metal ions on the electrocatalytic oxygen reduction of carbon materials prepared from pyrolyzed polyacrylonitrile, **38**, 327
Carbon/metal oxide cells
the SWING system, a nonaqueous rechargeable carbon/metal oxide cell, **43**, 223
Carbon monofluoride
evaluation of cathode materials for the lithium/carbonmonofluoride battery, **5**, 111
performance characteristics of Li/MnO_2–CF_x hybrid cathode jellyroll cells, **19**, 325
Cardiac pacemaker batteries
a capacity rating system for cardiac pacemaker batteries, **5**, 25
Car manufacture
design-in – working with the car manufacturers, **38**, 161
Carrier materials
influence of carrier material on catalytic activity of double layer diffusion electrodes for reduction of oxygen in acidic electrolytets, **2**, 361
Cars
battery electrical needs for the next generation of cars, **33**, 291
electronics in cars: consequences for the energy-supply system, **33**, 319
Casing materials
casing materials for sodium/sulfur cells, **3**, 227
Castability
castability of low-antimony/lead battery alloys, **40**, 225
Casting
solidification and mould-flow analysis of the casting of grids for lead/acid batteries, **23**, 79
Casting technology
casting technology for lead–calcium grids, **19**, 143
Catalysts
carbon-based electrodes carrying platinum-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, **19**, 279
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, **46**, 17
cobalt and cobalt-based macrocycle blacks as oxygen-reduction catalysts in alkaline fuel cells, **45**, 219
composite fiber structures for catalysts and electrodes, **47**, 297
corrosion of platinum catalyst in alkaline solutions, **8**, 301
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as catalysts for the electrochemical reduction of oxygen in acid electrolytes, **13**, 217
an investigation of the oxygen cathode with a silver catalyst polarized in the region of negative potentials, **7**, 105

noble metal-free catalysts for the hydrogen/oxygen recombination in sealed lead/acid batteries using immobilized electrolytes, **40**, 175
optimization of the pyrolysis temperature of active carbon–CoTMPP catalysts for air electrodes in alkaline media, **17**, 345
plastic-bonded electrodes for nickel/cadmium accumulators. VIII. Study of oxygen recombination rate on plastic-bonded cadmium electrodes provided with active carbon catalyst, **8**, 3
studies of advanced catalysts for Li/$SOCl_2$ cells, **26**, 597
tetrathiafulvalenes as catalysts for the reduction of oxygen in acid electrolytes, **6**, 193
Catalytic activity
corrosion resistance and catalytic activity of tungsten carbide in phosphoric acid, **11**, 1
the effect of method of preparation on the catalytic activity of tungsten carbide, **4**, 65
the effect of the method of preparation on the catalytic activity of tungsten carbide for hydrogen evolution, **5**, 197
the effect of method of preparation on the corroision resistance and catalytic activity during corrosion of tungsten carbide. I. Corrosion resistance of tungsten carbide in sulfuric acid, **5**, 273
the effect of method of preparation on the corroision resistance and catalytic activity during corrosion of tungsten carbide. II. Changes in the catalytic activity of tungsten carbides during the corrosion process, **5**, 283
Catalytic decomposition
II. Kinetics of the catalytic decomposition of hydrogen peroxide solution by manganese dioxide samples, **22**, 149
Catalytic properties
on the catalytic properties of mixed oxides for the electrochemical reduction of oxygen, **32**, 253
Cathode materials
anatase as a cathode material in lithium–organic electrolyte rechargeable batteries, **6**, 261
application of FeOCl derivatives as cathode materials for a secondary lithium battery. II. Comparison of the discharge and charge characteristics of γ-FeOOH prepared from the intercalation compound of FeOCl and 4-aminopyridine with those of FeOOH intercalated with aniline (a-FeOOH(AN)), **40**, 291
behaviour of various cathode materials for nonaqueous lithium cells, **9**, 329
chemically desodiated thiochromites as cathode materials in secondary lithium cells, **26**, 285
defect thiospinels: a new class of reversible cathode material, **26**, 277
development and characterization of novel cathode materials for molten carbonate fuel cell, **49**, 227
discharge characteristics of lithium/molten nitrate thermal battery cells using silver salts as solid cathode materials, **16**, 243
evaluation of cathode materials for the lithium/carbonmonofluoride battery, **5**, 111
lead oxides as cathode materials for voltage-compatible lithium cells, **18**, 63
lithium gaphitic oxide cells. Part V. An all-solid-state battery using graphite oxide as active cathodic material, **26**, 529
lithium/graphitic oxide cells. Part II: high specific surface area graphitic oxide as cathode material for lithium batteries, **14**, 99
the M–O–X transition metal oxyhalides: a new class of lamellar cathode material, **3**, 137
mono methyl substituted *m*-dinitrobenzene compounds as cathode materials in magnesium batteries, **25**, 295
titanium disulfide as a cathode material in lithium batteries – a review, **6**, 307
V_6O_{13} as cathode material for lithium cells, **14**, 235
Cathodic materials
an investigation on various cathodic materials in copper solid-state power sources, **1**, 57
plastic-bonded electrodes for nickel/cadmium accumulators. IX. Oxygen re-

combination rate on plastic-bonded cadmium electrodes with different active materials, **8**, 273
Cathodic performance
cathodic performance of some sulfide electrodes in liquid ammonia, **3**, 157
Cathodic properties
improvement of solid electrolyte conductivity and cathodic properties of the $Li|LiI \cdot H_2O(SiO_2)|PbI_2$ electrochemical cell, **38**, 345
Cathodic protection system
photovoltaic-powered regulated cathodic protection system, **50**, 27
Cation glasses
$(Ag_2O)_x(Li_2O)_{1-x}2B_2O_3$ mixed cation glasses, **9**, 379
Cationic transport numbers
cationic transport numbers in polyether-based networks containing lithium salts, **14**, 27
Cell designs
analyzing cell designs by computer for optimum performance. A technical note, **4**, 321
Cell parameters
calcium/$Ca(AlCl_4)_2$–thionyl chloride (TC) cell. Effect of temperature and cell parameters on performance, **14**, 93
Cell reversals
modeling the occurrences of cell reversals in long strings of lead/acid cells, **41**, 277
Cell voltage reversal
protection of sealed Ni/Cd cells from cell voltage reversal. I. Experimental conditions for the formation of cadmium bridges, **14**, 285
protection of sealed nickel/cadmium cells against cell voltage reversal. II. Influence of the separator on the formation of cadmium bridges, **16**, 253
Ceramics
oxygen transport and exchange in oxide ceramics, **49**, 1
Characterization test
NOAA 26.5 A h LEO characterization test, **18**, 209
Charge–discharge
charge–discharge behaviour of lead/mercury cell in aqueous sulphuric acid, **35**, 183
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, **41**, 99
the effect of nicotinamide on the charge/discharge behavior of PbO_2 electrode in sulfuric acid solution, **39**, 43
reference-electrode and gassing studies of lead/acid charge–discharge processes, **31**, 93
surface modification of metal hydride negative electrodes and their charge/discharge performance, **38**, 335
Charge
statistical analysis of the error function in the determination of the state-of-charge in lead/acid batteries, **39**, 95
Charge acceptance
a study of the low-temperature charge acceptance of 500 A h photovoltaic batteries: laboratory and field tests, **32**, 151
Charged open-stand
effects of charged open-stand in nickel/hydrogen cells, **50**, 383
Charge efficiency
real time charge efficiency monitoring for nickel electrodes in nickel/cadmium and nickel/hydrogen cells, **21**, 327
real-time charge efficiency monitoring and on-charge gas evolution in tall lead-acid traction cells, **27**, 155
Charge rate
effect of charge rate on instantaneous charge efficiency of nickel/hydrogen cells, **37**, 419
Charge transfer complex cathodes
electrochemical performance of silver/molybdotungstate-amorphous-electrolyte cells with charge-transfer-complex cathodes, **25**, 287
Charge transfer complexes
lithium/iodine batteries based on metal dibenzo(b,i)(1,4,8,11)tetraaza(14)-annulene-iodine charge transfer complexes, **22**, 69
Charge transfer reactions
the kinetics of charge-transfer reactions on passive lithium electrodes, **26**, 129
Charging
aspects of lead/acid battery technology. 5. Dry charging of formed negative plates, **45**, 353,, 353

behaviour of the $PbO_2/PbSO_4$ electrode with regard to charging regime and small additions of phosphoric acid to the sulfuric acid electrolyte, **30**, 99
effects of fast charging on hybrid lead/acid battery temperature, **48**, 163
fast charging of lead/acid batteries, **46**, 375
gas detection and minimization of gas and heat production at the end of fast charging, **40**, 105
a model for simulating fast charging of lead/acid batteries, **40**, 81
a simple approach to the determination of the charging state of photovoltaic-powered storage batteries, **41**, 65
structural changes in the active mass of the negative electrode of the lead/acid battery during charging, **32**, 143
very fast charging of low-resistance lead/acid batteries, **40**, 93
Chemical analysis
chemical analysis of charges Li/SO_2 cells, **21**, 227
Chemical applications
strontium ceramics for chemical applications, **6**, 121
Chemical impregnation
chemical impregnation and sinter corrosion in plaques for nickel/cadmium cells, **28**, 247
Chemical power sources
expected development of chemical power sources, **11**, 69
Chemical vapour deposition
molybdenum trisulfide thin film cathodes prepared by chemical vapour deposition (extended abstract), **26**, 103
preparation and characterization of a thin film of polymer electrolyte by plasma CVD. Part IV. All-solid-state lithium batteries, **26**, 457
Chemisorbed water
comments on "Effect of chemisorbed water on the electrical capacity of the lead/acid battery positive plate", **22**, 175
reply to comments on "Effect of chemisorbed water on the electrical capacity of the lead/acid battery positive plate", **22**, 179
Chlorine
a design for zinc/chlorine batteries, **8**, 359
an electrochemically regenerative hydrogen/chlorine energy storage system for electric utilities, **2**, 191
a high performance hydrogen/chlorine fuel cell for space power applications, **47**, 321
studies on the alkali metal alloy/chlorine secondary battery, **1**, 159
Chlorine substituents
reduction of voltage delay in the $Li/SOCl_2$ system — a study of polymers with chlorine substituent groups as delay reducing additives, **20**, 61
Chromium
amorphous chromium oxide; a new lithium battery cathode, **20**, 151
behaviour of $AgBi(Cr_2O_7)_2$ as a possible cathode for lithium cells, **10**, 63
behaviour of the Cr(III)/Cr(II) reaction on gold/graphite electrodes. Application to redox flow storage cell, **35**, 225
chemical and electrochemical lithium insertion into ternary transition metal sulfides MMo_2S_4 (M: V, Cr, Fe), **39**, 299
development of a 0.1 kW power accumulation pilot plant based on an Fe/Cr redox flow battery. Part 1. Considerations on flow-distribution design, **48**, 293
electrochemical aspects of the deintercalation of layered AMO_2 compounds, **14**, 231
electrochemical reactivity of the CrO_3/graphite system in ammonium chloride solution, **32**, 195
the influence of a CrO_3–graphite intercalation compound on the discharge characteristics of an MnO_2 cathode in alkaline electrolyte, **25**, 133
$Li–AgBi(CrO_4)_2$: a new highly reliable lithium battery for long service life applications, **9**, 339
modified chromium oxides for high-rate lithium intercalation cathodes, **26**, 409
optimization studies on a Fe/Cr redox flow battery, **39**, 147
plastic-bonded electrodes for nickel/cadmium accumulators. IX. Oxygen recombination rate on plastic-bonded cadmium electrodes with different active materials, **8**, 273

positive electrode for galvanic cells prepared by anodization of CrO_3–graphite intercalation compounds in aqueous sulfuric acid, **41**, 263
on the possibility of using silver salts other than Ag_2CrO_4 in organic lithium cells, **3**, 347
the preparation and electrochemical properties of chromium oxides CrO_x both in lithium and sodium aprotic electrolytes, **39**, 133
secondary lithium cell based on Li_x-$Cr_{1-y}Cy_yS_2$ obtained in potassium polysulphide melts, **34**, 119
studies of spinel $LiCr_xMn_{2-x}O_4$ for secondary lithium battery, **44**, 539
Chromium oxide
characteristics of amorphous chromium oxide as a cathode for lithium organic solvent cells, **14**, 215
chromium oxides as cathodes for lithium cells, **9**, 325
Chromotropic acid
interaction of Fe^{2+}/Fe^{3+} and Ti^{3+}/Ti^{2+} with chromotropic acid: conductometric and spectrophotometric studies, **24**, 341
Circulating electrolyte battery(ies)
circulating electrolyte zinc/bromine battery. Test program and procedures, **17**, 135
Clay–carbon composites
electric double-layer capacitors using porous and electrically conducting clay–carbon composites as electrodes, **32**, 165
Coal
prospects for advanced coal-fuelled fuel cell power plants, **49**, 143
Cobalt
cobalt and cobalt-based macrocycle blacks as oxygen-reduction catalysts in alkaline fuel cells, **45**, 219
a contribution to the characterization of heat treated electrocatalytically active tetramethoxyphenylporphyrinato-cobalt-II, **6**, 69
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–MnO_2 system, **41**, 223
cyclic voltammetric studies of pure and doped films of cobalt hydroxide in 1 M KOH, **36**, 507
the cycling properties of the $Li_xN_{1-y}Co_yO_2$ electrode, **44**, 595
effect of Cd, Ni, Zn, and Co ions on electrode reactions of the lead/acid battery, **32**, 43
electrochemical aspects of the deintercalation of layered AMO_2 compounds, **14**, 231
electrochemical behaviour of α-cobalted nickel hydroxide electrodes, **36**, 497
the electrochemical reduction of oxygen on cobalt-cemented tungsten carbide, **9**, 1
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as catalysts for the electrochemical reduction of oxygen in acid electrolytes, **13**, 217
the increase of stability of Li_xCoO_2 electrodes of cointercalated sodium, **39**, 313
influence of cobalt ions on the behaviour of maintenance-free lead/acid batteries with antimony alloys, **31**, 151
infrared characterization of turbostatic α- and well crystallized α^*-cobalted nickel hydroxides, **36**, 113
the $Li_xTiS_2|Li_{(1-x)}CoO_2$ solid-state rocking chair battery, **44**, 481
Li/Li_xNiO_2 and Li/Li_xCoO_2 rechargeable systems: comparative study and performance of practical cells, **43**, 209
lithium-ion rechargeable cells with $LiCoO_2$ and carbon electrodes, **43**, 241
migration of cobalt in nickel oxide/hydroxide active material of a nickel electrode in a Ni/H_2 cell, **50**, 57
optimization of the pyrolysis temperature of active carbon–CoTMPP catalysts for air electrodes in alkaline media, **17**, 345
preparation and characterization of cobalt-substituted α-nickel hydroxides stable in KOH medium. Part I. α'-Hydroxide with an ordered packing, **35**, 249
preparation and characterization of cobalt-substituted α-nickel hydroxides stable in KOH medium. Part II. α-Hydroxide with a turbostratic struc-

ture, **35**, 263
rechargeable $LiCoO_2$ in inorganic electrolyte solution, **44**, 583
a rechargeable Li/Li_xCoO_2 cell incorporating a $LiCF_3SO_3$–NMP electrolyte, **44**, 673
a rechargeable Li/Li_xCoO_2 cell, **21**, 25
some aspects of the a.c. impedance behaviour of nickel hydroxide and nickel/cobalt hydroxide electrodes in alkaline solution, **27**, 15
some effects of cobalt hydroxide upon the electrochemical behaviour of nickel hydroxide electrodes, **25**, 89
synthesis of $LiCoO_2$ from cobalt–organic acid complexes and its electrode behaviour in a lithium secondary battery, **40**, 347
Cobalt electrodes
high-porosity sintered cobalt negative electrodes for alkaline batteries, **16**, 271
Cobalt phthalocyanine
electroreduction of oxygen on some novel cobalt phthalocyanine complexes, **28**, 317
Coiling
mathematics of coiling in cylindrical electrochemical cells: the theory of a spiral bounded by two circles and its application to the spiral-wound nickel/cadmium cell, **3**, 311
Cold cranking
modelling of the cold-cranking performance of automottive lead/acid batteries, **30**, 249
Combined heat and power application
commercialisation of fuel cells for combined heat and power (CHP) application, **37**, 101
Commercial applications
the lithium/iodine cell for medical and commercial applications, **5**, 15
Composite anodes
is 'protode' a new name for composite anodes in solid-state protonic batteries?, **48**, 385
Composite electrodes
alloy/conducting-polymer composite electrodes: electrolyte, cathodes, and morphology, **26**, 93
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–MnO_2 system, **41**, 223
cycling behaviour of the polypyrrole-polyethylene oxide composite electrode, **21**, 17
fabrication and activation studies of condcting plastic composite electrodes for redox cells, **36**, 29
a sol-gel route to composite positive electrodes for lithium cells with polymer electrolytes, **28**, 397
theoretical study of a composite electrode using an intercalation compound: influence of the particle size distribution on the depth of discharge, **14**, 209
Composite electrolytes
the effect of different internal surfaces in composite lithium electrolytes, **20**, 317
an electrochemical study of PEO:$LiBF_4$-glass composite electrolytes, **47**, 63
the lithium polymer electrolyte battery. IV. Use of composite electrolytes, **32**, 381
Composite fibres
composite fiber structures for catalysts and electrodes, **47**, 297
Composite membranes
preparation and evaluation of composite membrane for vanadium redox battery applications, **39**, 11
Compressed powders
the conductivity of compressed powders. A review, **3**, 117
Computer
analyzing cell designs by computer for optimum performance. A technical note, **4**, 321
Computer network
use of computer network to achieve testing flexibility, **17**, 207
Computer studies
calculation of potential distribution and voltage drop at electrodes on high-rate discharge: literature survey and computer-aided approach, **42**, 103
computer formation of sealed lead/acid batteries, **38**, 137
computer simulation of thermal modelling of primary lithium cells, **21**, 183
PEAKS®: a PC-based method for quantitative X-ray diffraction phase analysis of lead/acid battery materials, **32**,

315
a simple electrical circuit for computer-controlled operation of battery charge/discharge units, **35**, 189
Computer systems
computer aided design of a bipolar lead/acid battery, **36**, 155
a computer-controlled discharge unit for the testing of nickel/cadmium cells and batteries, **16**, 119
computer-controlled multiple-channel system for electrochemical experiments, **10**, 149
computer model for battery paste calculations, **28**, 127
computer simulation of thermal modelling of alkaline hydrogen/ooxygen fuel cells, **36**, 185
the design **17**, 239
developments to the Chloride Type 8 oxide mill including computerised production control, **28**, 113
a low-cost, computer-aided electrochemical system for characterizing battery electrodes, **32**, 99
Conductance
the conductance behaviour of mixed organic electrolytes for a non-aqueous Li/MnO_2 battery, **34**, 189
evaluating the state-of-health of flooded and valve-regulated lead/acid batteries. A comparison of conductance testing with traditional methods, **46**, 391
updated status of conductance/capacity correlation studies to determine the state-of-health f automotive and stand-by lead/acid batteries, **48**, 135
Conductance measurements
in situ conductance measurements of lead accumulator negative plates, **10**, 271
Conductance testing
conductance testing compared to traditional methods of evaluating the capacity of valve-regulated lead/acid batteries and predicting state-of-health, **40**, 235
Conducting polymers
alloy/conducting-polymer composite electrodes: electrolyte, cathodes, and morphology, **26**, 93
conducting polymers as active materials in electrochemical capacitors, **47**, 89
improved conducting polymer cathodes for lithium batteries, **45**, 237
new conducting polymer networks, **44**, 445
Conduction
oxygen ion conductionin pure and yttria-doped barium cerate, **14**, 295
silver arsenate amorphous electrolyte batteries: conduction characteristics and electrochemical performance, **34**, 339
Conductive polymers
characteristics of a lithium secondary battery using chemically-synthesized conductive polymers, **34**, 153
conductive polymers: new tools and materials for electrochemistry, **14**, 11
Conductivity
conductivities of 1,2-dimethoxyethane or 1,2-dimethoxyethane-related solutions of lithium salts, **41**, 77
the conductivity of compressed powders. A review, **3**, 117
conductivity of electrolytes for rechargeable lithium batteries, **35**, 59
conductivity of $LiAlCl_4$ solutions in nitromethane containing SO_2, **12**, 31
conductivity of low-temperature electrolytes for magnesium batteries, **39**, 155
conductivity model for lead/acid battery electrodes discharged at low rates, **38**, 281
conductivity and stability towards lithium metal of lithium triflate ($LiCF_3SO_3$) and lithium bistrifluorosulfonylimide $Li(SO_2CF_3)_2N$ in amines and their mixtures with ammonia, **44**, 349
conductivity and viscosity studies of dimethyl sulfoxide (DMSO)-based electrolyte solutions at 25 °C, **50**, 283
enhancement of the ionic conductivity and the amorphous state of solid polymer electrolytes for rechargeable lithium batteries, **44**, 473
enhancement of the ionic conductivity of lithium borophosphate glass: a mixed glass former approach, **25**, 257
factors affecting the conductivity of divalent polymeric electrolytes, **32**, 107
improvement of solid electrolyte conductivity and cathodic properties of the $Li|LiI \cdot H_2O(SiO_2)|PbI_2$ electrochemical

cell, **38**, 345
influence of fine materials on thickness and conductivity of manganese dioxide powder under pressure — a technical note, **4**, 281
modeling the effects of electrolyte diffusion and paste conductivity on lead/acid battery performance, **46**, 49
phase relations and conductivity in the system poly(ethylene oxide)/$LiClO_4$, **26**, 503
semiconductivity and solid electrolyte characteristics of surface films formed on active metal of interest in high energy density batteries, **24**, 243
structure–conductivity relationship in polymer electrolytes formed by network polymers from poly[dimethylsiloxane-g-poly(ethylene oxide)] and lithium perchlorate, **20**, 327
Conductivity measurements
conductivity measurements on pure and mixed metal dioxides, **4**, 203
time effects in conductivity measurements of lead/acid battery electrodes, **30**, 309
Conductivity method
measurement of the tortuosity factor of Ni/Cd battery electrodes by an improved conductivity method, **3**, 167
Conductometry
interaction of Fe^{2+}/Fe^{3+} and Ti^{3+}/Ti^{2+} with chromotropic acid: conductometric and spectrophotometric studies, **24**, 341
Continuous-operation applications
a preliminary evaluation of lithium batteries for extended-life continuous-operation applications, **14**, 167
Copper
alpha-phase stabilization in silver and copper halide solid electrolytes, **4**, 165
characterization of cadmium-doped copper indium sulfide films prepared by a two-step technique, **35**, 305
characterization of $Cu_2V_2O_7$ as cathode material for lithium cells by X-ray and photoelectron spectroscopy, **44**, 589
copper(II) sulfide as cathode active material in secondary lithium batteries, **44**, 701
copper-stretch-metal technology and applications, **19**, 147
CuO cathode in lithium cells, **15**, 101
discharge characteristics of solid-state cells incorporating thin films of a cuprous halide mixed phase, **24**, 349
dissolution behaviour of copper and nickel oxides in molten $Li_2CO_3/Na_2CO_3/K_2CO_3$, **23**, 357
effects of an additive material, $CuFeS_2$, on Li/CuO battery performance, **20**, 119
electrical conductivity of KCu_4I_5, **1**, 103
electrochemical method for improving the spectral response of CdS/Cu_2S heterojunctions, **13**, 85
on electrochemical photovoltaic cells formed with $CuInS_2$ films, **21**, 59
a high-temperatture lithium/copper oxide cell with a solid polymer electrolyte, **35**, 235
high-temperature superconductor **40**, 361
the influence of preparation conditions on the electrochemical behaviour of CuO in a Li/CuO cell, **14**, 269
an investigation on various cathodic materials in copper solid-state power sources, **1**, 57
the $Li/Cu_4O(PO_4)_2$ couple: a new version for long-life low-rate applications, **20**, 111
lithium/copper molybdate and lithium/copper tungstate organic solvent batteries, **2**, 265
lithium/cupric sulfide cells, **9**, 409
a rechargeable lithium battery employing a porous thin film of $Cu_{3+\delta}Mo_6S_{7.9}$, **20**, 199
a review of silver **1**, 333
some aspects of lithium/copper compound cells in LiCl–KCl eutectic, **1**, 237
Copper electrodes
discharge characteristics of solid-state cells with magnesium and copper electrodes and thin-film, **24**, 165
Copper oxide
button-type lithium battery using copper oxide as a cathode, **5**, 99
Copper oxide cathodes
copper oxide cathodes for lithium organic electrolyte batteries, **16**, 309
Copper sulfide films

effect of thermal treatments on the properties of Cu_xS films obtained by evaporation, **9**, 41
Corrosion
activity and corrosion of tungsten carbide recombination electrodes during lead/acid battery operation, **40**, 333
chemical impregnation and sinter corrosion in plaques for nickel/cadmium cells, **28**, 247
a comparative study of the effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, **13**, 297
corrosion behaviour of aluminium in molten sodium, **47**, 45
corrosion behaviour of low-antimony lead alloy in sulfuric acid solution, **50**, 47
corrosion of magnesium alloy in aqueous magnesium perchlorate battery electrolyte — a gasometry study, **39**, 107
corrosion of platinum catalyst in alkaline solutions, **8**, 301
corrosion protection of secondary lithium electrodes in organic electrolytes, **20**, 253
corrosion resistance and catalytic activity of tungsten carbide in phosphoric acid, **12**, 1
corrosion testing of candidates for the alkaline fuel cell cathode, **29**, 443
effect of additives on the corrosion of zinc in KOH solution, **6**, 47
the effect of ageing on the anodic corrosion of Pb–Sb alloys, **3**, 145
effect of antimony on the anodic corrosion of lead and oxygen evolution at the $Pb/PbO_2/H_2O/O_2/H_2SO_4$ electrode system, **23**, 331
effect of bismuth on the corrosion behaviour of lead in sulfuric acid, **36**, 57
effect of corrosion layer on phenomena that cause premature capacity loss in lead/acid batteries, **48**, 179
the effect of current density and thickness of the active mass upon the corrosion rate of the spines of lead/acid battery plates, **10**, 291
the effect of method of preparation on the corroision resistance and catalytic activity during corrosion of tungsten carbide. I. Corrosion resistance of tungsten carbide in sulfuric acid, **5**, 273
the effect of method of preparation on the corroision resistance and catalytic activity during corrosion of tungsten carbide. II. Changes in the catalytic activity of tungsten carbides during the corrosion process, **5**, 283
effects of grid alloy on the properties of positive-plate corrosion layers in lead/acid batteires. Implications for premature capacity loss under repetitive deep-discharge cycling service, **48**, 195
effect of sodium cation on lithium corrosion in aprotic media (extended abstract), **26**, 455
effect of sodium on lithium corrosion in aprotic media, **28**, 335
evaluation of cyclic voltammetry for accelerated corrosion life tests of the PbO_2 electrode, **2**, 241
an examination of corroded positive grids from a lead/acid battery, **17**, 369
influence of bismuth on the corrosion of lead in 5 M H_2SO_4, **34**, 369
influence of inhibitors on corrosion and anodic behaviour of different grades of aluminium in alkaline media, **50**, 321
influence of the lead dioxide active mass on the corrosion rate of the spines of positive lead/acid battery plates, **6**, 15
a photocurrent imaging study of the distribution of lead monoxide in corrosion layers on lead/acid battery grids, **42**, 119
reduction of calcium corrision in thionyl chloride-based electrolyte, **28**, 361
a rotating ring–disc electrode study of impurity effects on lead corrosionin sulfuric acid, **13**, 55
a study of the corrosion of negative-plate lead-antimony lugs in lead/acid batteries, **45**, 131
the use of scanning photocurrent imaging to study the distribution of lead monoxide in corrosion layers on

lead/acid battery grids, **38**, 373
Cost reductions
cost reductions in the nickel/hydrogen battery, **22**, 229
Coulombic efficiency
precision cycling and Coulombic efficiency measurements in Li/MoS_2 and Li, Al/FeS cells, **26**, 293
Crystal chemistry
crystal chemistry of electrochemically inserted $Li_xV_2O_5$, **34**, 103
Crystalline phase composition
crystalline phase composition of positive plates in lead/acid traction batteries under simulated electric vehicle service, **8**, 175
Cupric sulfide
lithium/cupric sulfide cells, **9**, 409
Cuprous sulfate electrolytes
discharge characteristics of solid-state cells with magnesium and copper electrodes and thin-film, **24**, 165
Curing
accelerated curing of negative plates for lead/acid batteries, **31**, 217
aspects of lead/acid battery technology. 3. Plate curing, **41**, 185
curing pasted plates for lead/acid batteries, **19**, 169
effect of curing on positive plate behaviour in lead/acid cells, **32**, 407
hydrothermal curing of lead/acid battery positive plates, **36**, 95
improving the curing of positive plates for lead/acid batteries, **31**, 203
mechanism of oxidation of free lead in lead accumulator paste by curing, **17**, 331
relative-humidity/temperature relationships for saturated salt solutions: application to lead/acid plate curing, **22**, 169
Current–potential curves
mathematical modelling of current-potential curves for the Pb/H_2SO_4 system, **30**, 243
Current–potential data
digital simulation of galvanostatic current–potential data for gas-diffusion electrodes and estimation of electrode-kinetic parameters, **50**, 177
Current–voltage output characteristics
a new model for the current–voltage output characteristics of photovoltaic modules, **50**, 11
Current carrying capability
plastic-bonded electrodes for nickel/cadmium accumulators. V. Influence of the current collector and mechanical compression on the current carrying capability of the nickel oxide electrode, **6**, 161
Current collector
measurement of the contact resistance between the active mass and the current collector in lead/acid battery electrodes, **30**, 315
Current-conducting components
new materials for current-conducting components in lead/acid batteries, **36**, 473
Current density
the effect of current density and thickness of the active mass upon the corrosion rate of the spines of lead/acid battery plates, **10**, 291
lithium electrode cycleability and morphology dependence on current density, **43**, 27
Current distribution
non-linear simulation of current distribution and potential profile in porous manganese dioxide electrodes during discharge, **6**, 25
Current efficiency
current efficiency in the lithium/water battery, **2**, 163
Current reversal
reaction products on current or potential reversal in Li/$SOCl_2$ cells, **13**, 287
Customer applications
application testing of batteries for utility load leveling and customer applications at the Battery Energy Storage Test (BEST) facility, **17**, 90
Cyanoacrylate coatings
a possible mechanism for the reduction of voltage delay in the Li/$SOCl_2$ system via cyanoacrylate coatings on lithium, **10**, 179
Cyclability
cyclability of the lithium electrode, **20**, 9
effects of physical constraints on Li cyclability, **36**, 517
interfacial phenomena in polymer-electrolyte cells: lithium passivation and cyclability, **43**, 9

lithium electrode cycleability and morphology dependence on current density, **43**, 27
some problems of the cycleability of lithium electrodes, **26**, 563
Cycle life
accelerated cycle life testing of lead/acid golf car batteries and the influence of separator type on battery life, energy consumption and operating cost, **10**, 137
accelerated cycle-life testing of small sealed lead/acid batteries, **38**, 143
analytical modeling of battery cycle life, **12**, 317
BCI cycle life testing procedures for deep-cycle lead/acid batteries, **17**, 152
capacity–cycle life behavior in secondary lithium cells, **14**, 53
cycle life measurement of a sealed lead/acid battery, **34**, 25
cycle life of stressed lead/acid batteries, **13**, 93
effect of discharge current on cycle life of a rechargeable lithium battery, **24**, 195
the effect of pulse charging on the cycle-life performance of zinc/nickel oxide cells, **22**, 77
high gelled-electrolyte quality with polyacrylamide polymer: limitation of cycle-life through water loss, **33**, 127
KOH concentration effect on the cycle life of nickel/hydrogen cells. III. Cycle life test, **22**, 213
KOH concentration effect on the cycle life of nickel-hydrogen cells. IV. Results of failure analyses, **29**, 503
a new concept for high-cycle-life LEO: rechargeable MnO_2–hydrogen batteries, **29**, 333
the validity of cycle life bench test data in relation to real world in-vehicle testing, **17**, 257
Cycle testing
driving cycle testing of electric vehicle batteries and systems, **40**, 73
Cyclic voltammetry
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–MnO_2 system, **41**, 223
cyclic voltammetric studies of pure and doped films of cobalt hydroxide in 1 M KOH, **36**, 507
cyclic voltammetric study of quinone–hydroquinone organic system in aqueous magnesium perchlorate electrolyte, **45**, 177
cyclic voltammetry on lead electrodes in sulfur acid solution, **1**, 257
effect of zinc and iron ions of the electrochemistry of nickel oxide electrode: slow cyclic voltammetry, **47**, 79
evaluation of cyclic voltammetry for accelerated corrosion life tests of the PbO_2 electrode, **2**, 241
hairy carbon electrodes studied by cyclic voltammetry and battery discharge testing, **47**, 313
the mechanism of the formation of positive battery plates from pure lead. 1. Cyclic voltammetry, **6**, 83
performance characteristics of a pilot sea-water activated battery with Pb/$PbCl_2$ cathodes, prepared by cyclic voltammetry, **41**, 55
Cycling
behaviour of the lithium electrode during cycling in nonaqueous solutions, **26**, 585
cycling of β-LiAl in organic electrolytes — effect of electrode contaminations and electrolyte additives, **14**, 193
cycling behaviour of electrodeposited zinc alloy electrode for secondary lithium batteries, **40**, 283
cycling behaviour of molybdenum dichalcogenides in aprotic organic electrolyte solution, **14**, 223
cycling behaviour of the polypyrrole-polyethylene oxide composite electrode, **21**, 17
the cycling behaviour and stability of the lithium electrode in propylene carbonate and acetonitrile electrolytes, **10**, 1
on the cycling of positive Planté electrodes, **9**, 47
the cycling properties of the $Li_xN_{1-y}Co_yO_2$ electrode, **44**, 595
degradation of the positive plate of the lead/acid battery during cycling, **30**, 131
effect of cycling on the lithium/electrolyte interface in organic

electrolytes, **43**, 21
effects of grid alloy on the properties of positive-plate corrosion layers in lead/acid batteires. Implications for premature capacity loss under repetitive deep-discharge cycling service, **48**, 195
effect of solvent blending on cycling characteristics of lithium, **20**, 299
the electrochemistry of porous zinc. V. The cycling behaviour of plain and polymer-bonded porous electrodes in KOH solutions, **15**, 261
electrodeposited α-PbO_2 and β-PbO_2 in sulfuric acid: recharge, cycling and morphology, **13**, 223
grid alloys for maintenance-free deep-cycling batteries, **33**, 3
improved grid alloys for deep-cycling lead/calcium batteries, **33**, 13
improving the performance of deep-cycling, valve-regulated, lead/acid batteries, **33**, 93
influence of Fe(III) ions on the nickel hydroxide electrode during long-term cycling, **21**, 77
inorganic film-forming electrolyte additives improving the cycling behaviour of metallic lithium electrodes and the self-discharge of carbon/lithium electrodes, **44**, 413
lithium-cycling efficiency in inorganic electrolyte solution, **44**, 405
location of the phenomena of premature capacity loss during cycling of lead/acid batteries with lead grids, **46**, 203
precision cycling and Coulombic efficiency measurements in Li/MoS_2 and Li, Al/FeS cells, **26**, 293
premature capacity loss in lead/acid batteries with antimony-free grids during cycling under constant-voltage-charging conditions. 1. Characterization and causes of the phenomenon, **46**, 191
pure lead and the tin effect in deep-cylcing lead/acid battery applications, **33**, 165
the secondary lithium/aluminium electrode at room temperature. I. cycling in $LiClO_4$–propylene carbonate solutions, **12**, 145
suppression of premature capacity loss by methods based on the gel–crystal concept of the PbO_2 electrode, **46**, 171
two-and three-electrode studies of cycling in expeirmental polymer electrolyte cells, **44**, 461
variables affecting the deep-cycling characteristics of expanded-grid lead/acid battery, **33**, 187

Data acquisition
data acquisition and control instrumentation of the BEWAG battery test facility, **17**, 201
Data reduction algorithm
a test and data reduction algorithm for the evalaution of lead/acid battery packs, **17**, 114
Decomposition
CuO cathode in lithium cells, **15**, 101
Degradation
degradation modes of alkaline fuel cells and their components, **39**, 21
degradation in nickel/cadmium cells studied by impedance measurements, **12**, 289
degradation of the positive plate of the lead/acid battery during cycling, **30**, 131
on the processes responsible for the degradation of the aluminium/lithium electrode used as anode material in lithium aprotic electrolyte batteries, **9**, 235
statistical analysis of performance degradation of lead/acid battery under simulated electric vehicle operations, **24**, 215
technological implications in studies of nickel electrode performance and degradation, **12**, 233
Deintercalation
electrochemical aspects of the deintercalation of layered AMO_2 compounds, **14**, 231
Delayed action
the delayed action of magnesium anodes in primary batteries. Part I. Experimental studies., **10**, 219
the delayed action of magnesium anodes in primary batteries. Part II. Theoretical studies, **10**, 243
Demonstration plants

PAFC demonstration plants in Europe: first results, **49**, 63
Dendritic growth
dynamics of dendritic growth, **26**, 121
methods for the reduction of shape change and dendritic growth in zinc-based secondary cells, **35**, 333
Depolarized
isopropoxide ion – a novel depolarized for aluminium batteries, **37**, 411
Depolarizer
para-Nitrotoluene as a depolarized for magnesium batteries, **39**, 121
Design
an advanced nickel/cadmium battery cell design, **18**, 155
antimony in lead/acid cells, **19**, 75
the battery designer's challenge – satysfying the ever-increasing demands of vehicle electrical systems, **33**, 309
design concepts of high power bipolar rechargeable lithium battery, **43**, 327
design-in – working with the car manufacturers, **38**, 161
design optimization of tall tubular lead/acid cells based on an analysis of the reaction distribution, **16**, 65
design and performance of a sodium/sulfur multitube cell, **10**, 263
examination of design options for 35 A h ambient temperature Li/TiS_2 cells, **18**, 127
a flooded–starved design for nickel/cadmium cells, **18**, 161
how the systems approach is determining automotive battery design and use, **42**, 185
optimum design of a photovoltaic powered pumping system, **50**, 1
water management and stack design for solid polymer fuel cells, **49**, 117
Destruction
thermal efficiency of electrochemical systems. Thermal self-destruction of highly energy-intensive lithium power sources, **45**, 303
Dialkoxyethane
dialkoxyethane–propylene carbonate mixed electrolytes for lithium secondary batteries, **13**, 261
Dichloroisocyanuric acid
a novel cell: zinc/dichloroisocyanuric acid in aqueous chloride medium, **39**, 323
Diesel engines
efficiencies of heat engines and fuel cells: the methanol fuel cell as a competitor to Otto and Diesel engines, **7**, 215
Differential scanning calorimetry
differential scanning calorimetry studies of possible explosion-causing mixtures in Li/SO_2 cells, **3**, 291
Diffraction techniques
application of diffraction techniques in studies of lead/acid battery performance, **11**, 19
Diffusion
diffusional limitations at the lithium polymer electrolyte interface, **39**, 215
diffusion of lithium in the TiO_2 cathode of a lithium battery, **20**, 127
the diffusion of various anions in a polyacetylene cathode of a secondary lithium battery, **25**, 277
Diffusion length
diffusion length determination in thin film CdS/$CuInSe_2$ solar cells by the EBIC method, **12**, 167
Diffusivity
phase changes and diffusivity in the carbon/lithium electrode, **25**, 151
Difluoroethane
modification of lithium/electrolyte interface by plasma polymerization of 1,-difluoroethene, **44**, 377
Dimethoxyethane
conductivities of 1,2-dimethoxyethane or 1,2-dimethoxyethane-related solutions of lithium salts, **41**, 77
ionic association of lithium salts in propylene carbonate/1,2-dimethoxyethane mixed systems for lithium batteries, **45**, 229
Dimethyl sulfoxide electrolyte
conductivity and viscosity studies of dimethyl sulfoxide (DMSO)-based electrolyte solutions at 25 °C, **50**, 283
Dinitrobenzene
mono methyl substituted *m*-dinitrobenzene compounds as cathode materials in magnesium batteries, **25**, 295
performance characteristics of chloro-substituted dinitrobenzene for magnesium reserve batteries, **45**, 119
Dioxolane
solution of $LiAsF_6$ in 1,3-dioxolane for secondary lithium batteries, **39**, 163

the stabilization of $LiAsF_6$/1, 3-dioxolane for use in rechargeable lithium batteries, **26**, 519
Direct oxidation methanol fuel cells
advances in direct oxidation methanol fuel cells, **47**, 377
proton-exchange membrane regenerative fuel cells, **47**, 343
Disc electrodes
a rotating ring–disc electrode study of impurity effects on lead corrosionin sulfuric acid, **13**, 55
Discharge
on the anomalous behaviour of deeply discharged **8**, 403
application of FeOCl derivatives as cathode materials for a secondary lithium battery. II. Comparison of the discharge and charge characteristics of γ-FeOOH prepared from the intercalation compound of FeOCl and 4-aminopyridine with those of FeOOH intercalated with aniline (a-FeOOH(AN)), **40**, 291
an approximate model for estimating the faradaic efficiency loss in zinc/bromine batteries caused by cell self-discharge, **50**, 343
calculation of potential distribution and voltage drop at electrodes on high-rate discharge: literature survey and computer-aided approach, **42**, 103
the capacity limiting role of the electronic conductivity of the active material in lead/acid batteries during discharge, **7**, 281
in situ Raman spectra of the discharge products of calcium and lithium-anoded thionyl chloride cells – sulfur dioxide generation in oxyhalide systems, **34**, 1
characteristics of valve-regulated lead/acid batteries for automotive applications under deep-discharge duty, **33**, 105
charge–discharge behaviour of lead/mercury cell in aqueous sulphuric acid, **35**, 183
comments on the discharge mechanism of silver iodide-based solid electrolyte cells, **4**, 169
a computer-controlled discharge unit for the testing of nickel/cadmium cells and batteries, **16**, 119
conductivity model for lead/acid battery electrodes discharged at low rates, **38**, 281
determination of discharge time and capacity by short-period discharge method, **30**, 257
development of a nickel electrode having stable performance at various charge and discharge rates over a wide temeprature range, **12**, 219
discharge behaviour of electrodeposited PbO_2 and Pb electrodes, **7**, 73
discharge characterisation of lead/acid batteries, **28**, 161
discharge characteristics of CMD, EMD, rho and synthetic birnessite in concentrated alkaline electrolyte, **23**, 309
discharge characteristics of graphite fluoride prepared via graphite oxide, **20**, 93
discharge characteristics and interface impedance of an Li/1 M $LiClO_4$(PC)/V_2O_5, **16**, 97
discharge characteristics of a lithium battery with fibrous carbon fluoride, **20**, 99
discharge characteristics of lithium/molten nitrate thermal battery cells using silver salts as solid cathode materials, **16**, 243
discharge characteristics of solid-state cells incorporating thin films of a cuprous halide mixed phase, **24**, 349
discharge characteristics of solid-state cells with magnesium and copper electrodes and thin-film, solid electrolyte of cuprous sulphate, **24**, 165
the discharge and charge characteristics of FeOCl modified by an organic compound, **26**, 467
on the discharge mechanism of silver/alkylammonium polyiodide solid state cells, **2**, 389
discharge performance of composition insertion electrodes analysis of discharges of 50 vol.% Li_3N/TiS_2 electrodes, **44**, 733
the discharge reaction mechanism of the MoO_3 electrode in organic electrolytes, **1**, 267
discharge reaction and overpotential of the graphite fluoride cathode in a non-aqueous lithium cell, **20**, 87

effect of discharge current on cycle life of a rechargeable lithium battery, **24**, 195
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, **41**, 99
the effect of nicotinamide on the charge/discharge behavior of PbO_2 electrode in sulfuric acid solution, **39**, 43
effect of previous charge/discharge history on the capacity of the PbO_2PbSO_4 electrode: the hysteresis or memory effect, **25**, 27
effects of grid alloy on the properties of positive-plate corrosion layers in lead/acid batteires. Implications for premature capacity loss under repetitive deep-discharge cycling service, **48**, 195
hairy carbon electrodes studied by cyclic voltammetry and battery discharge testing, **47**, 313
heat dissipation from lithium/silver vanadium oxide cells during storage and low-rate discharge, **20**, 179
the high rate discharge characteristics of silver chromate, silver molybdate, and silver tungstate cathodes in molten nitrate electrolytes, **15**, 141
improved gelled-electrolyte lead/acid batteries for deep-discharge applications, **31**, 43
improvement in discharge rate and low temperature characteristics of lithium/iodine cells, **14**, 173
improvement of heavy-drain discharge properties of polypyrrole cathode by the electro-codepositionof carbon powder, **44**, 611
influence of calcium sulfate in the positive material on the discharge performance of lead/acid batteries, **35**, 83
the influence of a CrO_3–graphite intercalation compound on the discharge characteristics of an MnO_2 cathode in alkaline electrolyte, **25**, 133
the influence of mass transport processes on the performance of the lead/acid cell on pulsed discharge, **10**, 53
the influence of pulsed discharge on the capacity of lead/acid batteries, **12**, 71
influence of recharge potential and acid concentration on the discharge behaviour of PbO_2 electrodes, **46**, 231
the influence of temperature on the discharge capacity of positive lead/acid battery plates. Theory and experiments, **6**, 319
inorganic film-forming electrolyte additives improving the cycling behaviour of metallic lithium electrodes and the self-discharge of carbon/lithium electrodes, **44**, 413
the lithium/manganese dioxide cell. III. A comparison of electrolytic and chemical MnO_2 in lithium button cells at high discharge rates, **27**, 261
the lithium/sulfuryl chloride battery: discharge behaviour, **5**, 263
long-term discharge characteristics of lithium/iodine cells with an additive in poly(2-vinylpyridine) iodide, **20**, 141
low temperature discharge characteristics of lithium/manganese dioxide cells, **8**, 35
modeling the discharge behaviour of the lithium/iodine battery, **43**, 111
multiple constant power discharge tester, **17**, 210
new apparatus for the measurement of the self-discharge of the nickel hydroxide electrode, **34**, 331
non-linear simulation of current distribution and potential profile in porous manganese dioxide electrodes during discharge, **6**, 25
operation of oxygen cycle during charge and discharge of sealed PbO_2/Pb cells using the separator as electrolyte carrier, **27**, 201
passivation of the positive electrode of the lead/acid battery: a consequence of self-discharge, **30**, 47
plastic-bonded electrodes for nickel/cadmium accumulators. III. Influence of active layer composition on galvanostatic and potentiostatic discharge curves, **4**, 349
plastic-bonded electrodes for nickel/cadmium accumulators. X. The nature of the second discharge step of nickel oxide elecrodes, **8**, 351
progressive discharge reaction of positive active mass on lead/acid batter-

ies, **1**, 127
pulse discharge characteristics of solid-state lithium batteries, **27**, 3
reference-electrode and gassing studies of lead/acid charge-discharge processes, **31**, 93
reliability of commercial lithium button cells. II. Effect of the state-of-discharge and environment on the passivation resistance, **25**, 61
reversible capacity decay of PbO_2 electrodes influence of high rate discharges and rest times, **40**, 157
self-discharge characteristics of spacecraft nickel/cadmium cells at elevated temperatures, **18**, 169
self-discharge of low-mercury zinc/silver-oxide button cells, **22**, 163
self-discharge in solid state cells, **13**, 115
a simple electrical circuit for computer-controlled operation of battery charge/discharge units, **35**, 189
a simple methodology for obtaining battery discharge times (and vehicle ranges) for arbitrarily structured load profiles, **17**, 284
simulation of the discharge curve by short-time discharge based on the power of internal resistance, **50**, 97
in situ micro-Raman study of discharge products of Li/$SOCl_2$ cells, **20**, 69
structural effect of the zinc electrode on its discharge perfomrmance, **10**, 167
a study of the discharge characteristics of lead/acid batteries, **8**, 41
a study of the discharge performance of the Ti/Fe redox flow system, **13**, 65
on the suppression of self discharge of the zinc electrodes of zinc/air cells and other related battery systems, **10**, 197
surface modification of metal hydride negative electrodes and their charge/discharge performance, **38**, 335
ten minutes-rechargeable, valve-regulated, lead/acid battery after deep discharge and stand, **46**, 383
theoretical study of a composite electrode using an intercalation compound: influence of the particle size distribution on the depth of discharge, **14**, 209
thermodynamic determinations for lithium/thionyl chloride and lithium/BrCl–thionyl chloride cells as a function of temperature and depth of discharge, **24**, 229
the voltage discharge characteristics of manganese dioxides, **23**, 295
voltammetric discharge efficiency of nickel hydroxide electrodes chemically precipitated on a platinum substrate, **25**, 75

Dissociation constant
determination of the dissociation constant of molten $Li_2CO_3/Na_2CO_3/K_2CO_3$ using a stabilized zirconia oxide-ion indicator, **16**, 75

Dissolution
anodic dissolution of aluminium in non-aqueous electrolytes, **42**, 377
dissolution behaviour of copper and nickel oxides in molten $Li_2CO_3/Na_2CO_3/K_2CO_3$, **23**, 357
metal depositon and dissolution monitored by *in situ* scanning tunneling microscopy, **43**, 169

Divers
local heating source for shallow water divers, **6**, 291

Dopants
effect of dopants (Group Va) on the performance of the positive lead/acid battery plate, **33**, 221

Doping
incorporation mechanism for doping of metal ions into a passivating film at the lithium/thionyl chloride interface, **45**, 7

Dry battery(ies)
aluminium and manganese as anodes for dry and reserve batteries, **11**, 155

Dry cells
alternating-current impedance of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 51
analysis of the failure mechanisms in magnesium–manganese dioxide dry cells, **34**, 13
experimental and theoretical investigation of voltage transients of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 295

Dry charging
quality-control techniques for dry charging lead/acid batteries, **19**, 189

Drying
on thermopassivation of positive lead/acid battery electrodes. Part I. The influence of drying positive dry-charged lead/acid battery electrodes on thermopassivation and its causes, **7**, 201
Duty cycle
the design **17**, 239
Dynamics
dynamics of dendritic growth, **26**, 121
Dynamometer tests
comparison of laboratory, dynamometer, and road tests of an EV, **17**, 279

Economic prospects
economic prospects for the application of new electric energy storage devices, **3**, 331
Elastomeric networks
mechanism of high ionic conductivity in elastomeric networks, **9**, 389
Elective replacement indicator
elective replacement indicator for implantable lithium cells, **14**, 83
Electrical breakdown
electrical breakdown phenomena in $(PEO)_xLiF_3CSO_3$ ion-conducting polymers, **40**, 271
Electrical capacity
comments on "Effect of chemisorbed water on the electrical capacity of the lead/acid battery positive plate", **22**, 175
effect of chemisorbed water on the electrical capacity of the lead/acid battery positive plate, **19**, 15
reply to comments on "Effect of chemisorbed water on the electrical capacity of the lead/acid battery positive plate", **22**, 179
Electrical characteristics
electrical characteristics of a highly hydrated battery grade manganese dioxide powder, **4**, 77
Electrical conductivity
central role of electrode interconnection material in high temperature fuel cell batteries. Part II. Study of selected highly conducting mixed oxides, **1**, 203
electrical conductivity of binary cells of type silver iodide–piperazinium and *N,N'*-alkyl-piperazinium diiodides, **1**, 359
electrical conductivity of KCu_4I_5, **1**, 103
electrical conductivity of the Li_2SO_4/Li_2CO_3 system, **10**, 191
electrical conductivity of a new solid electrolyte glass material Li_2O–$LiNbO_3$–B_2O_3, **13**, 151
electrical conductivity of a system of Ag_2SO_4:AgI eutectic added to $30Li_2SO_4$:$70Ag_2SO_4$, **27**, 323
Electrical energy
reverse electrodialysis: study of electrical energy obtained from two solutions of different salinity, **10**, 203
Electrical performance
an automatic system for assessing the electrical performance of electrodes and batteries, **8**, 99
Electrical potential
manganese dioxide electrode. VII. Experimental determination and a simple theoretical description of the electrical potential of solid solutions in the range γ-MnO_2 to δ-MnOOH, **8**, 113
Electrical properties
electrical properties of nickel hydroxide for alkaline cell systems, **48**, 361
studies on the electrical properties of P2VP·nI_2 complexes, **26**, 557
Electric capacitors
new solid-state electric double-layer capacitor using poly(vinyl alcohol)-based polymer solid electrolyte, **36**, 87
Electric current
electric current from the direct conversion of low molecular weight C, H, O-compounds, **1**, 141
Electric energy
performance testing of 10 kW-class advanced batteries for electric energy storage systems in Japan, **24**, 137
Electric energy storage devices
economic prospects for the application of new electric energy storage devices, **3**, 331
Electric motor cycles
development of electric motor cycle technologies in Taiwan, **48**, 243
Electric power
optimisation of thermoelectric module geometry for 'waste heat' electric power generation, **38**, 253

Electric utilities
an electrochemically regenerative hydrogen/chlorine energy storage system for electric utilities, **2**, 191
Electric vehicle battery(ies)
innovative on-board instrumentation of EV battery characterization, **17**, 215
rationale and methodology for group testing of electric vehicle batteries, **17**, 97
requirements fr EV-batteries and consequences for test procedures, **17**, 75
Electric vehicle battery programme
Australian EV battery programme, **7**, 313
Japanese EV battery programme, **7**, 331
U.S.A. EV battery programme **7**, 317
Electric vehicles
advanced high-temperature batteries, **29**, 565
alternative strategy for introducing electric vehicles, **40**, 23
battery requirements for electric vehicles, **45**, 61
battery systems for electric vehicles - a state-of-the-art review, **4**, 101
CITELEC – electric vehicles on the move in Europe's cities, **40**, 17
the clean air LA301 electric vehicle for the Los Angeles electric vehicle initiative, **40**, 27
comparison of laboratory, dynamometer, and road tests of an EV, **17**, 279
crystalline phase composition of positive plates in lead/acid traction batteries under simulated electric vehicle service, **8**, 175
the design, electric vehicle simulation program, and duty cycle for a computer-controlled bench test of lead/acid batteries, **17**, 239
driving cycle testing of electric vehicle batteries and systems, **40**, 73
electric vehickes – are they a realistic option for the future?, **42**, 291
electric vehicle drive systems, **37**, 189
examination of battery-related electric vehicle track and field measurements, **17**, 248
gelled-electrolyte batteries for electric vehicles, **40**, 47
laboratory-scale evaluation of secondary alkaline zinc batteries for electric vehicles, **47**, 1
lead/acid – still top of the galvanic traction pile in 1983, **11**, 119
lead/acid traction batteries for electric road vehicle propulsion – directions for research and development, **5**, 221
NERDDC workshop on power sources for electric vehicles, **7**, 311
an overview of the development of lead/acid traction batteries for electric vehicles in India, **38**, 165
performance testing of advanced lead/acid batteries for electric vehicles, **16**, 107, **17**, 144
prospects for the application of fuel cells in electric vehicles, **37**, 201
pulse power tests on nickel oxide electrodes for nickel/zinc eletric vehicle batteries, **21**, 33
statistical analysis of performance degradation of lead/acid battery under simulated electric vehicle operations, **24**, 215
submarine battery technology – an aid to electric vehicle battery design?, **40**, 113
tubular positive plate batteries for motive power and electric vehicle aplciations, **40**, 39
Electrification
market potential for lead/acid batteries for rural electrification needs in India, **23**, 221
Electrocatalysis
electrocatalysis of the oxygen reduction process on metal chelates in acid electrolyte, **2**, 233
influence of metal ions on the electrocatalytic oxygen reduction of carbon materials prepared from pyrolyzed polyacrylonitrile, **38**, 327
Perovskite-type oxides: oxygen electrocatalysis and bulk structure, **22**, 387
Electrocatalysts
electrocatalysts for oxygen electrodes in fuel cells and water electrolyzers for space applications, **29**, 413
high surface area dual function oxygen electrocatalysts for space power applications, **22**, 409
non-noble electrocatalysts for alkaline fuel cells, **29**, 437
study of polymeric iron phthalocyanine as electrocatalyst for reduction of oxygen in acidic electrolytes, **2**, 351

Electrocatalytic activity
effect of counter cations on electrocatalytic activity of oxide pyrochlores towards oxygen reduction/evolution in alkaline medium: an electrochemical and spectroscopic study, **35**, 163
Electrochemcial power sources
progress and future efforts in solving major problems of electrochemical power sources, **11**, 163
Electrochemcial process
electrochemical processes in a high power Li–SO_2 source, **10**, 377
Electrochemcial reactions
the kinetics of electrochemical reactions on high temeprature fuel cell electrodes, **49**, 257
Electrochemical activity
elecrochemical activity of some different iron polyphthalocyanines for the oxygen reduction reaction in acidic medium, **6**, 35
Electrochemical aspects
electrochemical aspects of the deintercalation of layered AMO_2 compounds, **14**, 231
Electrochemical behaviour
characterization of nickel oxide in molten carbonate. I. Electrochemical behaviour of higher nickel oxide in molten carbonate, **32**, 125
effect of benzotriazole on the electrochemical behaviour of cadmium in alkaline solutions, **34**, 313
effects of antimony on the electrochemical behaviour of lead dioxide in sulphuric acid, **9**, 221
electrochemical behavior of graphite intercalated by fluorine, **14**, 149
the electrochemical behavior of polysulfides in tetrahydrofuran, **14**, 129
electrochemical behaviour of α-cobalted nickel hydroxide electrodes, **36**, 497
electrochemical behaviour of amorphous $V_2O_5(-P_2O_5)$ cathodes for lithium secondary batteries, **20**, 173
electrochemical behaviour of iron oxide electrodes in alkali solutions, **32**, 277
electrochemical behaviour of lead oxides in aprotic organic electrolyte solution, **21**, 105
electrochemical behaviour of metallic oxides, **4**, 183
electrochemical behaviour of metal sulfides as cathodes in primary lithium batteries, **14**, 65
electrochemical behaviour of vanadium(V)/vanadium(IV) redox couple at graphite electrodes, **39**, 1
influence of H_3PO_4 on the electrochemical behaviour of the PbO_2 electrode, **38**, 261
the influence of preparation conditions on the electrochemical behaviour of CuO in a Li/CuO cell, **14**, 269
influence of water addition on structural and electrochemical behaviour of liquid ammoniates: a study of Li-$ClO_4 \cdot 4NH_3$ ammoniate/H_2 mixtures, **20**, 305
$(Mo_{0.3}V_{0.7})_2O_5$ as a solid solution cathode for Li cells. Part I. Electrochemical behaviour of primary cells, **7**, 133
solid electrolyte interphase (SEI) electrodes. Part VII. The electrochemical behaviour of calcium in $Ba(AlCl_4)_2$ and $Sr(AlCl_4)_2$-thionyl chloride solutions (extended abstract), **26**, 423
some effects of cobalt hydroxide upon the electrochemical behaviour of nickel hydroxide electrodes, **25**, 89
surface film effect on the electrochemical behaviour of active metals, **22**, 99
thin foil lithium/aluminum electrodes. The effect of thermal treatment on its electrochemical behaviour in nonaqueous media, **24**, 71
unusual effects of ammonium ligno-sulfonate on the electrochemical behaviour of lead, lead–calcium, and lead–antimony alloys, **40**, 323
Electrochemical capacitors
conducting polymers as active materials in electrochemical capacitors, **47**, 89
some recent studies with the solid-ionomer electrochemical capacitor, **36**, 341
Electrochemical cells
the development of beta-alumina for use in electrochemical cells: a survey, **3**, 1
on electrochemical photovoltaic cells formed with $CuInS_2$ films, **21**, 59
evaluation and optimization of pelletized LiAl/$NaAlCl_4$/$MoCl_5$ electrochemical cells, **3**, 81

exploratory studies on some electrochemical cell systems, **34**, 71
improvement of solid electrolyte conductivity and cathodic properties of the $Li|LiI \cdot H_2O(SiO_2)|PbI_2$ electrochemical cell, **38**, 345
mathematics of coiling in cylindrical electrochemical cells: the theory of a spiral bounded by two circles and its application to the spiral-wound nickel/cadmium cell, **3**, 311
physicochemical techniques in the investigation of electrochemical cells, **34**, 175
primary and secondary room temeprature molten salt electrochemical cells, **15**, 109
thermal behavior of electrochemical cells by liquid crystal display, **14**, 321
Electrochemical characteristics
electrochemical characteristics of MnO_2–V_2O_5 composites serving as positive material for secondary lithium batteries, **35**, 313
electrochemical characteristics of polyacetylene in organic electrolytes, **14**, 31
electrochemical and structural characteristics of niobium(V) oxide in a rechargeable lithium battery, **20**, 193
the lithium/manganese dioxide cell. IV. Relationship between physicochemical properties and electrochemical characteristics of MnO_2 in nonaqueous electrolytes, **35**, 175
preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery, **5**, 89
structural and electrochemical characteristics of plastic (PTFE) bonded nickel hydroxide electrodes, **12**, 195
Electrochemical determination
electrochemical determination of the anode film resistance and double layer capacitance in magnesium/manganese dioxide dry cells, **15**, 27
Electrochemical energy sources
advanced electrochemical energy sources for space power systems - a review, **4**, 11
Electrochemical experiments
computer-controlled multiple-channel system for electrochemical expeirments, **10**, 149
Electrochemical formation
the secondary lithium/aluminium electrode at room temperature. II. Kinetics of the electrochemical formation of the lithium–aluminium alloy, **12**, 155
Electrochemical generation
the electrochemical generation of useful chemical species from lunar materials, **22**, 285, **29**, 321
Electrochemical generators
a reversible graphite/lithium negative electrode for electrochemical generators, **9**, 365
Electrochemical impedance spectroscopy
the application of electrochemical impedance spectroscopy for characterizing the degradation of $Ni(OH)_2$/NiOOH electrodes, **29**, 477
non-destructive characterization of sealed lead/acid battery cells with electrochemical impedance spectroscopy, **32**, 261
Electrochemical impregnation
electrochemical impregnation bath aging, **12**, 277
a lightweight nickel composite electrode. II. Elecrochemical impregnation, **16**, 131
Electrochemical insertion
electrochemical insertion of lithium in manganese dioxide, **14**, 141
Electrochemical intercalation
electrochemical intercalation of fluorides into pyrographite, **13**, 1
Electrochemical investigations
electrochemical investigations on the kinetics of the growth of PbO_2 layers on lead, **13**, 101
electrochemical investigations of the stationary and non-stationary behaviour of the PbO_2 electrode, **16**, 293
Electrochemical lithiation
electrochemical lithiation of Pb_3O_4, **34**, 353
inhomogeneous electrochemical lithiation of V_2O_5–TeO_2 binary glasses in a propylene carbonate solution, **44**, 645
Electrochemical measurements
electrochemical measurements and surface studies on acid oxygen carbon electrodes by the use of the ESCA method, **2**, 183

Electrochemical methods
electrochemical method for improving the spectral response of CdS/Cu_2S heterojunctions, **13**, 85
electrochemical method for studying the reversibility of the lithium intercalation in secondary batteries, **9**, 321
Electrochemical oxidation
studies of the elctrochemical oxidation of methanol on platinum in phosphoric acid solution, **36**, 11
Electrochemical parameters
plastic-bonded electrodes for nickel/cadmium accumulators. II. Basic electrochemical parameters of the nickel oxide electrode, **4**, 239
Electrochemical performance
effect of electrolyte impurity on the electrochemical performance of the lead/tetrafluoroboric acid/lead dioxide cell, **3**, 267
electrochemical performance of silver/molybdotungstate-amorphous-electrolyte cells with charge-transfer-complex cathodes, **25**, 287
influence of the electrolyte content of oxygen carbon gas-diffusion electrodes on their electrochemical performance in acid solutions, **3**, 245
silver arsenate amorphous electrolyte batteries: conduction characteristics and electrochemical performance, **34**, 339
Electrochemical power sources
a brief review of progress in electrochemical power sources, **11**, 111
oxygen-reducing porous carbon electrode for electrochemical power sources with alkaline electrolytes, **10**, 333
position and development of electrochemical power sources, **11**, 185
Electrochemical processes
chemical and electrochemical processes in some lithium/liquid cathode batteries, **34**, 81
electrochemical phase-formation processes at a mercury electrode in sulfuric acid, **32**, 401
Electrochemical properties
comparison of the physical, chemical and electrochemical properties of rayon- and polyacrylonitrile-based graphite felt electrodes, **45**, 29
effect of changes in engineering design on the distribution of reaction products and the electrochemical properties of tubular electrodes, **10**, 71
electrochemical properties of active carbon in acid and alkaline electrolytes, **1**, 285
influence of the active surface and pore structure on the electrochemical properties of porous electrodes, **9**, 73
manganese dioxide — A review of a battery chemical. Part II. Solid state and electrochemical properties of manganese dioxides, **16**, 1
the preparation and electrochemical properties of chromium oxides CrO_x both in lithium and sodium aprotic electrolytes, **39**, 133
preparation and electrochemical properties of double-metal nitrides containing lithium, **20**, 311
some aspects on the preparation, structure and physical and electrochemical properties of Li_xC_6, **43**, 39
a study of the electrochemical properties of lead-strontium alloys for lead/acid batteries, **33**, 21
Electrochemical reactions
electrochemical reactions in power sources and sinks: personal reflections on progress and future prospects, **11**, 171
electrochemical reactions on some cemented metal carbides, **6**, 229
kinetic studies of the electrochemical reaction between lithium and phthalocyanine, **14**, 71
kinetic studies of the electrochemical reaction between lithium and phthalocyanine. II. Reduction reaction mechanism, **16**, 45
Electrochemical reactivity
electrochemical reactivity of the CrO_3/graphite system in ammonium chloride solution, **32**, 195
Electrochemical reduction
on the catalytic properties of mixed oxides for the electrochemical reduction of oxygen, **32**, 253
the electrochemical reduction of oxygen on cobalt-cemented tungsten carbide, **9**, 1
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as

catalysts for the electrochemical reduction of oxygen in acid electrolytes, **13**, 217
influence of macrocyclic compounds on the electrochemical reduction of thionyl chloride at glassy carbon cathodes, **36**, 127
Electrochemical reversibility
structure and electrochemical reversibility of alkaline metal intercalation compounds capable of being reduced in non-aqueous media, **9**, 167
Electrochemical solar cells
elecrochemical solar cells with layer-type semiconductor anodes. Performance of *n*-$MoSe_2$ cells, **6**, 371
Electrochemical storage systems program summary
aqueous Nonflow batteries, **11**, 309
battery testing, **11**, 345
electrochemical processes, **11**, 277
electrochemical systems research, **11**, 206
flow batteries, **11**, 323
fuel cells for vehicles, **11**, 287
nonaqueous batteries, **11**, 335
supporting research, **11**, 233
Electrochemical systems
heat generation of electrochemical systems. Batteries, **46**, 29
impedance of porous electrochemical systems: study of the negative active mass of the lead/acid battery, **30**, 269
a low-cost, computer-aided electrochemical system for characterizing battery electrodes, **32**, 99
Electrochemistry
a comparative electrochemical study of MoO_3, V_2O_5 and MoV_2O_8 as rechargeable cathodes in lithium cells, **24**, 85
conductive polymers: new tools and materials for electrochemistry, **14**, 11
effect of counter cations on electrocatalytic activity of oxide pyrochlores towards oxygen reduction/evolution in alkaline medium: an electrochemical and spectroscopic study, **35**, 163
effects of bismuth on the electrochemical performance of lead/acid batteries, **28**, 69
effect of zinc and iron ions of the electrochemistry of nickel oxide electrode: slow cyclic voltammetry, **47**, 79
electrochemical behaviors of Li^+ ion conductor, Li_3PO_4–Li_2S–SiS_2, **43**, 135
electrochemical behaviour of some activated manganese ores, **34**, 207
electrochemical and catalytic reactivity of manganese dioxides, **35**, 91
electrochemical characterization of flat-plate rechargeable alkaline manganese dioxide/zinc cells, **47**, 13
electrochemical characterization of new conducting polymer electrolytes, **45**, 161
electrochemical investigation of lead-calcium alloys in sulfuric acid, **21**, 151
an electrochemical investigation of the temperature dependence of inorganic electrolytes in rechargeable lithium batteries, **26**, 511
electrochemical and spectroscopic studies of carbon electrodes in lithium battery electrolyte systems, **43**, 47
electrochemical and structural studies of the composite MnO_2 cathode doped with metal oxides, **44**, 533
electrochemical studies of P3-MT electrodes in $LiAlCl_4$–SO_2 electrolyte (extended abstract), **26**, 553
electrochemical studies on a zinc–lead–cadmium alloy in aqueous ammonium chloride solution, **47**, 177
electrochemical study of the passivating layer on lithium intercaleted carbon elctrodes in nonaqueous solvents, **43**, 65
an electrochemical study of PEO:$LiBF_4$-glass composite electrolytes, **47**, 63
electrochemistry of anatase titanium dioxide in lithium nonaqueous cells, **14**, 153
electrochemistry of L-niobium pentoxide in a lithium/non-aqueous cell, **19**, 287
on the electrochemistry of the nonaqueous lithium cell, **11**, 93
electrochemistry of a nonaqueous lithium/sulfur cell, **9**, 281
the electrochemistry of the porous lead electrode in sulfuric acid — a selective review, **6**, 101
the electrochemistry of porous zinc. II. The polarisation behaviour of plain and polymer-bonded microelectrodes in KOH solutions, **15**, 245
the electrochemistry of porous zinc. IV. The Faradaic impedance of plain

and polymer-bonded porous electrodes in KOH solutions, **15**, 61
the electrochemistry of porous zinc. V. The cycling behaviour of plain and polymer-bonded porous electrodes in KOH solutions, **15**, 261
electrochemistry, power sources and energy science, **5**, 143
the electrochemistry of some primary cells incorporating zinc electrodes, **9**, 205
further electrochemical studies on Li/LiV_2O_4 secondary cells, **34**, 199
influence of antimony on the electrochemical behaviour and the structure of the lead dioxide active mass of lead/acid batteries, **42**, 71
influence of the operating conditions and of the ageing upon the electrochemical performance of a phosphoric acid fuel cell, **42**, 365
influence of phosphoric acid on both the electrochemistry and the operating behaviour of the lead/acid system, **33**, 213
influence of phosphoric acid on the electrochemistry of lead electrodes in sulfuric acid electrolyte containing antimony, **46**, 1
introduction to the scaling properties in elctrochemistry: from the "TEISI" model to the lithium fractal ordering in Li_xFeS_2 layered structure, **9**, 359
investigations into the electrochemistry of recombinant, sealed lead/acid batteries, **42**, 165
preparation and electrochemical characteristics of new Li/Mn/V/O system as positive materials for rechargeable lithium batteries, **44**, 635
review of the structure and the electrochemistry of nickel hydroxides and oxyhydroxides, **8**, 229
structural and electrochemical characteristics of a hollandite-type 'Li_xMnO_2', **44**, 657
structure and electrochemistry of the spinel oxides $LiTi_2O_4$ and $Li_{4/3}i_{5/3}O_4$, **26**, 397
surface preparation of planar lead electrodes for electrochemical studies in sulphuric acid solutions, **34**, 289
thermal efficiency of electrochemical systems. Thermal self-destruction of highly energy-intensive lithium power sources, **45**, 303
vanadium-doped lithium thiochromite: properties, crystal structure and electrochemical performance in rechargeable Li cells, **34**, 129
Electro-codeposition
improvement of heavy-drain discharge properties of polypyrrole cathode by the electro-codepositionof carbon powder, **44**, 611
Electrode characteristics
investigation of positive elecrode characteristics in high rate Li/$SOCl_2$ cells, **10**, 343
Electrode contaminations
cycling of β-LiAl in organic electrolytes – effect of electrode contaminations and electrolyte additives, **14**, 193
Electrode impedance spectroscopy
passivating films on lithium electrodes. An approach by means of electrode impedance spectroscopy, **14**, 45
study by electrode impedance spectroscopy of the properties of lithium surface layers in aprotic organic electrolytes (extended abstract), **26**, 571
Electrode interconnection material
central role of electrode interconnection material in high temperature fuel cell batteries. Part I. Choice of materials – a review, **1**, 91
central role of electrode interconnection material in high temperature fuel cell batteries. Part II. Study of selected highly conducting mixed oxides, **1**, 203
Electrode-kinetic parameters
digital simulation of galvanostatic current–potential data for gas-diffusion electrodes and estimation of electrode-kinetic parameters, **50**, 177
Electrode kinetics
effect of gelling on the electrode kinetics of the Pb/$PbSO_4$ and hydrogen-electrode reactions in maintenance-free lead/acid batteries, **50**, 67
Electrode materials
evaluation of electrode meterials for vanadium redox cell, **19**, 45
glasses as electrolytes and electrode materials in lithium batteries (extended abstract), **26**, 33

graphite oxyfluoride: behaviour as electrode material in lithium batteries, **48**, 311
multinary alloy electrodes for solid state batteries. I. A phase diagram approach for the selection and storage properties determination of candidate electrode materials, **38**, 351
multinary alloy electrodes for solid state batteries. II. A new Li–Si–Mg alloy negative electrode material for use in high energy denisty rechargeable lithium cells, **38**, 363
new graphite fluorides as electrode materials in lithium batteries, **27**, 81
new graphite fluorides as electrode materials in lithium batteries (extended abstract), **26**, 525
niobium triselenide: a unique rechargeable positive electrode material, **26**, 65
structural analysis of alkaline fuel cell electrodes and electrode materials, **25**, 195
studies of carbon as negative electrode materials for secondary lithium batteries, **44**, 399
a study of positive electrode materials for batteries operating in halide-aluminate medium, **3**, 215
vanadium oxides as electrode materials for rechargeable lithium cells, **20**, 165

Electrode matrix
new negative electrode matrix, BC_2N, for rechargeable lithium batteries, **43**, 75

Electrodeposition
the electrodeposition of zinc onto graphitic carbon substrates from alkaline electrolytes, **24**, 21

Electrode potentials
oscillations of electrode potentisls in sealed lead/acid cells, **45**, 325

Electrode processes
electrode processes at the lithium/polymer elecrolyte interface, **18**, 75
kinetic barriers to the preferred electrode process in subzero battery electrolytes, **8**, 83

Electrode properties
effect of non-stroichiometry on the electrode properties of zirconium diselenide in lithium/polymer electrolyte batteries (extended abstract), **26**, 273

Electrode reactions
volatile products of electrode reactions in inorganic electrolyte, **44**, 727

Electrodialysis
reverse electrodialysis: study of electrical energy obtained from two solutions of different salinity, **10**, 203

Electrolyte additives
electrolyte additives for zinc-anoded secondary cells, **28**, 345
electrolyte additives for zinc-anoded secondary cells. II. Quaternary ammonium compounds, **32**, 31
the influence of electrolyte additives on the anodic dissolution of aluminum in alkaline solutions, **5**, 245

Electrolyte agitation
effect of electrolyte agitation on the performance of lead/acid traction battteries at various temepratures, **13**, 137

Electrolyte composition
lithium/graphitic oxide cells. Part IV: Influence of electrolyte and cathode composition, **20**, 105

Electrolyte content
influence of the electrolyte content of oxygen carbon gas-diffusion electrodes on their electrochemical performance in acid solutions, **3**, 245

Electrolyte creepage
electrolyte creepage in galvanic cells. I. Contribution to the phenomena, **8**, 257
electrolyte creepage in galvanic cells. II. Transport mechanism at high pressures, **8**, 267

Electrolyte diffusion
modeling the effects of electrolyte diffusion and paste conductivity on lead/acid battery performance, **46**, 49

Electrolyte fill
electrolyte fill quantity and limiting capacity in sealed nickel/cadmium cells, **32**, 19

Electrolyte flow
effects of electrolyte flow on the performance of lead/acid cells, **22**, 115

Electrolyte impurity
effect of electrolyte impurity on the electrochemical performance of the lead/tetrafluoroboric acid/lead dioxide cell, **3**, 267

Electrolyte purity
influence of separators, expanders and electrolyte purity on the performance of maintenance-free lead/acid batteries, **31**, 183
Electrolyte solutions
properties and structures of electrolyte solutions for lithium batteries, **14**, 39
Electrolyte solvation
electrolyte solvation in aprotic solvents, **26**, 9
Electrolyte stratification
electrolyte stratification in lead/acid batteries: effect of grid antimony and relationship to capacity loss, **46**, 239
Electrolyte temperature
influence of electrolyte temperature and positive-plate thickness on the performance of lead/acid cells, **31**, 271
Electrolytic properties
additive effects of Li^+ ion solvation compounds on $LiClO_4$–propylene carbonate electrolytic properties, **12**, 53
Electrolyzers
electrocatalysts for oxygen electrodes in fuel cells and water electrolyzers for space applications, **29**, 413
hydrogen-oxygen proton-echange membrane fuel cells and electrolyzers, **29**, 399
recent advances in SPE® water electrolyzer, **47**, 369
Electromotive force
the electromotive force of the lead/acid cell and its half-cell potentials, **35**, 197
Electron aspects
electron and phonon aspects in a lithium intercalated InSe cathode, **20**, 213
Electronic conductivity
the capacity limiting role of the electronic conductivity of the active material in lead/acid batteries during discharge, **7**, 281
electronic conductivity of battery active masses – a limiting factor?, **5**, 255
the electronic conductivity of compact lead dioxide samples with various stoichiometric compositions, **6**, 245
Electronics
electronics in cars: consequences for the energy-supply system, **33**, 319
Electron paramagnetic resonance
electrolytic manganese dioxides for battery applications: studies using electron paramagnetic resonance, **40**, 355
Electron spin resonance studies
the molybdenum trioxide doped manganese dioxide electrode. II. Electron spin resonance studies of doped manganese dioxides, **1**, 73
Electro-oxidation mechanisms
electro-oxidation mechanism of glyoxal on a gold electrode in acidic media, **27**, 273
Electroreduction
electroreduction of oxygen on some novel cobalt phthalocyanine complexes, **28**, 317
Energetic coefficient
the energetic coefficient in lead/acid battery positive plates, **30**, 153
Energy
analysis of power and energy for fuel cell systems, **47**, 159
cactus (*Opuntia dillenii* Grahm) stem: a new source of energy, **47**, 185
Energy consumption
accelerated cycle life testing of lead/acid golf car batteries and the influence of separator type on battery life, energy consumption and operating cost, **10**, 137
Energy conversion
energy conversion by spontaneously reacting Li/SO_2 Cells, **7**, 365
materials testing package for batteries and energy conversion systems, **20**, 81
Energy density
primary $Li/SOCl_2$ cells. X. Optimization of D cells with respect to energy density, storability and safety, **5**, 57
Energy and exergy analysis
review of an energy and exergy analysis of a fuel cell system, **41**, 239
Energy future
the role of fuel cells in our energy future, **37**, 15
Energy market
trends in the energy market after World War II (WWII), **37**, 3
Energy science
electrochemistry, power sources and energy science, **5**, 143
Energy storage

economic prospects for the application of new electric energy storage devices, **3**, 331
an electrochemically regenerative hydrogen/chlorine energy storage system for electric utilities, **2**, 191
energy storage requirements for spacecraft, **3**, 277
progress in US Government sponsored battery development (1978–1979); regenerative hydrogen/halogen energy storage systems, **5**, 377
review of flywheels for energy storage with reference to their potential for use in space, **8**, 311
utility requirements for battery energy storage and their effects on battery test programs, **17**, 88
Engineering design
effect of changes in engineering design on the distribution of reaction products and the electrochemical properties of tubular electrodes, **10**, 71
Environment
energy storage and the environment: the role of battery technology, **42**, 1
environmental impacts of energy facilities: fuel cell technology compared with coal and conventional gas technology, **35**, 37
reliability of commercial lithium button cells. I. Effect of the environment on the passivation resistance, **25**, 49
reliability of commercial lithium button cells. II. Effect of the state-of-discharge and environment on the passivation resistance, **25**, 61
Epoxy matrices
mounting of lead/acid battery positive-plate materials in epoxy matrices: an investigation of instances of excessive heating, **40**, 365
ESCA investigations
ESCA investigations on plastic-bonded nickel oxide electrodes, **13**, 123
ESCA method
electrochemical measurements and surface studies on acid oxygen carbon electrodes by the use of the ESCA method, **2**, 183
Ether
ethylene carbonate/ether solvents for elecrolytes in lithium secondary batteries, **20**, 293
recent results regarding the storage capabilities of lithium organic cells using lithium perchlorate–ether solutions as electrolyte, **15**, 191
Ethylene carbonate electrolytes
ethylene carbonate-based electrolytes for rechargeable lithium batteries, **26**, 449
Ethylene carbonate/ether electrolytes
ethylene carbonate/ether solvents for elecrolytes in lithium secondary batteries, **20**, 293
Ethylene glycol
anodic oxidation of ethylene glycol with noble metal alloy catalysts, **1**, 249
catalytic influence of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, **46**, 17
EXAFS
EXAFS: a new tool for the study of battery and fuel cell materials, **22**, 323
redox processes in the Li_xFeS_2/Li electrochemical system studied through crystal Mössbauer, and EXAFS analyses, **26**, 325
Expanded grids
resistance of expanded grids and high-rate plate performance: preliminary results, **28**, 93
variables affecting the deep-cycling characteristics of expanded-grid lead/acid battery, **33**, 187
Expander action
expander action at the Pb(Hg)/$PbCl_2$ interface, **2**, 137
Expanders
effect of hydrogen and oxygen on stability of expanders and performance of lead/acid batteries, **46**, 349
efficiency of lignosulfonates and humic-related substances as expanders in negative electrodes of the lead/acid system, **50**, 131
influence of separators, expanders and electrolyte purity on the performance of maintenance-free lead/acid batteries, **31**, 183
Explosions
mechanism of explosions of Li/$SOCl_2$ power sources, **39**, 375
Extreme conditions

factors affecting the formation of lead/acid tubular positives. II. Resting and extreme conditions, **10**, 389

Failure
accelerated life cycle testing and analysis for early failure prediction using two types of lead/acid batteries, **37**, 363
analysis of the failure mechanisms in magnesium–manganese dioxide dry cells, **34**, 13
electrode kinetics of a nickel/cadmium cell and failure-mode prediction. Estimation of equivalent resistance of an internal short, **19**, 67
failure analysis of 3.5 inch, 50 ampere hour nickel/hydrogen cell, **21**, 275
failure mechanisms of lead/acid automotive batteries in service in the U.S.A., **33**, 257
failure modes of lead/acid batteries, **36**, 415
KOH concentration effect on the cycle life of nickel-hydrogen cells. IV. Results of failure analyses, **29**, 503
Raman spectral observation of a 'new phase' observed in nickel electrodes cycled to failure, **36**, 279
superiority and failure mode of automotive batteries insulated with polyethylene separators, **48**, 129
techniques to reduce failure in lead/calcium batteries using expanded type grids, **42**, 221

Failure distributions
how handy is Weibull? Or, the use of failure distributions in the planning and analysis of battery experiments, **17**, 269

Failure model
a failure model for sealed nickel/cadmium batteries, **8**, 369

Faradaic efficiency loss
an approximate model for estimating the faradaic efficiency loss in zinc/bromine batteries caused by cell self-discharge, **50**, 343

Faradaic impedance
the electrochemistry of porous zinc. IV. The Faradaic impedance of plain and polymer-bonded porous electrodes in KOH solutions, **15**, 61
the faradaic impedance of the lithium/sulfur dioxide system. A further examination of commercial cells, **19**, 7

Field measurements
examination of battery-related electric vehicle track and field measurements, **17**, 248

Field trials
philosophies and experiences of PAFC field trials, **49**, 77

Fire
the behaviour of lithium batteries in a fire, **26**, 195

Float service
a cylindrical, pure lead, lead/acid cell for float service, **4**, 309

Flooded–starved design
a flooded–starved design for nickel/cadmium cells, **18**, 161

Flow distribution
development of a 0.1 kW power accumulation pilot plant based on an Fe/Cr redox flow battery. Part 1. Considerations on flow-distribution design, **48**, 293

Flowing electrolyte batteries
flowing electrolyte batteries. Test methods and results, **17**, 127

Fluorides
electrochemical intercalation of fluorides into pyrographite, **13**, 1

Fluorine
electrochemical behavior of graphite intercalated by fluorine, **14**, 149

Flywheels
application of advanced flywheel technology for energy storage on space station, **22**, 313
review of flywheels for energy storage with reference to their potential for use in space, **8**, 311
satellite power using a magnetically suspended flywheel stack, **22**, 301

Fourier-transform infrared spectroscopy
in situ Fourier-transform infrared investigations of lead electrodes in sulfuric acid: formation of lead sulfate on lead and lead alloys, **42**, 137

Fractal analysis
the fractal analysis of battery performances (extended abstract, **26**, 179

Fractal objects
batteries, identified fractal objects, **18**, 51

Fractal ordering
introduction to the scaling properties in elctrochemistry: from the "TEISI" model to the lithium fractal ordering in Li_xFeS_2 layered structure, **9**, 359
Fuel cell anodes
mechanism of *in situ* surface modification of molten-carbonate fuel cell anode, **35**, 123
Fuel cell applications
landfill gas pretreatment for fuel cell applications, **49**, 143
Fuel cell assemblies
fuel cell assemblies with an acidic electrolyte, **1**, 177
Fuel cell battery(ies)
central role of electrode interconnection material in high temperature fuel cell batteries. Part I. Choice of materials – a review, **1**, 91
Fuel cell cathodes
corrosion testing of candidates for the alkaline fuel cell cathode, **29**, 443
Fuel cell commercialization
European opportunities for fuel cell commercialisation, **37**, 35
fuel cell commercialization – beyond the 'Notice of Market Opportunity for Fuel Cells' (NOMO), **37**, 63
a gas utility approach to fuel cell commercialisation, **37**, 75
Fuel cell electrodes
the kinetics of electrochemical reactions on high temeprature fuel cell electrodes, **49**, 257
structural analysis of alkaline fuel cell electrodes and electrode materials, **25**, 195
Fuel cell electrolytes
fuel cell electrolytes: evolution, properties and future prospects, **49**, 15
Fuel cell implementation
commercial, environmental and legislative factors that influence the implementation of fuel cells, **49**, 193
Fuel cell market
American fuel cell market development, **37**, 45
Japanese fuel cell market projections, **37**, 53
Fuel cell materials
EXAFS: a new tool for the study of battery and fuel cell materials, **22**, 323
Fuel cell power plants
prospects for advanced coal-fuelled fuel cell power plants, **49**, 143
Fuel cell program
the Tokyo Electric Power Company (TEPCO) fuel cell evaluation program, **37**, 81
Fuel cell road traction
fuel cell road traction: an option for a clean global society, **49**, 169
Fuel cells
advances in direct oxidation methanol fuel cells, **47**, 377
alkaline fuel cells at Elenco, **29**, 201
the application of Dow Chemical's perfluorinated membranes in proton-exchange membrane fuel cells, **29**, 389
application of regenerative fuel cells for space energy storage: a comparison to battery systems, **40**, 307
california clean air initiatives – the role of fuel cells, **37**, 241
carbon-based electrodes carrying platinum-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, **19**, 279
cell performance of molten-carbonate fuel cell with alkali and alkaline-earth carbonate mixtures, **39**, 285
central role of electrode interconnection material in high temperature fuel cell batteries. Part II. Study of selected highly conducting mixed oxides, **1**, 203
computer simulation of thermal modelling of alkaline hydrogen/ooxygen fuel cells, **36**, 185
cobalt and cobalt-based macrocycle blacks as oxygen-reduction catalysts in alkaline fuel cells, **45**, 219
commercialisation of fuel cells for combined heat and power (CHP) application, **37**, 101
commercialization of fuel cells as a partial energy service (extended Abstract), **37**, 265
degradation modes of alkaline fuel cells and their components, **39**, 21
the design of alkaline fuel cells, **29**, 149
design for the cold start-up of a man-portable fuel cell and hydrogen storage system, **41**, 335
development and commercialization of on-site fuel cell in Japan, **29**, 87

development and evaluation of platinum–ruthenium bimetal catalyst-based carbon electrodes for hydrogen/oxygen fuel cells in NaOH media, **45**, 139
effect of operating temperature on the performance of molten-carbonate fuel cells, **36**, 69
effect of storage conditions on the performance of phosphoric acid fuel cells, **39**, 239
efficiencies of heat engines and fuel cells: the methanol fuel cell as a competitor to Otto and Diesel engines, **7**, 215
electric Power Research Institute's role in developing fuel cell systems, **29**, 47
electrocatalysts for oxygen electrodes in fuel cells and water electrolyzers for space applications, **29**, 413
electrolyte management of molten-carbonate fuel cells, **36**, 529
electrolytes for the high temperature fuel cell; experimental and theoretical studies of the perovskite $LaAlO_3$, **3**, 67
European Space Agency fuel cell activities, **29**, 207
Fijui Electric phosphoric acid fuel cell activities, **29**, 109
from Sir William Grove to today: fuel cells and the future, **29**, 3
fuel cell applications and market opportunities, **29**, 37
fuel cell developments in Japan, **29**, 29
fuel cell energy recovery from landfill gas, **37**, 255
fuel cells and the city of the future – a Japanese view, **37**, 279
fuel cells in Europe, **29**, 133
fuel cells in Italy, **29**, 143
the fuel cell in space: yesterday, today and tomorrow, **29**, 193
fuel cells for transportation, **29**, 251
fuel cell technology and innovation, **37**, 223
the future of fuel cells for power production, **29**, 119
high energy efficiency and high power density proton exchange membrane fuel cells – electrode kinetics and mass transport, **36**, 299
highly dispersed tungsten carbide for fuel cells with an acidic electrolyte, **1**, 169
a high performance hydrogen/chlorine fuel cell for space power applications, **47**, 321
high power density proton-exchange membrane fuel cells, **47**, 353
high temperature fuel cell development in Germany (extended Abstract), **37**, 163
high temperature fuel and steam electrolysis cells using proton conductive solid electrolytes, **7**, 293
high temperature solid oxide fuel cell – technical status, **10**, 89
hydrogen and fuel cells – the clean energy system, **37**, 271
hydrogen-oxygen proton-echange membrane fuel cells and electrolyzers, **29**, 399
the importance of fuel cells to address the global warming problem, **29**, 13
improvement of molten-carbonate fuel cell (MCFC) lifetime, **39**, 369
influence of the operating conditions and of the ageing upon the electrochemical performance of a phosphoric acid fuel cell, **42**, 365
marine and naval applications of fuel cells for propulsion: the process selection, **29**, 169
mass and energy balances in a molten-carbonate fuel cell with internal reforming, **39**, 203
M-C power commercialization program for MCFC power plants, **37**, 165
mobile fuel cell development at Siemens, **37**, 209
the molten carbonate fuel cell programme in The Netherlands, **29**, 77
monolithic solid oxide fuel cell development, **29**, 311
nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, **46**, 61
a new way of obtaining $Li_xNi_{1-x}O$ cathodes for molten-carbonate fuel cells, **40**, 265
non-noble electrocatalysts for alkaline fuel cells, **29**, 437
a novel Pd–Ag membrane anode for alkaline fuel cells suitable for CO_2-

containing hydrogen, **45**, 93
oxygen electrodes for rechargeable alkaline fuel cells – II, **29**, 423
oxygen electrodes for rechargeable alkaline fuel cells. III, **36**, 323
performance goals in RFC development for low earth orbit space missions, **45**, 187
a perspective on PAFC commercialization by Fuji Electric, **37**, 119
the physical and chemical state of phosphoric acid fuel cell assemblies after long term operation: surface and near-surface analysis, **36**, 137
possible fuel cell applications for ships and submarines, **29**, 181
preparation and measurement of air electrodes for alkaline fuel cells, **32**, 233
prospects for the application of fuel cells in electric vehicles, **37**, 201
proton exchange membrane fuel cell systems engineering at Vickers Shipbuilding and Engineering Limited (VSEL), **37**, 155
proton-exchange membrane regenerative fuel cells, **47**, 343
pyrolyzed macrocycles on high surface area carbons for the reduction of oxygen in alkaline fuel cells, **36**, 547
recent advances in solid polymer electrolyte fuel cell technology with low platinum loading electrodes, **29**, 367
the renaissance of the solid polymer fuel cell, **29**, 239
the role of fuel cells in our energy future, **37**, 15
simplex optimization of carbon electrodes for the hydrogen/oxygen membrane fuel cell, **1**, 323
simulation studies on the performance of the hydrogen electrode bonded to proton exchange membranes in the hydrogen/bromine fuel cell, **28**, 301
solid oxide fuel cell developments at Westinghouse, **37**, 133
solid oxide fuel cells – the next stage, **29**, 223
solid polymer fuel cell developments at Ballard, **37**, 181
status of fuel cell R&D programme and perspectives for commercialization in Italy, **37**, 111
structural analysis of alkaline fuel cell electrodes and electrode materials, **25**, 195
study of electrolyte management in phosphoric acid fuel cells, **37**, 347
surface modification of nickel electrodes for molten carbonate fuel cells, **24**, 207
system development and commercialisation activities by Kinetic Tchnology International Group (KTI)/Mannesmann, **37**, 141
system mass optimization of hydrogen/oxygen based regenerative fuel cells for geosynchronous space missions, **38**, 303
techniques for the determination of ohmic drop in half-cells and full cells: a review, **2**, 121
technological status of nickel oxide cathodes in molten carbonate fuel cells, **24**, 1
technology development and market introduction of PAFC systems, **29**, 71
thermal efficiency of solid electrolyte fuel cells with mixed conduction, **1**, 311
Tokyo Electric Power Company approach to fuel cell power production, **29**, 97
US Department of Energy fuel cell program for transportations applications, **37**, 171
Westinghouse air-cooled PAFC technology, **29**, 59

Fuel cell system integration
fundamentals of fuel cell system integration, **49**, 37

Fuel cell systems
analysis of power and energy for fuel cell systems, **47**, 159
review of an energy and exergy analysis of a fuel cell system, **41**, 239

Fuel cell technology
advances in solid polymer electrolyte fuel cell technology with low platinum loading electrodes, **22**, 359
environmental impacts of energy facilities: fuel cell technology compared with coal and conventional gas technology, **35**, 37

Future
does lead have a future? A twenty-year vision, **48**, 17

electric vehickes — are they a realistic option for the future?, **42**, 291

Galvanic cells
consideration of lithium nitride halides as solid electrolytes in practical galvanic cell applications, **6**, 251
electrolyte creepage in galvanic cells. I. Contribution to the phenomena, **8**, 257
electrolyte creepage in galvanic cells. II. Transport mechanism at high pressures, **8**, 267
performance of $30Li_2SO_4:70Ag_2SO_4$ solid electrolyte in galvanic cells, **27**, 331
positive electrode for galvanic cells prepared by anodization of CrO_3–graphite intercalation compounds in aqueous sulfuric acid, **41**, 263

Galvanic elements
a new type of electrolyte for galvanic elements, **37**, 315

Galvanic power sources
a little retrospection, **11**, 107

Galvanostatic charge
impedance characteristics of sealed lead/acid cells during galvanostatic charge, **37**, 403

Galvanostatic cycling
galvanostatic cycling of lithium/titanium disulfide cells in propylene carbonate and propylene carbonate–acetonitrile electrolytes, **10**, 23
galvanostatic cycling of vanadium oxide (V_6O_{13}) in a nonaqueous secondary lithium cell, **10**, 33

Galvanostatic pulse method
investigation and production control of Li/SO_2 cells by the galvanostatic pulse method, **8**, 395

Gas detection
gas detection and minimization of gas and heat production at the end of fast charging, **40**, 105

Gas-diffusion air electrodes
on the effect of various active carbon catalysts on the behaviour of carbon gas-diffusion air electrodes. I. Alkaline solutions, **1**, 35
on the effect of various active carbon catalysts on the behaviour of carbon gas-diffusion air electrodes. II. Acid solutions, **1**, 47

Gas-diffusion electrodes
digital simulation of galvanostatic current–potential data for gas-diffusion electrodes and estimation of electrode-kinetic parameters, **50**, 177
effect of structure on porous gas-diffusion electrodes for phosphoric acid fuel cells, **50**, 261
influence of PTFE dispersion in the catalyst layer of porous gas-diffusion electrodes for phosphoric acid fuel cells, **50**, 163
the meniscus cell — partially immersed gas-diffusion electrodes. Part II. Modelling, **50**, 121
a novel approach for estimating the electrode kinetic parameters of gas-diffusion electrodes using the inflection point in steady-state current/potential data, **39**, 249

Gas evolution
gas evolution behavior of Zn alloy powder in KOH solution, **38**, 317
real-time charge efficiency monitoring and on-charge gas evolution in tall lead-acid traction cells, **27**, 155

Gasometry
corrosion of magnesium alloy in aqueous magnesium perchlorate battery electrolyte — a gasometry study, **39**, 107

Gas recombination
maintenance-free motive-power cells using gas-recombination technology, **33**, 135
poly(aniline)-coated electrodes for gas recombination in lead/acid batteries, **31**, 89
tungsten carbide electrodes for gas recombination in lead/acid batteries, **31**, 69

Gas-recombination battery(ies)
evolution of gas-recombination lead/acid cells and batteries, **31**, 3
factors influencing the performance of gas-recombination lead/acid batteries, **31**, 135
gas-recombination batteries: from basics to batteries in service, **31**, 35

Gassing behaviour
the gassing behaviour of lead/acid negative active material and development of a quality control test for lead oxide purity, **24**, 127

Gas technology
environmental impacts of energy facilities: fuel cell technology compared with coal and conventional gas technology, **35**, 37
Gelled electrolytes
gelled-electrolyte batteries for electric vehicles, **40**, 47
gelled-electrolyte lead/acid batteries for stationary and traction applications, **40**, 187
improved gelled-electrolyte lead/acid batteries for deep-discharge applications, **31**, 43
Gelling
effect of gelling on the electrode kinetics of the $Pb/PbSO_4$ and hydrogen-electrode reactions in maintenance-free lead/acid batteries, **50**, 67
Geosynchronous altitude radiation
effect of geosynchronous altitude radiation on performance of Ni/H_2 cells, **12**, 323
Germanium
recent advances in silicon–germanium alloy technology and an assessment of the problems of building the modules for a radioisotope thermoelectric generator, **19**, 247
Ginatta process
recycling of lead/acid batteries: the Ginatta process, **31**, 287
Glasses
application of silver boromolybdate glasses as electrolytes in solid-state cells, **32**, 397
enhancement of the ionic conductivity of lithium borophosphate glass: a mixed glass former approach, **25**, 257
glasses as electrolytes and electrode materials in lithium batteries (extended abstract), **26**, 33
inhomogeneous electrochemical lithiation of V_2O_5–TeO_2 binary glasses in a propylene carbonate solution, **44**, 645
V_2O_5-based glasses as cathodes for lithium batteries, **26**, 381
Glass fibre
glass fibre tube for lead/acid batteries, **23**, 93
Glass material
electrical conductivity of a new solid electrolyte glass material Li_2O–$LiNbO_3$–B_2O_3, **13**, 151
Glass microspheres
modeling lead/acid batteries that have positive electrodes containing hollow **46**, 39
Global warming
the importance of fuel cells to address the global warming problem, **29**, 13
Glyoxal
electro-oxidation mechanism of glyoxal on a gold electrode in acidic media, **27**, 273
Goddard battery model
modeling nickel/cadmium performance: planned alternations to the Goddard battery model, **18**, 179
Gold cathodes
the Au cathode in the system Li_2CO_3–CO_2–CO at 800 to 900 °C, **36**, 205
Gold electrodes
electro-oxidation mechanism of glyoxal on a gold electrode in acidic media, **27**, 273
Gold/graphite eletrodes
behaviour of the Cr(III)/Cr(II) reaction on gold/graphite electrodes. Application to redox flow storage cell, **35**, 225
Graft copolymer separators
graft copolymer separators – development and use, **9**, 101
Graphite
behaviour of the Cr(III)/Cr(II) reaction on gold/graphite electrodes. Application to redox flow storage cell, **35**, 225
discharge characteristics of graphite fluoride prepared via graphite oxide, **20**, 93
electrochemical behavior of graphite intercalated by fluorine, **14**, 149
electrochemical reactivity of the CrO_3/graphite system in ammonium chloride solution, **32**, 195
examination of the graphite additives to electrodes, **18**, 305
the influence of a CrO_3–graphite intercalation compound on the discharge characteristics of an MnO_2 cathode in alkaline electrolyte, **25**, 133
lithium graphitic oxide cells. Part V. An all-solid-state battery using graphite oxide as active cathodic material, **26**, 529

lithium/graphitic oxide cells. Part IV: Influence of electrolyte and cathode composition, **20**, 105
metallized graphite as an improved cathode material for aluminium/air batteries, **45**, 243
new graphite fluorides as electrode materials in lithium batteries, **27**, 81
new graphite fluorides as electrode materials in lithium batteries (extended abstract), **26**, 525
positive electrode for galvanic cells prepared by anodization of CrO_3–graphite intercalation compounds in aqueous sulfuric acid, **41**, 263
Graphite electrodes
comparison of the physical, chemical and electrochemical properties of rayon- and polyacrylonitrile-based graphite felt electrodes, **45**, 29
electrochemical behaviour of vanadium(V)/vanadium(IV) redox couple at graphite electrodes, **39**, 1
Graphite fluoride cathodes
discharge reaction and overpotential of the graphite fluoride cathode in a non-aqueous lithium cell, **20**, 87
Graphite/lithium negative electrodes
a reversible graphite/lithium negative electrode for electrochemical generators, **9**, 365
Graphite oxyfluoride
graphite oxyfluoride: behaviour as electrode material in lithium batteries, **48**, 311
Graphitic carbon
the electrodeposition of zinc onto graphitic carbon substrates from alkaline electrolytes, **24**, 21
Graphitic oxide
lithium/graphitic oxide cells. Part II: high specific surface area graphitic oxide as cathode material for lithium batteries, **14**, 99
Grid alloys
age-hardening of grid alloys and its effect on battery manufacturing processes, **38**, 49
grid alloys for maintenance-free deep-cycling batteries, **33**, 3
improved grid alloys for deep-cycling lead/calcium batteries, **33**, 13
Grid casting
the problem of maintaining Ca concentration in Pb–Ca alloys for grid casting, **3**, 367
Grids
aspects of lead/acid battery technology. 9. Grids, **50**, 193
solidification and mould-flow analysis of the casting of grids for lead/acid batteries, **23**, 79

Halide–aluminate medium
a study of positive electrode materials for batteries operating in halide-aluminate medium, **3**, 215
Hardening
age-hardening of grid alloys and its effect on battery manufacturing processes, **38**, 49
age hardening of a Pb–0.1wt.%Ca–0.3wt.%Sn alloy and the effects of heat during battery manufacturing on this process, **42**, 35
Hardening processes
discontinuous and continuous hardening processes in calcium and calcium–tin microalloyed lead: influence of 'secondary-lead' impurities, **33**, 27
Health
occupation health programme for lead workers in battery plants, **38**, 185
Heart
preliminary elvaluation of rechargeable lithium cells for a totally-implantable venticular assist device, **41**, 87
preliminary evaluation of nickel/cadmium cells for a totally implantable ventricular assist device, **39**, 67
Heat capacity
determination of the heat capacities of Lithium/BCX (bromine chloride in thionyl chloride) batteries, **28**, 269
Heat dissipation
calculation of the heat dissipation resulting from poor thermal conduction inside a solar collector filled with a microporous solid adsorbant, **50**, 391
heat dissipation from lithium/silver vanadium oxide cells during storage and low-rate discharge, **20**, 179
heat dissipation of high rate Li/$SOCl_2$ primary cells, **18**, 109
Heat engines
efficiencies of heat engines and fuel cells: the methanol fuel cell as a

competitor to Otto and Diesel engines, **7**, 215
Heating source
local heating source for shallow water divers, **6**, 291
Heat loss measurements
heat loss measurements on an enclosure for high temperature batteries, **9**, 11
Heat management
heat management in aluminium/air batteries: sources of heat, **50**, 331
Heterojunctions
electrochemical method for improving the spectral response of CdS/Cu_2S heterojunctions, **13**, 85
High energy density battery(ies)
a new high energy density battery system, **18**, 377
semiconductivity and solid electrolyte characteristics of surface films formed on active metal of interest in high energy density batteries, **24**, 243
High temperature applications
$Li/SOCl_2$ cells for high temperature applications, **9**, 295
High-temperature battery(ies)
advanced high-temperature batteries, **29**, 565
high temperature batteries with a solid sulfate electrolyte, **10**, 103
High temperature fuel cells
high temperature solid oxide fuel cell — technical status, **10**, 89
Hybrid cathodes
performance characteristics of Li/MnO_2–CF_x hybrid cathode jellyroll cells, **19**, 325
Hydrazine
I. Kinetics of reduction of manganese dioxide by ascorbic acid and hydrazine solutions, **22**, 133
Hydrofluoric acid
a lead/graphite accumulator using aqueus hydrofluoric acid, **12**, 9
Hydrogen
advances in nickel/hydrogen technology, **21**, 267
characterization testing of a 40 ampere hour bipolar nickel–hydrogen battery, **29**, 341
common pressure vessel Ni/H_2 battery — a demonstration of feasibility, **12**, 335
cost reductions in the nickel/hydrogen battery, **22**, 229
design for the cold start-up of a man-portable fuel cell and hydrogen storage system, **41**, 335
development and evaluation of platinum–ruthenium bimetal catalyst-based carbon electrodes for hydrogen/oxygen fuel cells in NaOH media, **45**, 139
effect of charge rate on instantaneous charge efficiency of nickel/hydrogen cells, **37**, 419
effect of geosynchronous altitude radiation on performance of Ni/H_2 cells, **12**, 323
effect of hydrogen and oxygen on stability of expanders and performance of lead/acid batteries, **46**, 349
effect of overcharge on capacity below 1 V of nickel/hydrogen cells, **21**, 45
effect of precharge on nickel/hydrogen cell storage capacity, **27**, 69
effects of charged open-stand in nickel/hydrogen cells, **50**, 383
the effects of platinum on nickel electrodes in the nickel/hydrogen cell, **36**, 253
electric current from the direct conversion of low molecular weight C **1**, 141
failure analysis of 3.5 inch, 50 ampere hour nickel/hydrogen cell, **21**, 275
hydrogen–oxygen proton-echange membrane fuel cells and electrolyzers, **29**, 399
on the hydrogen balance in sealed lead/acid batteries and its effect on battery performance, **42**, 89
hydrogen and fuel cells — the clean energy system, **37**, 271
hydrogen and order–disorder in PbO_2 in lead/acid positive plates, **25**, 313
impact of Shuttle environment on prelaunch handling of nickel/hydrogen batteries, **18**, 275
impedance studies of nickel/cadmium and nickel/hydrogen cells using the cell case as a reference electrode, **29**, 467
4.5 inch diameter IPV nickel/hydrogen cell development program, **18**, 279
inhibition of hydrogen evolution by antimony contaminated lead electrodes

in sulfuric acid electrolyte, **28**, 381
kinetics of hydrogen-evolution reaction on lead and lead-alloy electrodes in sulfuric acid electrolyte with phosphoric acid and antimony additives, **48**, 371
KOH concentration effect on the cycle life on nickel/hydrogen cells. III. Cycle life test, **22**, 213
KOH concentration effect on the cycle life of nickel-hydrogen cells. IV. Results of failure analyses, **29**, 503
lightweight, direct-radiating nickel/hydrogen batteries, **18**, 245
lightweight nickel electrodes for nickel/hydrogen cells, **45**, 195
long-term storage of nickel/hydrogen cells, **22**, 221
methanol oxidation and hydrogen reactions on NiZr in acid solution, **45**, 291
migration of cobalt in nickel oxide/hydroxide active material of a nickel electrode in a Ni/H_2 cell, **50**, 57
minor elements in lead materials used for lead/acid batteries. 1. Hydrogen- and oxygen-gassing characteristics, **48**, 219
multi-mission nickel/hydrogen battery cell for the 1990s, **29**, 533
multiple cell common pressure vessel nickel–hydrogen battery, **36**, 375
a new concept for high-cycle-life LEO: rechargeable MnO_2–hydrogen batteries, **29**, 333
nickel–hydrogen capacity loss on storage, **29**, 541
noble metal-free catalysts for the hydrogen/oxygen recombination in sealed lead/acid batteries using immobilized electrolytes, **40**, 175
a novel Pd–Ag membrane anode for alkaline fuel cells suitable for CO_2-containing hydrogen, **45**, 93
performance of a duel anode nickel–hydrogen battery, **36**, 363
physical and chemical analysis of a Ni/H_2 cell, **36**, 269
real time charge efficiency monitoring for nickel electrodes in nickel/cadmium and nickel/hydrogen cells, **21**, 327
recent advances in nickel/hydrogen technology at NASA Lewis Research Center, **18**, 235
a self-limiting hydrogen/oxygen recombination device, **8**, 211
system mass optimization of hydrogen/oxygen based regenerative fuel cells for geosynchronous space missions, **38**, 303
test summary for advanced hydrogen cycle nickel/cadmium cell, **21**, 339
Hydrogen/bromine battery(ies)
advanced hydrogen electrode for a hydrogen/bromine battery, **22**, 293
Hydrogen/bromine fuel cells
simulation studies on the performance of the hydrogen electrode bonded to proton exchange membranes in the hydrogen/bromine fuel cell, **28**, 301
theoretical performance of a hydrogen/bromine rechargeable SPE fuel cell, **22**, 423
Hydrogen/chlorine energy storage system
an electrochemically regenerative hydrogen/chlorine energy storage system for electric utilities, **2**, 191
Hydrogen/chlorine fuel cells
a high performance hydrogen/chlorine fuel cell for space power applications, **47**, 321
Hydrogen electrodes
advanced hydrogen electrode for a hydrogen/bromine battery, **22**, 293
influence of bonding and filling agents on the activity of tungsten carbide hydrogen electrodes, **1**, 277
influence of composition on the activity of tungsten carbide-diffusion hydrogen electrodes, **3**, 237
simulation studies on the performance of the hydrogen electrode bonded to proton exchange membranes in the hydrogen/bromine fuel cell, **28**, 301
Hydrogen evolution
the effect of the method of preparation on the catalytic activity of tungsten carbide for hydrogen evolution, **5**, 197
effect of some elements on oxygen reduction and hydrogen evolution at lead/acid battery negative plates, **22**, 1
hydrogen evolution on lead–tin alloys, **17**, 361
the hydrogen evolution reaction on lead-bismuth alloys, **22**, 11

kinetics of hydrogen evolution reaction on lead/acid battery negative plates with silicate and antimony added to the electrolyte, **30**, 169
temperature dependence of hydrogen evolution reaction on nickel oxide electrode in sealed nickel/cadmium cells, **45**, 247
Hydrogen fuel cells
ammonia as a feedstock for a hydrogen fuel cell; reformer and fuel cell behaviour, **49**, 271
Hydrogen/halogen energy storage systems
progress in US Government sponsored battery development (1978–1979); regenerative hydrogen/halogen energy storage systems, **5**, 377
Hydrogen/oxygen fuel cells
computer simulation of thermal modelling of alkaline hydrogen/ooxygen fuel cells, **36**, 185
Hydrogen/oxygen membrane
simplex optimization of carbon electrodes for the hydrogen/oxygen membrane fuel cell, **1**, 323
Hydrogen peroxide
II. Kinetics of the catalytic decomposition of hydrogen peroxide solution by manganese dioxide samples, **22**, 149
Hydrogen pressure
measures for minimizing hydrogen pressure in sealed lead/acid batteries, **31**, 107
Hydrogen storage
alloys for hydrogen storage in nickel/hydrogen and nickel/metal hydride batteries, **47**, 261
Hydrogen sulfide
hydrogen sulfide and sulfur dioxide evolution from a valve-regulated lead/acid battery, **48**, 277
Hydrogen uranyl phosphate tetrahydrate
battery and other applications of a new proton conductor: hydrogen uranyl phosphate tetrahydrate, $HUO_2PO_{PO}\cdot{}^4H_2O$, **3**, 105
Hydrophobic properties
influence of structure and hydrophobic properties on the characteristics of carbon/air elecrodes, **8**, 17
Hydroquinone
cyclic voltammetric study of quinone–hydroquinone organic system in aqueous magnesium perchlorate electrolyte, **45**, 177
Hydrothermal curing
hydrothermal curing of lead/acid battery positive plates, **36**, 95
Hysteresis
effect of previous charge/discharge history on the capacity of the PbO_2PbSO_4 electrode: the hysteresis or memory effect, **25**, 27

Immobilized electrolytes
limitations in the design of lead/acid cells with immobilized electrolyte, **13**, 39
quality test of lead accumulators, especially of maintenance-free, sealed lead batteries with immobilized electrolyte, **17**, 160
Impedance
a.c. impedance studies of the anodic passivating layer in lithium/$SOCl_2$ batteries, **25**, 123
a.c. impedance studies on the lithium passivating layer of an Li/$SOCl_2$ cell (extended abstract), **26**, 419
a.c. impedance studies of the lithium/polymer electrolyte interface in solid-state lithium cells, **24**, 157
a.c. impedance study of lithium in sulfur dioxide electrolytes, **20**, 37
alternating-current impedance of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 51
the application of electrochemical impedance spectroscopy for characterizing the degradation of $Ni(OH)_2$/NiOOH electrodes, **29**, 477
degradation in nickel/cadmium cells studied by impedance measurements, **12**, 289
determination of impedance parameters of individual electrodes and internal resistance of batteries by a new non-destructive technique. 2. Theoretical approach, **50**, 33
discharge characteristics and interface impedance of an Li/1 M $LiClO_4$(PC)/V_2O_5, **16**, 97
double-layer impedance of a nickel oxide electrode at low states-of-charge, **47**, 27

effect of antimony on the semiconducting properties of the anodic plumbous oxide film formed in sulfuric acid solution.I. Studies with alternating-current (a.c.) impedance, **39**, 225
estimation of the pressure in hermetic Ni/Cd accumulator from its low-frequency impedance, **34**, 323
the faradaic impedance of the lithium/sulfur dioxide system. A further examination of commercial cells, **19**, 7
impedance analysis of lithium systems, **20**, 135
impedance characteristics of sealed lead/acid cells during galvanostatic charge, **37**, 403
impedance measurements of the lead/sodium sulfate system: synthesis of a.c. analogue circuit, **30**, 287
impedance measurements on porous zinc electrodes operating under starved electrolyte conditions, **45**, 55
impedance measurements on a spiral-wound nickel/metal hydride cell cycled in a simulated low earth orbit, **47**, 277
impedance of nickel/cadmium cells with nylon separator hydrolysate, **50**, 375
impedance peaks of sealed nickel/cadmium cells at low states-of-charges, **37**, 335
impedance of porous electrochemical systems: study of the negative active mass of the lead/acid battery, **30**, 269
impedances of nickel electrodes cycled in various KOH concentrations, **36**, 285
the impedance of sodium/sulfur cells at very low frequencies, **32**, 63
impedance studies of inter-cell welds in automotive lead/acid batteries, **30**, 301
impedance studies on the system Li-ClO_4/MEEP, **26**, 483
impedance study of the interfaces between lithium, polyaniline, lithium-doped MnO_2 and modified poly(ethylene oxide) electrolyte, **43**, 83
impedance study for the interface and whole battery with PAN-based polymer electrolyte, **44**, 431
internal impedance of nickel/cadmium batteries with applications to space, **38**, 295
investigations of the negative plate of lead/acid cells. 3. Model calculations of the impedance of self-similar porous electrodes, **50**, 89
lithium electrodes based upon aluminium and alloy substrates. I. Impedance measurements on aluminium, **28**, 259
non-destructive characterization of sealed lead/acid battery cells with electrochemical impedance spectroscopy, **32**, 261
non-stationary impedance analysis of lead/acid batteries, **30**, 275
quality assessment of unactivated cells by a.c. impedance techniques, **16**, 285
some aspects of the a.c. impedance behaviour of nickel hydroxide and nickel/cobalt hydroxide electrodes in alkaline solution, **27**, 15
studies on the Fe^{2+}/Fe^{3+} redox system using d.c. linear polarisation and impedance techniques, **19**, 269
voltage delay and complex impedance characteristics of a high-rate lithium/silver vanadium oxide multiplate battery (extended abstract), **26**, 365
Implantable battery(ies)
an approach to the reliability of implantable lithium batteries, **26**, 185
Implantable lithium cells
elective replacement indicator for implantable lithium cells, **14**, 83
Impurities
the effect of impurities on the performance of lithium intended for lithium/thionyl chloride battery manufacture, **24**, 95
Impurity effects
a rotating ring–disc electrode study of impurity effects on lead corrosionin sulfuric acid, **13**, 55
Incineration
the effect of water on incinerated lithium/sulfur dioxide batteries, **18**, 371
Indium
characterization of cadmium-doped copper indium sulfide films prepared by a two-step technique, **35**, 305
development of new alloys of commercial aluminium (2S) with zinc, indium, tin, and bismuth as anodes for

alkaline batteries, **27**, 235
on electrochemical photovoltaic cells formed with $CuInS_2$ films, **21**, 59
electron and phonon aspects in a lithium intercalated InSe cathode, **20**, 213
Individual pressure vessel
NASA Lewis advanced individual pressure vessel (IPV) nickel/hydrogen technology, **47**, 233
Industrial battery(ies)
maintenance-free industrial lead/acid batteries, **23**, 135
Industrial battery market
world starter and industrial battery market update: an insider view, **28**, 23
Inert oxides
interfacial conductionin lithium iodide containing inert oxides, **9**, 373
Infrared characterization
infrared characterization of turbostatic α- and well crystallized α^*-cobalted nickel hydroxides, **36**, 113
Inhibitors
influence of activators and inhibitors on the positive active material of lead/acid batteries, **30**, 107
influence of inhibitors on corrosion and anodic behaviour of different grades of aluminium in alkaline media, **50**, 321
Inorganic electrolytes
an electrochemical investigation of the temperature dependence of inorganic electrolytes in rechargeable lithium batteries, **26**, 511
lithium-cycling efficiency in inorganic electrolyte solution, **44**, 405
rechargeable $LiCoO_2$ in inorganic electrolyte solution, **44**, 583
volatile products of electrode reactions in inorganic electrolyte, **44**, 727
Insertion
chemical and electrochemical lithium insertion into ternary transition metal sulfides MMo_2S_4 (M: V, Cr, Fe), **39**, 299
insertion of lithium into RuO_2/TiO_2 electrodes, **44**, 547
insertion mechanism of the lead dioxide electrode, **30**, 143
lithium insertion into $Fe_2(SO_4)_3$, **26**, 403
lithium insertion into $Li_{1-x}V_2O_4$ $(0.7 \leqslant x \leqslant 0.9)$, **35**, 323
lithium insertion into oriented microcrystals and gels of anhydrous and hydrated vanadium pentoxide, **26**, 475
lithium insertion into TiS_2 from various electrolytes, **43**, 301
Insertion electrodes
the kinetics of porous insertion electrodes, **26**, 139
vanadium and titanium oxides prepared by hydrolysis of alkoxides as insertion electrodes in lithium cells with polymeric electrolytes, **32**, 81
Instrumentation
data acquisition and control instrumentation of the BEWAG battery test facility, **17**, 201
innovative on-board instrumentation of EV battery characterization, **17**, 215
Integrated circuit cards
ultra-thin manganese dioxide/lithium battery for multifunctional IC cards (extended abstract), **26**, 369
Intercalation
electrochemical method for studying the reversibility of the lithium intercalation in secondary batteries, **9**, 321
ion solvation in lithium battery electrolyte solutions. Part II. Solvent effects on lithium-ion intercalation in niobium triselenide, **36**, 17
transition metal displacement in cathodic host structures upon lithium intercalation, **43**, 277
Intercalation compounds
application of FeOCl derivatives as cathode materials for a secondary lithium battery. II. Comparison of the discharge and charge characteristics of γ-FeOOH prepared from the intercalation compound of FeOCl and 4-aminopyridine with those of FeOOH intercalated with aniline (a-FeOOH(AN)), **40**, 291
the influence of a CrO_3–graphite intercalation compound on the discharge characteristics of an MnO_2 cathode in alkaline electrolyte, **25**, 133
positive electrode for galvanic cells prepared by anodization of CrO_3–graphite intercalation compounds in aqueous sulfuric acid, **41**, 263

structure and electrochemical reversibility of alkaline metal intercalation compounds capable of being reduced in non-aqueous media, **9**, 167
theoretical study of a composite electrode using an intercalation compound: influence of the particle size distribution on the depth of discharge, **14**, 209
Intercalation materials
investigation of lithium intercalation materials with organic solvents and molten salts as electrolytes at temperatures between 60 and 175 °C, **20**, 221
Intercell currents
intercell currents in assembly of modules: quality control considerations, **32**, 353
Interfaces
a.c. impedance studies of the lithium/polymer electrolyte interface in solid-state lithium cells, **24**, 157
behavior of lithium/electrolyte interface in organic solutions, **43**, 1
the behaviour of polyvinyl alcohol at the planar $Cd/Cd(OH)_2$ electrode interface, **23**, 341
diffusional limitations at the lithium polymer electrolyte interface, **39**, 215
discharge characteristics and interface impedance of an Li/1 M $LiClO_4$(PC)/V_2O_5, **16**, 97
effect of cycling on the lithium/electrolyte interface in organic electrolytes, **43**, 21
electrode processes at the lithium/polymer elecrolyte interface, **18**, 75
expander action at the $Pb(Hg)/PbCl_2$ interface, **2**, 137
impedance study of the interfaces between lithium, polyaniline, lithium-doped MnO_2 and modified poly(ethylene oxide) electrolyte, **43**, 83
impedance study for the interface and whole battery with PAN-based polymer electrolyte, **44**, 431
incorporation mechanism for doping of metal ions into a passivating film at the lithium/thionyl chloride interface, **45**, 7
interfacial phenomena in polymer-electrolyte cells: lithium passivation and cyclability, **43**, 9
the Li/LiV_3O_8 polymer electrolyte lithium battery. III. Investigations of the electrode interfaces, **24**, 287
modification of lithium/electrolyte interface by plasma polymerization of 1,-difluoroethene, **44**, 377
phenomena at the interface between positive active material and lead/calcium/tin grids, **30**, 23
scanning laser microscopy studies of grid-paste interfacial areas, **40**, 147
Interfacial conduction
interfacial conductionin lithium iodide containing inert oxides, **9**, 373
Iodine
electrical conductivity of KCu_4I_5, **1**, 103
factors affecting the internal resistance of silver/silver molybdate/iodine cells, **45**, 255
improvement in discharge rate and low temperature characteristics of lithium/iodine cells, **14**, 173
lithium/iodine batteries based on metal dibenzo(b,i)(1,4,8,11)tetraaza(14)-annulene-iodine charge transfer complexes, **22**, 69
the lithium/iodine cell for medical and commercial applications, **5**, 15
long-term discharge characteristics of lithium/iodine cells with an additive in poly(2-vinylpyridine) iodide, **20**, 141
modeling the discharge behaviour of the lithium/iodine battery, **43**, 111
a modified lithium/iodine battery, **37**, 355
performance of polyacrylonitrole-based cathodes in lithium/iodine solid state batteries, **19**, 37
performance and reliability of the lithium/iodine battery, **5**, 1
problems of manufacturing a magnesium/iodine battery, **41**, 299
studies on the electrical properties of P2VP·nI_2 complexes, **26**, 557
Iodine redox couple
photocatalytic behaviour of *n*-$MoSe_2$ single crystals in contact with the I^-, I_2 redox couple in solar photoelectrochemical cells, **7**, 275
Ion-conducting polymers
electrical breakdown phenomena in $(PEO)_xLiF_3CSO_3$ ion-conducting poly-

mers, **40**, 271
Ionic conduction
mechanism of ionic conduction in polyether–polyurethane networks containing lithium perchlorate, **20**, 339
Ionic conductivity
mechanism of high ionic conductivity in elastomeric networks, **9**, 389
Ionic solids
thermoelectric power of AgI–Ag oxysalt ionic solids, **2**, 257
Ionic transport
ionic transport in passivating layers on the lithium electrode, **44**, 365
ionic transport studies of the Li_2SO_4/Li_2CO_3/LiCl system, **22**, 21
Ion solvation
ion solvation in lithium battery electrolyte solutions. Part II. Solvent effects on lithium-ion intercalationin niobium triselenide, **36**, 17
Iron
application of FeOCl derivatives as cathode materials for a secondary lithium battery. II. Comparison of the discharge and charge characteristics of γ-FeOOH prepared from the intercalation compound of FeOCl and 4-aminopyridine with those of FeOOH intercalated with aniline (a-FeOOH(AN)), **40**, 291
application of FeOOH derivatives for a secondary lithium battery, **44**, 627
assessment of performance characteristics of the nickel/iron cell, **27**, 311
chemical and electrochemical lithium insertion into ternary transition metal sulfides MMo_2S_4 (M: V, Cr, Fe), **39**, 299
developmental studies on porous iron electrodes for the nickel/iron cell, **32**, 341
the discharge and charge characteristics of FeOCl modified by an organic compound, **26**, 467
effect of iron addition to the cadmium electrode, **32**, 55
effects of an additive material, $CuFeS_2$, on Li/CuO battery performance, **20**, 119
effect of zinc and iron ions of the electrochemistry of nickel oxide electrode: slow cyclic voltammetry, **47**, 79
electrochemical aspects of the deintercalation of layered AMO_2 compounds, **14**, 231
influence of Fe(III) ions on the nickel hydroxide electrode during long-term cycling, **21**, 77
interaction of Fe^{2+}/Fe^{3+} and Ti^{3+}/Ti^{2+} with chromotropic acid: conductometric and spectrophotometric studies, **24**, 341
lithium insertion into $Fe_2(SO_4)_3$, **26**, 403
nature of the oxidizing centres in transition metal phosphorus trisulfides MPS_3 (Mfle, Ni)), **20**, 205
the nickel/iron battery, **35**, 21
passivation of iron in alkaline carbonate solutions, **35**, 131
precision cycling and Coulombic efficiency measurements in Li/MoS_2 and Li, Al/FeS cells, **26**, 293
progress in US Government sponsored battery development (1978–1979); nickel/iron batteries, **5**, 323
redox processes in the Li_xFeS_2/Li electrochemical system studied through crystal Mössbauer, and EXAFS analyses, **26**, 325
relationship between composition of the electrolyte slutions and energetic performance of 1.5 V non-aqueous cells of lithium/iron sulfide system, **44**, 355
structure and properties of precipitated nickel–iron hydroxides, **45**, 281
studies on the Fe^{2+}/Fe^{3+} redox system using d.c. linear polarisation and impedance techniques, **19**, 269
a study of the discharge performance of the Ti/Fe redox flow system, **13**, 65
synthesis of FeS for lithium batteries, **27**, 337
Iron/air battery(ies)
an iron/air vehicle battery, **2**, 287
Iron/air cells
rechargeable iron/air cells employing bifunctional oxygen electrodes of oxide pyrochlores, **35**, 113
Iron/chromium battery(ies)
optimization studies on a Fe/Cr redox flow battery, **39**, 147
Iron conduction
mechanism of ion conduction in alkali metal–polymer complexes, **9**, 383
Iron electrodes

behaviour of iron polythiophene positive electrodes in lithium cells, **36**, 557
comparative study of porous iron electrodes, **45**, 267
developmental studies on porous iron electrodes for the nickel/iron cell, **32**, 341
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, **41**, 99
formation mechanism of porous alkaline iron electrodes, **32**, 329
new zinc and iron electrodes of the second kind of sulfuric acid, hydrofluoric acid and (cyclo)alkylammonium hydrogen sulfate, **32**, 287
open-circuit potential-recovery transients of alkaline porous iron electrodes, **21**, 53
rechargeable alkaline iron electrodes, **34**, 269
role of activation on the performance of the iron negative electrode in nickel/iron cells, **39**, 113
voltammetric study of an iron electrode in alkaline electrolyte, **25**, 111

Iron/ligand systems
Fe(III)/Fe(II) ligand systems for use as negative half-cells in redox-flow cells, **27**, 119

Iron oxide electrodes
electrochemical behaviour of iron oxide electrodes in alkali solutions, **32**, 277
study of iron oxide electrodes in an alkaline electrolyte, **19**, 315

Iron phthalocyanine
study of polymeric iron phthalocyanine as electrocatalyst for reduction of oxygen in acidic electrolytes, **2**, 351

Iron polyphthalocyanines
elecrochemical activity of some different iron polyphthalocyanines for the oxygen reduction reaction in acidic medium, **6**, 35

Iron sulfide
introduction to the scaling properties in elctrochemistry: from the "TEISI" model to the lithium fractal ordering in Li_xFeS_2 layered structure, **9**, 359
magnesia porous particle separators for lithium–aluminum/iron sulfide batteries, **13**, 235
pelletized lithium/metal sulfide cells. Part II. Some operating characteristics of pelletized LiAl–FeS cells, **8**, 341
preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery, **5**, 89

Isasmelt process
lead/acid battery recycling and the new Isasmelt process, **42**, 299

Isopropoxide ion
isopropoxide ion – a novel depolarized for aluminium batteries, **37**, 411

Kinetic barriers
kinetic barriers to the preferred electrode process in subzero battery electrolytes, **8**, 83

Kinetics
electrochemical investigations on the kinetics of the growth of PbO_2 layers on lead, **13**, 101
electrode kinetics of a nickel/cadmium cell and failure-mode prediction. Estimation of equivalent resistance of an internal short, **19**, 67
electrode kinetics in poly(ethylene oxide)-based electrolytes, **20**, 333
high energy efficiency and high power density proton exchange membrane fuel cells – electrode kinetics and mass transport, **36**, 299
II. Kinetics of the catalytic decomposition of hydrogen peroxide solution by manganese dioxide samples, **22**, 149
I. Kinetics of reduction of manganese dioxide by ascorbic acid and hydrazine solutions, **22**, 133
the kinetics of charge-transfer reactions on passive lithium electrodes, **26**, 121, 129
kinetics of hydrogen evolution reaction on lead/acid battery negative plates with silicate and antimony added to the electrolyte, **30**, 169
kinetics of hydrogen-evolution reaction on lead and lead-alloy electrodes in sulfuric acid electrolyte with phosphoric acid and antimony additives, **48**, 371
the kinetics of porous insertion electrodes, **26**, 139

the kinetics of the reduction of thionyl chloride, **26**, 161
kinetics of semiconducting polymer electrodes in lithium cells, **19**, 27
kinetic studies of the electrochemical reaction between lithium and phthalocyanine, **14**, 71
kinetic studies of the electrochemical reaction between lithium and phthalocyanine. II. Reduction reaction mechanism, **16**, 45
macrokinetic study of thionyl chloride reduction on porous carbon electrodes, **26**, 427
a novel approach for estimating the electrode kinetic parameters of gas-diffusion electrodes using the inflection point in steady-state current/potential data, **39**, 249
the secondary lithium/aluminium electrode at room temperature. II. kinetics of the electrochemical formation of the lithium–aluminium alloy, **12**, 155
a study of the reaction kinetics of $SOCl_2$ in electrolytes containing $AlCl_3$ or $LiAlCl_4$, **21**, 119

Landfill gas
landfill gas pretreatment for fuel cell applications, **49**, 143
Lanthanum
electrolytes for the high temperature fuel cell; experimental and theoretical studies of the perovskite $LaAlO_3$, **3**, 67
reduction of oxygen on $LaNiO_3$ in alkaline solution, **10**, 319
Lead
age hardening of a Pb–0.1wt.%Ca–0.3wt.%Sn alloy and the effects of heat during battery manufacturing on this process, **42**, 35
the anodic behaviour of tin and a lead–tin alloy in sulfuric acid, **40**, 217
anodic oxidation of lead in sulfuric acid solutions. The effect of different perchlorate salts on Planté formation, **32**, 243
castability of low-antimony/lead battery alloys, **40**, 225
comments on sample treatments in the X-ray diffraction analysis of the oxidation products of lead, **32**, 71
continuous production of automotive lead/acid battery plates from lead–calcium–tin strip, **31**, 157
corrosion behaviour of low-antimony lead alloy in sulfuric acid solution, **50**, 47

phenomena at the interface between positive active material and lead/calcium/tin grids, **30**, 23
processes at the micro-level in the oxidation of $PbSO_4$ to PbO_2 during charging of lead/acid battery positive plates, **30**, 77
pure lead and the tin effect in deep-cylcing lead/acid battery applications, **33**, 165
reclaim and wast treatment of lead from lead/acid battery plants, **23**, 249
a rotating ring–disc electrode study of impurity effects on lead corrosionin sulfuric acid, **13**, 55
a study of the corrosion of negative-plate lead-antimony lugs in lead/acid batteries, **45**, 131
thirteen years' experience with expanded lead/calcium/tin grids for automotive battery plates, **33**, 67
unusual effects of ammonium ligno-sulfonate on the electrochemical behaviour of lead, lead–calcium, and lead–antimony alloys, **40**, 323
use of secondary lead for new generations of lead/acid batteries, **42**, 11

Lead accumulators
mechanism of oxidation of free lead in lead accumulator paste by curing, **17**, 331
quality test of lead accumulators, especially of maintenance-free, sealed lead batteries with immobilized electrolyte, **17**, 160
in situ conductance measurements of lead accumulator negative plates, **10**, 271

Lead/acid accumulators
a correlation between porous structure of the separator and barodynamic characteristics of sealed lead/acid accumulators, **39**, 179
current distribution in lead/acid and nickel/cadmium accumulators, **27**, 45
thermopassivation of the positive lead/acid battery electrode. Part II. Influence of activating conditions on the thermopassivation of dry-charged positive electrodes of the lead/acid accumulator, **10**, 43

Lead/acid active material
the gassing behaviour of lead/acid negative active material and development of a quality control test for lead oxide purity, **24**, 127

Lead/acid appliance battery
the lead/acid appliance battery — a popular power source remote from the grid, **19**, 223

Lead/acid battery cells
non-destructive characterization of sealed lead/acid battery cells with electrochemical impedance spectroscopy, **32**, 261

Lead/acid battery chargers
a system evaluation of lead/acid battery chargers. Part I. Cells with antimonial positive grids, **2**, 301
a system evaluation of lead/acid battery chargers. Part II. Cells with cast lead/calcium grids, **2**, 317

Lead/acid battery electrodes
conductivity model for lead/acid battery electrodes discharged at low rates, **38**, 281
the effect of additives on the positive lead/acid battery electrode, **14**, 305
measurement of the contact resistance between the active mass and the current collector in lead/acid battery electrodes, **30**, 315
performance characteristics of lead oxides in pasted lead/acid battery electrodes, **46**, 285
study of structural factors of lead/acid battery electrodes, **4**, 43
on thermopassivation of the positive lead/acid battery electrode. Part 3: Thermopassivation of smooth PbO_2 electrodes, **14**, 277
thermopassivation of the positive lead/acid battery electrode. Part II. Influ-

ence of activating conditions on the thermopassivation of dry-charged positive electrodes of the lead/acid accumulator, **10**, 43
on thermopassivation of positive lead/acid battery electrodes. Part I. The influence of drying positive dry-charged lead/acid battery electrodes on thermopassivation and its causes, **7**, 201
time effects in conductivity measurements of lead/acid battery electrodes, **30**, 309
Lead/acid battery factories
totally automatic element manufacturing process for lead/acid battery factories, **31**, 359
Lead/acid battery grids
a photocurrent imaging study of the distribution of lead monoxide in corrosion layers on lead/acid battery grids, **42**, 119
the use of scanning photocurrent imaging to study the distribution of lead monoxide in corrosion layers on lead/acid battery grids, **38**, 373
Lead/acid battery(ies)
accelerated curing of negative plates for lead/acid batteries, **31**, 217
accelerated cycle-life testing of small sealed lead/acid batteries, **38**, 143
accelerated life cycle testing and analysis for early failure prediction using two types of lead/acid batteries, **37**, 363
activity and corrosion of tungsten carbide recombination electrodes during lead/acid battery operation, **40**, 333
advanced lead/acid batteries for stand-alone power-supply systems, **31**, 329
the advanced lead/acid battery consortium, **40**, 1
advanced in manufacturing systems for tubular positive plates for stationary and traction lead/acid batteries, **31**, 255
analysis of the conditions that promote passivation on calcium–alloy grids in lead/acid batteries, **36**, 451
antimony poisoning in lead–acid batteries, **19**, 301
the application of photoacoustic spectrophotometry (PAS) to the study of positive plates in lead/acid batteries, **19**, 1
aspects of lead/acid battery technology. 9. Grids, **50**, 193
automation and rationalization of the plate-stacking process for automotive, traction and stationary lead/acid batteries, **31**, 355
automotive lead/acid battery service-life: measurement and surveys, **23**, 175
battery lifetime prediction by pattern recognition. Application to lead/acid battery life-cycling test data, **13**, 23
BCI cycle life testing procedures for deep-cycle lead/acid batteries, **17**, 152
behaviour of lead–calcium alloys in positive plates of flooded and recombinant lead/acid batteries, **33**, 59

Lead/acid battery systems
discussions on the lead/acid batttery system, **23**, 257
Lead/acid battery technology
aspects of lead/acid battery technology. 1. Pastes and paste mixing, **41**, 107
aspects of lead/acid battery technology. 2. Tubular postive plates, **41**, 163

aspects of lead/acid battery technology. 3. Plate curing, **41**, 185
aspects of lead/acid battery technology. 4. Plate formation, **41**, 195
aspects of lead/acid battery technology. 5. Dry charging of formed negative plates, **45**, 353,, **45**, 353
aspects of lead/acid battery technology. 6. Designing for capacity, **46**, 73
aspects of lead/acid battery technology. 7. Separators, **46**, 117
aspects of lead/acid battery technology. 8. Battery oxide, **47**, 197
Lead/acid battery temperature
effects of fast charging on hybrid lead/acid battery temperature, **48**, 163
Lead/acid cells
accelerated life cycle test. Advanced lead/acid cells at elevated temperature, **17**, 183
an aggregate model of the positive electrode system of the lead/acid cell. II. Simulation results, **41**, 39
an aggregate model for the positive electrode system of the lead/acid cell. I. Model development, **41**, 25
antimony in lead/acid cells, **19**, 75
antimony in lead/acid cells. II. Generation and uptake of soluble antimony, **16**, 171
a comparison of flooded, gelled and absorptive-separator lead/acid cells, **23**, 127
a cylindrical, pure lead, lead/acid cell for float service, **4**, 309
design optimization of tall tubular lead/acid cells based on an analysis of the reaction distribution, **16**, 65
effect of curing on positive plate behaviour in lead/acid cells, **32**, 407
effects of electrolyte flow on the performance of lead/acid cells, **22**, 115
effects of phosphoric acid additions on the behaviour of the lead/acid cell, **24**, 171
the electromotive force of the lead/acid cell and its half-cell potentials, **35**, 197
evolution of gas-recombination lead/acid cells and batteries, **31**, 3
fundamentals of lead/acid cells. XVII. Negative organic expander action at low temperatures, **8**, 197
impedance characteristics of sealed lead/acid cells during galvanostatic charge, **37**, 403
the influence of acid diffusion on the performance of lead/acid cells, **10**, 355
influence of electrolyte temperature and positive-plate thickness on the performance of lead/acid cells, **31**, 271
the influence of mass transport processes on the performance of the lead/acid cell, **9**, 19
the influence of mass transport processes on the performance of the lead/acid cell on pulsed discharge, **10**, 53
investigations of the negative plate of lead/acid cells. 1. Section of additives, **47**, 129
investigations of the negative plate of lead/acid cells. 2. Veritifaction with 2 V cells, **47**, 149
investigations of the negative plate of lead/acid cells. 3. Model calculations of the impedance of self-similar porous electrodes, **50**, 89
limitations in the design of lead/acid cells with immobilized electrolyte, **13**, 39
modeling the occurrences of cell reversals in long strings of lead/acid cells, **41**, 277
a new equation for the limiting capacity of the lead/acid cell, **35**, 97
oscillations of electrode potentisls in sealed lead/acid cells, **45**, 325
passivation reactions on the electrodes of a lead/acid cell, **2**, 369
preliminary results from an improved theoretical approach ttowards characterizing sealed lead/acid cells, **31**, 115
real-time charge efficiency monitoring and on-charge gas evolution in tall lead-acid traction cells, **27**, 155
recent advances in lead/acid cell research and development, **7**, 343
the residual capacity estimation of fully sealed 25 A h lead/acid cells, **17**, 305
reversible capacity decay of positive electrodes in lead/acid cells, **33**, 231
a review of oxygen recombination in the sealed lead–acid cell, **19**, 261
the role of additive in the positive active mass of the lead/acid

cell, **27**, 127
study of sealed/acid cells, **32**, 303
thin layer actiation studies of material migration during the operation of lead/acid cells, **37**, 415
three-elemental models for the positive electrode of the lead/acid cell. II. Simulation results, **41**, 13
three-elemental models for the positive electrode of the lead/acid cell. I. Model development, **41**, 1
Lead/acid electrodes
mathematical models for anodic polarization of the lead/acid positive electrode, **30**, 237
Lead/acid golf car battery(ies)
accelerated cycle life testing of lead/acid golf car batteries and the influence of separator type on battery life, energy consumption and operating cost, **10**, 137
Lead/acid pastes
evaluation of hollow, glass microspheres used as an additives in positive, lead/acid battery paste, **34**, 217
Lead/acid plates
effect of organic additives on the lead/acid negative plate, **30**, 185
relative-humidity/temperature relationships for saturated salt solutions: application to lead/acid plate curing, **22**, 169
Lead/acid positive electrodes
the Planté formation process for lead/acid positive electrodes, **7**, 181
Lead/acid positive plates
hydrogen and order–disorder in PbO_2 in lead/acid positive plates, **25**, 313
the role of tetrabasic lead sulphate in the lead/acid positive plate, **25**, 305
Lead/acid stationary battery(ies)
lead/acid stationary batteries for power sector in India, **28**, 201
Lead/acid storage battery(ies)
battery monitoring and integrity testing of large lead/acid storage batteries, **17**, 203
Lead/acid systems
conference report: UNESCO expert workshop: theory and practice of the lead/acid system, Gaussig, F.R.G., April 2–5, 1991, **36**, 405
efficiency of lignosulfonates and humic-related substances as expanders in negative electrodes of the lead/acid system, **50**, 131
influence of phosphoric acid on both the electrochemistry and the operating behaviour of the lead/acid system, **33**, 213
photocurrent spectroscopy and its applciation to the study of the lead/acid system, **40**, 137
sulfate passivation in the lead/acid system as a capacity limiting process, **8**, 159
Lead/acid traction battery(ies)
crystalline phase composition of positive plates in lead/acid traction batteries under simulated electric vehicle service, **8**, 175
effect of electrolyte agitation on the performance of lead/acid traction battteries at various temepratures, **13**, 137
lead/acid – still top of the galvanic traction pile in 1983, **11**, 119
lead/acid traction batteries for electric road vehicle propulsion – directions for research and development, **5**, 221
Lead/acid tubular positives
factors affecting the formation of lead/acid tubular positives, **8**, 385
factors affecting the formation of lead/acid tubular positives. II. Resting and extreme conditions, **10**, 389
Lead alloys
present trends in lead alloys for the manufacture of battery grids – a review, **1**, 301
Lead anodes
design of additives to enhance the performance of the lead anode in sulfuric acid, **30**, 193
Lead–antimony alloys
the effect of ageing on the anodic corrosion of Pb–Sb alloys, **3**, 145
Lead/antimony battery grids
ageing behaviour of cast Pb/Sb battery grids, **4**, 53
Lead–bismuth alloys
the hydrogen evolution reaction on lead-bismuth alloys, **22**, 11
Lead–calcium alloys
behaviour of lead–calcium alloys in positive plates of flooded and recombinant lead/acid batteries, **33**, 59

electrochemical investigation of lead-calcium alloys in sulfuric acid, **21**, 151
lead–calcium alloys in the production of lead/acid batteries, **33**, 51
the problem of maintaining Ca concentration in Pb–Ca alloys for grid casting, **3**, 367
Lead/calcium battery(ies)
application of wrought lead/calcium batteries in Europe, **33**, 87
formation of wrought lead/calcium batteries for consistency, **33**, 77
improved grid alloys for deep-cycling lead/calcium batteries, **33**, 13
techniques to reduce failure in lead/calcium batteries using expanded type grids, **42**, 221
Lead/calcium grids
casting technology for lead–calcium grids, **19**, 143
a system evaluation of lead/acid battery chargers. Part II. Cells with cast lead/calcium grids, **2**, 317
Lead cathodes
performance characteristics of a pilot sea-water activated battery with Pb/$PbCl_2$ cathodes, prepared by cyclic voltammetry, **41**, 55
Lead dioxide
conversion of tetrabasic lead sulfate to lead dioxide in lead/acid battery plates, **38**, 87
crystal growth of PbO_2 and its relation to the capacity loss of positive plates in seald lead/acid batteries, **30**, 13
effect of electrolyte impurity on the electrochemical performance of the lead/tetrafluoroboric acid/lead dioxide cell, **3**, 267
effects of antimony on the electrochemical behaviour of lead dioxide in sulphuric acid, **9**, 221
electrochemical investigations on the kinetics of the growth of PbO_2 layers on lead, **13**, 101
electrodeposited α-PbO_2 and β-PbO_2 in sulfuric acid: recharge, cycling and morphology, **13**, 223
the electronic conductivity of compact lead dioxide samples with various stoichiometric compositions, **6**, 245
hydrogen and order–disorder in PbO_2 in lead/acid positive plates, **25**, 313
influence of antimony on the electrochemical behaviour and the structure of the lead dioxide active mass of lead/acid batteries, **42**, 71
influence of crystal and gel zones on the capacity of the lead dioxide active mass (extended abstract), **40**, 169
influence of the lead dioxide active mass on the corrosion rate of the spines of positive lead/acid battery plates, **6**, 15
lead dioxides as cathodic materials for lithium polymer cells, **45**, 209
mechanism of PbO_2 formation in lead/acid battery positive plates, **41**, 231
oxygen evolution on lead dioxide in sulphuric acid solutions, **31**, 121
PbO_2 active material as an electro-crystalline network, **46**, 219
scanning tunneling microscopy of lead dioxide, **40**, 149
structure and properties of electrochemically active thin PbO_2 films for reserve batteries, **31**, 339
a study of the oxidation of $4PbO \cdot PbSO_4$ crystals in cured paste to PbO_2 agglomerates during formation of positive plates for lead/acid batteries, **31**, 243
Lead dioxide electrodes
currentless passivation of the PbO_2 electrode with respect to the influence of tin, **30**, 41
discharge behaviour of electrodeposited PbO_2 and Pb electrodes, **7**, 73
the effect of nicotinamide on the charge/discharge behavior of PbO_2 electrode in sulfuric acid solution, **39**, 43
electrochemical investigations of the stationary and non-stationary behaviour of the PbO_2 electrode, **16**, 293
evaluation of cyclic voltammetry for accelerated corrosion life tests of the PbO_2 electrode, **2**, 241
influence of H_3PO_4 on the electrochemical behaviour of the PbO_2 electrode, **38**, 261
influence of recharge potential and acid concentration on the discharge behaviour of PbO_2 electrodes, **46**, 231
the influence of the solid/porous electrode interphase on the behaviour of

porous lead dioxide electrodes, **6**, 63
influence of tin on passivation of PbO_2 electrodes, **28**, 367
insertion mechanism of the lead dioxide electrode, **30**, 143
reversible capacity decay of PbO_2 electrodes influence of high rate discharges and rest times, **40**, 157
studies on the physicochemical properties and performance characteristics of the PbO_2 electrode, **36**, 439
on thermopassivation of the positive lead/acid battery electrode. Part 3: Thermopassivation of smooth PbO_2 electrodes, **14**, 277
Lead dioxide/lead cells
operation of oxygen cycle during charge and discharge of sealed PbO_2/Pb cells using the separator as electrolyte carrier, **27**, 201
Lead dioxide powder
the magnetoresistance of lead dioxide powder, **4**, 171
Lead electrodes
the aggregate-of-spheres ('Kugelhaufen') model of the $PbO_2/PbSO_4$ electrode, **30**, 209
behaviour of the $PbO_2/PbSO_4$ electrode with regard to charging regime and small additions of phosphoric acid to the sulfuric acid electrolyte, **30**, 99
behaviour of the $PbO_2/PbSO_4$ electrode in sulfur acid containing tin ions, **30**, 33
in situ Fourier-transform infrared investigations of lead electrodes in sulfuric acid: formation of lead sulfate on lead and lead alloys, **42**, 137
cyclic voltammetry on lead electrodes in sulfur acid solution, **1**, 257
discharge behaviour of electrodeposited PbO_2 and Pb electrodes, **7**, 73
effect of previous charge/discharge history on the capacity of the PbO_2PbSO_4 electrode: the hysteresis or memory effect, **25**, 27
the electrochemistry of the porous lead electrode in sulfuric acid — a selective review, **6**, 101
influence of phosphoric acid on the electrochemistry of lead electrodes in sulfuric acid electrolyte containing antimony, **46**, 1
inhibition of hydrogen evolution by antimony contaminated lead electrodes in sulfuric acid electrolyte, **28**, 381
kinetics of hydrogen-evolution reaction on lead and lead-alloy electrodes in sulfuric acid electrolyte with phosphoric acid and antimony additives, **48**, 371
a new lead/lead sulfate reference electrode for lead/acid battery research, **27**, 167
the oxidation of porous lead electrodes in sulfuric acid solutions, **4**, 21
surface preparation of planar lead electrodes for electrochemical studies in sulphuric acid solutions, **34**, 289
Lead/graphite accumulators
a lead/graphite accumulator using aqueus hydrofluoric acid, **12**, 9
Lead market
the lead market, **28**, 3
Lead materials
minor elements in lead materials used for lead/acid batteries. 1. Hydrogen- and oxygen-gassing characteristics, **48**, 219
Lead/mercury battery(ies)
preliminary studies on a rechargeable acidic lead/mercury battery, **32**, 187
Lead/mercury cells
charge–discharge behaviour of lead/mercury cell in aqueous sulphuric acid, **35**, 183
Lead monoxide
a photocurrent imaging study of the distribution of lead monoxide in corrosion layers on lead/acid battery grids, **42**, 119
the use of scanning photocurrent imaging to study the distribution of lead monoxide in corrosion layers on lead/acid battery grids, **38**, 373
Lead oxides
effect of antimony on the semiconducting properties of the anodic plumbous oxide film formed in sulfuric acid solution. II. Studies of photoelectrochemical current, **39**, 233
effect of antimony on the semiconducting properties of the anodic plumbous oxide film formed in sulfuric acid solution. I. Studies with alternating-current (a.c.) impedance, **39**, 225

electrochemical behaviour of lead oxides in aprotic organic electrolyte solution, **21**, 105
the gassing behaviour of lead/acid negative active material and development of a quality control test for lead oxide purity, **24**, 127
lead oxides as cathode materials for voltage-compatible lithium cells, **18**, 63
performance characteristics of lead oxides in pasted lead/acid battery electrodes, **46**, 285
quantitative X-ray diffraction analysis of α-PbO/β-PbO in lead–acid battery primary oxide, **13**, 171
Lead pastes
lead/acid battery positive plates manufactured from $4PbO \cdot PbSO_4$ pastes prepared from leady oxide and red lead, **31**, 189
Lead production
secondary lead production in Malaysia, **23**, 67
Lead recycling
lead recycling technology, **28**, 85
Lead/sodium sulfate systems
impedance measurements of the lead/sodium sulfate system: synthesis of a.c. analogue circuit, **30**, 287
Lead–strontium alloys
lead–strontium alloys for battery grids, **2**, 337
a study of the electrochemical properties of lead-strontium alloys for lead/acid batteries, **33**, 21
Lead sulfate
in situ Fourier-transform infrared investigations of lead electrodes in sulfuric acid: formation of lead sulfate on lead and lead alloys, **42**, 137
conversion of tetrabasic lead sulfate to lead dioxide in lead/acid battery plates, **38**, 87
experimental study of the alkalization model for the $PbSO_4$ anodic layer on lead/acid positive-plate grids, **46**, 263
the influence of stand time on tribasic and tetrabasic lead sulfate containing lead/acid battery active masses, **38**, 273
a new lead/lead sulfate reference electrode for lead/acid battery research, **27**, 167
oxidation mechanisms of lead sulfure in sulfuric acid – overview, **30**, 55
processes during preparation of lead/acid battery positive plates from tetrabasic lead sulfate (4BS) pastes, **46**, 269
pulsed-current formation of tetrabasic lead sulfate in cured lead/acid battery plates, **42**, 55
the role of tetrabasic lead sulphate in the lead/acid positive plate, **25**, 305
X-ray diffraction studies of basic lead sulfates, **31**, 225
Lead sulfate pastes
the influence of the raw material and production method on the morphology, microstructure, chemical and phase composition of tetrabasic lead sulfate pastes, **39**, 59
Lead/sulfuric acid systems
film formation in the Pb(II) region of the Pb/H_2SO_4 system, **30**, 161
mathematical modelling of current-potential curves for the Pb/H_2SO_4 system, **30**, 243
study of electrode processes in Pb/H_2SO_4 + additive systems, **30**, 177
Lead supply
lead supply and demand, **19**, 113
Lead–tin alloys
an *in situ* of the effect of tin on the passivation of lead–tin alloys, **50**, 141
hydrogen evolution on lead–tin alloys, **17**, 361
Lead workers
the health of lead workers in New Zealand – an overview of management, **19**, 151
occupation health programme for lead workers in battery plants, **38**, 185
Leady oxides
background aspects of leady oxide production, **28**, 107
a comparison of Barton-pot and ball-mill processes for making leady oxide, **19**, 157
discussion on the properties and manufacture of leady oxide, **28**, 141
improvements to Barton-pot equipment for manufacturing leady oxide, **31**, 351
lead/acid battery positive plates manufactured from $4PbO \cdot PbSO_4$ pastes prepared from leady oxide and red

lead, **31**, 189
modern technology for leady oxide production, **28**, 121
a study of the phase composition, crystallinity, morphology, porosity and surface area of leady oxides used in lead/acid battery plates, **16**, 141
Leclanché cells
a new technique for determining battery internal resistance: studies on Leclanché cells, **7**, 267
Leclanché related electrolytes
a comparative study of the effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, **13**, 297
Life cycle testing
accelerated life cycle test. Advanced lead/acid cells at elevated temperature, **17**, 183
accelerated life cycle testing and analysis for early failure prediction using two types of lead/acid batteries, **37**, 363
accelerated life testing of sodium/sulfur cells, **17**, 195
rapid testing of beta alumina ceramics, **17**, 188
Life cycling
battery lifetime prediction by pattern recognition. Application to lead/acid battery life-cycling test data, **13**, 23
Life properties
determination of the life properties of beta-alumina tubes, **3**, 23
Life-testing
life-testing of 1.7 kW h zinc/chloride battery system: cycles 1-1000, **7**, 121
Life tests
improvement of bench life-tests for automotive batteries, **42**, 231
Lignosulfonates
the effect of a lignosulfate type additive on the lead/acid battery positive plate reactions, **27**, 245
efficiency of lignosulfonates and humic-related substances as expanders in negative electrodes of the lead/acid system, **50**, 131
Limiting factors
limiting factors for carbon-based chemical double-layer capacitors, **47**, 303
Liquid cathodes
liquid cathode primary batteries, **14**, 111
Liquid crystal display
thermal behavior of electrochemical cells by liquid crystal display, **14**, 321
Liquid electrolytes
non-equilibrium thermodynamics of transport and reaction in lithium cells with liquid or polymeric electrolytes: application to impedance analysis, **26**, 491
Lithium
the 3R phase of Li_xTiS_2, **26**, 301
a.c. impedance studies of the lithium/polymer electrolyte interface in solid-state lithium cells, **24**, 157
a.c. impedance study of lithium in sulfur dioxide electrolytes, **20**, 37
additive effects of Li^+ ion solvation compounds on $LiClO_4$–propylene carbonate electrolytic properties, **12**, 53
$(Ag_2O)_x(Li_2O)_{1-x}2B_2O_3$ mixed cation glasses, **9**, 379
the anodic passivation of lithium, **10**, 105
anodic passivation of lithium in electrolytes for Li/SO_2 cells at low temperatures, **13**, 327
the Au cathode in the system Li_2CO_3–CO_2–CO at 800 to 900 °C, **36**, 205
behavior of lithium/electrolyte interface in organic solutions, **43**, 1
button cells based on the Li/Bi_2O_3 couple, **16**, 263
cationic transport numbers in polyether-based networks containing lithium salts, **14**, 27
conductivity of $LiAlCl_4$ solutions in nitromethane containing SO_2, **12**, 31
crystal chemistry of electrochemically inserted $Li_xV_2O_5$, **34**, 103
cycling of β-LiAl in organic electrolytes — effect of electrode contaminations and electrolyte additives, **14**, 193
the cycling properties of the $Li_xN_{1-y}Co_yO_2$ electrode, **44**, 595
determination of the dissociation constant of molten $Li_2CO_3/Na_2CO_3/K_2CO_3$ using a stabilized zirconia oxide-ion indicator, **16**, 75
diffusional limitations at the lithium polymer electrolyte interface, **39**, 215

discharge characteristics and interface impedance of an Li/1 M $LiClO_4$(PC)/V_2O_5, **16**, 97
discharge performance of composition insertion electrodes analysis of discharges of 50 vol.% Li_3N/TiS_2 electrodes, **44**, 733
dissolution behaviour of copper and nickel oxides in molten Li_2CO_3/Na_2CO_3/K_2CO_3, **23**, 357
effect of cycling on the lithium/electrolyte interface in organic electrolytes, **43**, 21
effect of sodium cation on lithium corrosion in aprotic media (extended abstract), **26**, 455
effect of sodium on lithium corrosion in aprotic media, **28**, 335
effect of solvent blending on cycling characteristics of lithium, **20**, 299
effects of physical constraints on Li cyclability, **36**, 517
electrical breakdown phenomena in $(PEO)_xLiF_3CSO_3$ ion-conducting polymers, **40**, 271
electrical conductivity of a new solid electrolyte glass material $Li_2O–LiNbO_3–B_2O_3$, **13**, 151
electrical conductivity of a system of Ag_2SO_4:AgI eutectic added to $30Li_2SO_4:70Ag_2SO_4$, **27**, 323
electrochemical aspects of the deintercalation of layered AMO_2 compounds, **14**, 231
electrochemical insertion of lithium in manganese dioxide, **14**, 141
electrochemical method for studying the reversibility of the lithium intercalation in secondary batteries, **9**, 321
electrochemical processes in a high power Li–SO_2 source, **10**, 377
electrochemical studies of P3-MT electrodes in $LiAlCl_4–SO_2$ electrolyte (extended abstract), **26**, 553
electrochemical study of the passivating layer on lithium intercaleted carbon elctrodes in nonaqueous solvents, **43**, 65
an electrochemical study of PEO:$LiBF_4$-glass composite electrolytes, **47**, 63
electrode processes at the lithium/polymer elecrolyte interface, **18**, 75
electron and phonon aspects in a lithium intercalated InSe cathode, **20**, 213
evaluation and optimization of pelletized Li$Al/NaAlCl_4/MoCl_5$ electrochemical cells, **3**, 81
further electrochemical studies on Li/LiV_2O_4 secondary cells, **34**, 199
a high performance Li_xMnO_y cathode material for rechargeable lithium cells, **44**, 681
impedance studies on the system Li-ClO_4/MEEP, **26**, 483
impedance study of the interfaces between lithium, polyaniline, lithium-doped MnO_2 and modified poly(ethylene oxide) electrolyte, **43**, 83
improvement of lithium-containing manganese dioxide (composite dimensional manganese oxide: CDMO) as positive material for lithium secondary batteries, **39**, 51
improvement of solid electrolyte conductivity and cathodic properties of the $Li|LiI·H_2O(SiO_2)|PbI_2$ electrochemical cell, **38**, 345
incorporation mechanism for doping of metal ions into a passivating film at the lithium/thionyl chloride interface, **45**, 7
the increase of stability of Li_xCoO_2 electrodes of cointercalated sodium, **39**, 313
influence of water addition on structural and electrochemical behaviour of liquid ammoniates: a study of Li-$ClO_4·4NH_3$ ammoniate/H_2 mixtures, **20**, 305
insertion of lithium into RuO_2/TiO_2 electrodes, **44**, 547
insertion of lithium into vanadium molybdenum oxides, **20**, 187
interfacial phenomena in polymer-electrolyte cells: lithium passivation and cyclability, **43**, 9
introduction to the scaling properties in elctrochemistry: from the "TEISI" model to the lithium fractal ordering in Li_xFeS_2 layered structure, **9**, 359
investigation of lithium intercalation materials with organic solvents and molten salts as electrolytes at temperatures between 60 and 175 °C, **20**, 221

investigations on rechargeable lithium alloys on the basis of Al–Ni and A–Mn alloys, **44**, 421
ionic transport studies of the Li_2SO_4/Li_2CO_3/LiCl system, **22**, 21
kinetic studies of the electrochemical reaction between lithium and phthalocyanine, **14**, 71
kinetic studies of the electrochemical reaction between lithium and phthalocyanine. II. Reduction reaction mechanism, **16**, 45
the LiAl/$NaAlCl_4$/$MoCl_5$ thermal battery, **3**, 95
$LiAsF_6$ is propylene carbonate–acetonitrile for primary lithium batteries, **10**, 13
the Li_xTiS_2|$Li_{(1-x)}CoO_2$ solid-state rocking chair battery, **44**, 481
the Li/$Cu_4O(PO_4)_2$ couple: a new version for long-life low-rate applications, **20**, 111
Li/Li_xNiO_2 and Li/Li_xCoO_2 rechargeable systems: comparative study and performance of practical cells, **43**, 209
lithium-containing manganese dioxide (composite dimensional manganese oxide: CDMO) as positive material for a lithium secondary battery, **32**, 373
lithium-cycling efficiency in inorganic electrolyte solution, **44**, 405
lithium insertion into $Fe_2(SO_4)_3$, **26**, 403
lithium insertion into $Li_{1-x}V_2O_4$ ($0.7 \leqslant x \leqslant 0.9$), **35**, 323
lithium insertion into oriented microcrystals and gels of anhydrous and hydrated vanadium pentoxide, **26**, 475
lithium metal for the battery industry, **5**, 127
lithium rechargeability on different substrates, **47**, 57
a lithium solid-state cell based on the $Li_{3.75}S_{0.75}P_{0.25}O_4$ electrolyte, **2**, 387
mechanism of explosions of Li/$SOCl_2$ power sources, **39**, 375
mechanistic studies of oxide electrodes reversibly incorporating Li^+ ions, **9**, 307
modification of lithium/electrolyte interface by plasma polymerization of 1,-difluoroethene, **44**, 377
the MOLICEL® rechargeable lithium system: multicell aspects, **21**, 195
multinary alloy electrodes for solid state batteries. II. A new Li–Si–Mg alloy negative electrode material for use in high energy denisty rechargeable lithium cells, **38**, 363
new lithium–manganese composite oxide for the cathode of rechargeable lithium batteries, **34**, 147
a new way of obtaining $Li_xNi_{1-x}O$ cathodes for molten-carbonate fuel cells, **40**, 265
ω-$Li_xV_2O_5$ – a new electrode material for rechargeable lithium batteries, **34**, 113
performance of $30Li_2SO_4$:$70Ag_2SO_4$ solid electrolyte in galvanic cells, **27**, 331
performance of lithium alloy/lithium and calcium/lithium anodes in thionyl chloride cells, **15**, 239
performance of lithium/manganese oxide spinel electrodes in a lithium polymer electrolyte cell, **34**, 39
phase changes and diffusivity in the carbon/lithium electrode, **25**, 151
phase relations and conductivity in the system poly(ethylene oxide)/$LiClO_4$, **26**, 503
photoelectrochemistry of lithium, **43**, 157
polycarbofluorides for lithium sources of current with nonaqueous electrolyte, **45**, 25
a possible mechanism for the reduction of voltage delay in the Li/$SOCl_2$ system via cyanoacrylate coatings on lithium, **10**, 179
preparation and electrochemical characteristics of new Li/Mn/V/O system as positive materials for rechargeable lithium batteries, **44**, 635
preparation and electrochemical properties of double-metal nitrides containing lithium, **20**, 311
preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery, **5**, 89
on the processes responsible for the degradation of the aluminium/lithium electrode used as anode material in lithium aprotic electrolyte batteries, **9**, 235

pulse power characteristics of poly(3-methylthiophene) cathodes in $Li(SO_2)_3AlCl_4$ electrolyte, **36**, 175

on the possibility of using silver salts other than Ag_2CrO_4 in organic lithium cells, **3**, 347
precision cycling and Coulombic efficiency measurements in Li/MoS_2 and Li, Al/FeS cells, **26**, 293
preliminary elvaluation of rechargeable lithium cells for a totally-implantable venticular assist device, **41**, 87

primary 1.5 V lithium cells with $BiVO_4$ cathodes, **27**, 29
a rechargeable Li/Li_xCoO_2 cell incorporating a $LiCF_3SO_3$–NMP electrolyte, **44**, 673
reliability of commercial lithium button cells. I. Effect of the environment on the passivation resistance, **25**, 49
reliability of commercial lithium button cells. II. Effect of the state-of-discharge and environment on the passivation resistance, **25**, 61
reliablity analysis of lithium cells, **26**, 223
safety aspects in primary high-rate lithium cells, **43**, 259
secondary lithium cell based on $Li_x Cr_{1-y}O_yS_2$ obtained in potassium polysulphide melts, **34**, 119
single- and double-ion type cross-linked polysiloxane solid electrolytes for lithium cells, **41**, 291
a sol-gel route to composite positive electrodes for lithium cells with polymer electrolytes, **28**, 397
solid-state sodium cells — an alternative to lithium cells?, **26**, 341
solvent effects on rechargeable lithium cells, **20**, 279
status of the development of rechargeable lithium cells, **47**, 287
the use of the reactive ether, tetrahydrofuran (THF), in rechargeable lithium cells, **9**, 239
use of silver iodate as a cathode for lithium cells, **1**, 99
vanadium-doped lithium thiochromite: properties, crystal structure and electrochemical performance in rechargeable Li cells, **34**, 129
vanadium oxides as electrode materials for rechargeable lithium cells, **20**, 165
vanadium oxides in electrodes for rechargeable lithium cells, **20**, 157
vanadium and titanium oxides prepared by hydrolysis of alkoxides as insertion electrodes in lithium cells with polymeric electrolytes, **32**, 81
V_6O_{13} as cathode material for lithium cells, **14**, 235

Lithium chloride
properties of LiCl layers formed on lithium in various $SOCl_2$ solutions, **20**, 53

Lithium/copper compound cells
some aspects of lithium/copper compound cells in LiCl–KCl eutectic, **1**, 237

Lithium/copper molybdate
lithium/copper molybdate and lithium/copper tungstate organic solvent batteries, **2**, 265

Lithium/copper oxide battery(ies)
effects of an additive material, $CuFeS_2$, on Li/CuO battery performance, **20**, 119

Lithium/copper oxide cells
a high-temperature lithium/copper oxide cell with a solid polymer electrolyte, **35**, 235
the influence of preparation conditions on the electrochemical behaviour of CuO in a Li/CuO cell, **14**, 269

Lithium/copper tungstate
lithium/copper molybdate and lithium/copper tungstate organic solvent batteries, **2**, 265

Lithium/cupric sulfide cells
lithium/cupric sulfide cells, **9**, 409

Lithium electrodes
the a.c. response of lithium, stainless steel, and porous carbon electrodes in thionyl chloride solutions, **14**, 123
behaviour of the lithium electrode during cycling in nonaqueous solutions, **26**, 585
corrosion protection of secondary lithium electrodes in organic electrolytes, **20**, 253
cyclability of the lithium electrode, **20**, 9
the cycling behaviour and stability of the lithium electrode in propylene carbonate and acetonitrile electrolytes, **10**, 1
effects of alloying substrates on the characteristics of the lithium negative electrode, **26**, 573
inorganic film-forming electrolyte additives improving the cycling behaviour of metallic lithium electrodes and the self-discharge of carbon/lithium electrodes, **44**, 413
ionic transport in passivating layers on the lithium electrode, **44**, 365
the kinetics of charge transfer reactions on passive lithium electrodes, **26**, 129

the kinetics of charge-transfer reactions on passive lithium electrodes, **26**, 121
lithium electrode cycleability and morphology dependence on current density, **43**, 27
lithium electrodes based upon aluminium and alloy substrates. I. Impedance measurements on aluminium, **28**, 259
passivating films on lithium electrodes. An approach by means of electrode impedance spectroscopy, **14**, 45
polarization behavior of lithium electrode in polymeric solid electrolytes, **44**, 439
polarization of the lithium electrode in sulfuryl chloride solutions, **9**, 289
properties of a passivating film on the surface of lithium electrodes, **20**, 259
some problems of the cycleability of lithium electrodes, **26**, 563
status of the secondary lithium electrode, **6**, 357
a study of the properties of the surface layers formed on lithium electrodes in sulfolane-based electrolytes (extended abstract), **26**, 593

Lithium/electrolyte interfaces
film forming reaction at the lithium/electrolyte interface, **9**, 253

Lithium electrolytes
comparative determination of effective transport numbers in solid lithium electrolytes, **41**, 253
the effect of different internal surfaces in composite lithium electrolytes, **20**, 317
fabrication and characterizatin of amorphous lithium electrolyte thin films and rechargeable thin-film batteries, **43**, 103
lithium nitrate and lithium trifluoromethanesulfonate ammoniates for electrolytes in lithium batteries, **34**, 183
the preparation and electrochemical properties of chromium oxides CrO_x both in lithium and sodium aprotic electrolytes, **39**, 133

Lithium extraction
chemical lithium extraction from manganese oxides for lithium rechargeable batteries, **34**, 161

Lithium foils
a study of surface layers on lithium foils for batteries, **20**, 265

Lithium/graphitic oxide cells
lithium/graphitic oxide cells. Part II: high specific surface area graphitic oxide as cathode material for lithium batteries, **14**, 99
lithium/graphitic oxide cells. Part IV: Influence of electrolyte and cathode composition, **20**, 105
lithium graphitic oxide cells. Part V. An all-solid-state battery using graphite oxide as active cathodic material, **26**, 529

Lithium insertion
chemical and electrochemical lithium insertion into ternary transition metal sulfides MMo_2S_4 (M: V, Cr, Fe), **39**, 299
lithium insertion into TiS_2 from various electrolytes, **43**, 301

Lithium intercalation
transition metal displacement in cathodic host structures upon lithium intercalation, **43**, 277

Lithium intercalation battery(ies)
sulfone-based electrolytes for lithium intercalation batteries, **16**, 193

Lithium intercalation cathodes
modified chromium oxides for high-rate lithium intercalation cathodes, **26**, 409

Lithium iodide
interfacial conductionin lithium iodide containing inert oxides, **9**, 373
lithium iodide-based solid electrolytes, **9**, 161

Lithium/iodine battery(ies)
lithium/iodine batteries based on metal dibenzo(b,i)(1,4,8,11)tetraaza(14)-annulene-iodine charge transfer complexes, **22**, 69
modeling the discharge behaviour of the lithium/iodine battery, **43**, 111
a modified lithium/iodine battery, **37**, 355
performance of polyacrylonitrole-based cathodes in lithium/iodine solid state batteries, **19**, 37
performance and reliability of the lithium/iodine battery, **5**, 1
a study on novel lithium/iodine and lithium/bromine solid electrolyte batteries, **40**, 257

Lithium/iodine cells
improvement in discharge rate and low temperature characteristics of lithium/iodine cells, **14**, 173
the lithium/iodine cell for medical and commercial applications, **5**, 15
long-term discharge characteristics of lithium/iodine cells with an additive in poly(2-vinylpyridine) iodide, **20**, 141
Lithium ion conductor
electrochemical behaviors of Li^+ ion conductor, Li_3PO_4–Li_2S–SiS_2, **43**, 135
Lithium ion conductors
solid lithium ion conductors for battery applications, **14**, 105
Lithium ions
additive effects of Li^+ ion solvation compounds on $LiClO_4$–propylene carbonate electrolytic properties, **12**, 53
Lithium/iron sulfide systems
relationship between composition of the electrolyte slutions and energetic performance of 1.5 V non-aqueous cells of lithium/iron sulfide system, **44**, 355
Lithium liquid cathode battery(ies)
advances in primary lithium liquid cathod batteries, **26**, 51
Lithium/liquid cathode battery(ies)
chemical and electrochemical processes in some lithium/liquid cathode batteries, **34**, 81
Lithium/lithium propionate electrodes
study of a lithium/lithium propionate electrode in propylene carbonate, **10**, 111
Lithium/lithium vanadium oxide battery(ies)
lithium/lithium vanadium oxide secondary batteries. IV. Evaluation of fractors affecting the performance of test cells, **15**, 13
Lithium/manganese dioxide battery(ies)
the conductance behaviour of mixed organic electrolytes for a non-aqueous Li/MnO_2 battery, **34**, 189
some critical considerations in the design of multicell lithium/manganese dioxide batteries, **9**, 335
Lithium/manganese dioxide cells
the lithium/manganese dioxide cell. II. Behaviour of manganese dioxide in nonaqueous electrolyte, **25**, 177
the lithium/manganese dioxide cell. III. A comparison of electrolytic and chemical MnO_2 in lithium button cells at high discharge rates, **27**, 261
the lithium/manganese dioxide cell. I. Oxygen and water release during the thermal treatment of MnO_2, **25**, 167
the lithium/manganese dioxide cell. IV. Relationship between physicochemical properties and electrochemical characteristics of MnO_2 in nonaqueous electrolytes, **35**, 175
low temperature discharge characteristics of lithium/manganese dioxide cells, **8**, 35
relationship of cathode pore size distribution and rated capacity in Li/MnO_2 cells, **44**, 709
Lithium/metal sulfide battery(ies)
progress in US Government sponsored battery development (1978–1979); lithium/metal sulfide batteries, **5**, 365
Lithium/metal sulfide cells
Part II. Some operating characteristics of pelletized LiAl–FeS cells, **8**, 341
pelletized lithium/metal sulfide cells. Part I. A selective review, **8**, 327
Lithium microbattery(ies)
all-solid-state lithium microbatteries, **44**, 487
Lithium/molten nitrate thermal battery cells
discharge characteristics of lithium/molten nitrate thermal battery cells using silver salts as solid cathode materials, **16**, 243
Lithium molybdenum disulfide battery(ies)
a 65 A h rechargeable lithium molybdenum disulfide battery, **18**, 117
Lithium/molybdenum disulfide battery(ies)
rate limiting mechanisms in lithium–molybdenum disulfide batteries, **14**, 201
reproducibility and reliability of rechargeable lithium/molybdenum disulfide batteries, **25**, 265
Lithium negative electrodes
a review of cells based on lithium negative electrodes (anodes) **12**, 83
Lithium nitride halides
consideration of lithium nitride halides as solid electrolytes in practical galvanic cell applications, **6**, 251
Lithium organic cells
recent results regarding the storage capabilities of lithium organic cells using lithium perchlorate–ether solu-

tions as electrolyte, **15**, 191
Lithium organic electrolyte battery(ies)
anatase as a cathode material in lithium–organic electrolyte rechargeable batteries, **6**, 261
copper oxide cathodes for lithium organic electrolyte batteries, **16**, 309
on the use of rocking chair configurations for cyclable lithium organic electrolyte batteries, **8**, 289
Lithium organic solvent cells
characteristics of amorphous chromium oxide as a cathode for lithium organic solvent cells, **14**, 215
Lithium oxyhalide cells
optimized lithium oxyhalide cells, **44**, 715
studies in lithium oxyhalide cells for downhole instrumentation. Use of lithium tetrachlorogallate electrolyte in $Li/SOCl_2$ cells, **45**, 343
Lithium perchlorate
mechanism of ionic conduction in polyether–polyurethane networks containing lithium perchlorate, **20**, 339
recent results regarding the storage capabilities of lithium organic cells using lithium perchlorate–ether solutions as electrolyte, **15**, 191
structure–conductivity relationship in polymer electrolytes formed by network polymers from poly[dimethylsiloxane-g-poly(ethylene oxide)] and lithium perchlorate, **20**, 327
Lithium/polyaniline battery(ies)
development of cylindrical secondary lithium/polyaniline batteries, **44**, 669
Lithium/polyaniline cells
an all-solid-state lithium/polyaniline rechargeable cell, **39**, 255
a wound-type lithium/polyaniline secondary cell, **39**, 259
Lithium/polymer battery(ies)
lithium/polymer/polymer solid-state rechargeable batteries, **44**, 453
Lithium polymer cells
lead dioxides as cathodic materials for lithium polymer cells, **45**, 209
Lithium/polymer electrolyte battery(ies)
effect of non-stroichiometry on the electrode properties of zirconium diselenide in lithium/polymer electrolyte batteries (extended abstract), **26**, 273
Lithium primary power sources
silver selenate and silver tellurate as positive materials for lithium primary power sources, **3**, 257
Lithium propionate
study of a lithium/lithium propionate electrode in propylene carbonate, **10**, 111
Lithium salts
conductivities of 1,2-dimethoxyethane or 1,2-dimethoxyethane-related solutions of lithium salts, **41**, 77
conductivity and stability towards lithium metal of lithium triflate ($LiCF_3SO_3$) and lithium bistrifluorosulfonylimide $Li(SO_2CF_3)_2N$ in amines and their mixtures with ammonia, **44**, 349
ionic association of lithium salts in propylene carbonate/1,2-dimethoxyethane mixed systems for lithium batteries, **45**, 229
Lithium/silver vanadium oxide cells
heat dissipation from lithium/silver vanadium oxide cells during storage and low-rate discharge, **20**, 179
Lithium sulfate
electrical conductivity of the Li_2SO_4/Li_2CO_3 system, **10**, 191
Lithium/sulfur battery(ies)
rechargeable lithium/sulfur battery (extended abstract), **26**, 269
Lithium/sulfur cells
electrochemistry of a nonaqueous lithium/sulfur cell, **9**, 281
Lithium/sulfur dioxide battery(ies)
characterization of the chemistry at the anode and cathode in the Li/SO_2 battery system, **9**, 397
the effect of water on incinerated lithium/sulfur dioxide batteries, **18**, 371
Li/SO_2 rechargeable batteries, **35**, 153
the lithium/sulfur dioxide primary battery — its characteristics, performance and applications, **5**, 35
Lithium/sulfur dioxide cells
anodic passivation of lithium in electrolytes for Li/SO_2 cells at low temperatures, **13**, 327
chemical analysis of charges Li/SO_2 cells, **21**, 227
differential scanning calorimetry studies of possible explosion-causing mixtures in Li/SO_2 cells, **3**, 291

energy conversion by spontaneously reacting Li/SO_2 Cells, **7**, 365
investigation and production control of Li/SO_2 cells by the galvanostatic pulse method, **8**, 395
the lithium/sulfur dioxide cell I. The porous carbon black cathode, **6**, 337 II. Material balance, **6**, 347
new electrolytes for Li/SO_2 cells, **21**, 157
Raman and ^7Li NMR spectroscopic studies of Li/SO_2 rechargeable cells, **35**, 143
safety hazards associated with the charging of lithium/sulfur dioxide cells, **18**, 89
studies of high reliability long-life Li/SO_2 cells, **20**, 27
Lithium/sulfur dioxide system
the faradaic impedance of the lithium/sulfur dioxide system. A further examination of commercial cells, **19**, 7
Lithium/sulfuryl chloride battery(ies)
the lithium/sulfuryl chloride battery: discharge behaviour, **5**, 263
Lithium systems
impedance analysis of lithium systems, **20**, 135
optimization of composition of solid-phase cathodes for lithium systems with nonaqueous electrolyte, **45**, 21
Lithium tetrachlorogallate
studies in lithium oxyhalide cells for downhole instrumentation. Use of lithium tetrachlorogallate electrolyte in $Li/SOCl_2$ cells, **45**, 343
Lithium thermal battery(ies)
a pre-testable low temperature lithium thermal battery, **9**, 417
Lithium thiochromite
vanadium-doped lithium thiochromite: properties, crystal structure and electrochemical performance in rechargeable Li cells, **34**, 129
Lithium/thionyl chloride battery(ies)
a.c. impedance studies of the anodic passivating layer in lithium/$SOCl_2$ batteries, **25**, 123
characteristics of a lithium/thionyl chloride battery as a memory back-up power source, **20**, 47
development of lithium/thionyl chloride batteries for CENTAUR, **22**, 277
the effect of impurities on the performance of lithium intended for lithium/thionyl chloride battery manufacture, **24**, 95
fault tree safety analysis of a large $Li/SOCl_2$ spacecraft battery, **21**, 207
a high power lithium thionyl chloride battery for space applications, **43**, 317
the lithium/thionyl chloride battery - a review, **4**, 1
Raman spectroscopic studies of the structure of electrolytes used in the $Li/SOCl_2$ battery, **9**, 267
Lithium/thionyl chloride cells
abusive testing of large $Li/SOCl_2$ cells, **5**, 73
a.c. impedance studies on the lithium passivating layer of an $Li/SOCl_2$ cell (extended abstract), **26**, 419
in situ micro-Raman study of discharge products of $Li/SOCl_2$ cells, **20**, 69
design of a safe cylindrical lithium/thionyl chloride cell, **12**, 61
heat dissipation of high rate $Li/SOCl_2$ primary cells, **18**, 109
an improved lithium–vanadium pentoxide cell and comparison with a lithium–thionyl chloride cell, **14**, 135
investigation of positive elecrode characteristics in high rate $Li/SOCl_2$ cells, **10**, 343
Li/SO_4 rechargeable cells containing added bromine, **21**, 143
the $Li/SOCl_2$ cell, **24**, 253
$Li/SOCl_2$ cells for high temperature applications, **9**, 295
low temperature testing of $Li/SOCl_2$ cells, **26**, 211
micro-Raman study of electrode surface in $Li/SOCl_2$ cells (extended abstract), **26**, 439
primary $Li/SOCl_2$ cells. X. Optimization of D cells with respect to energy density, storability and safety, **5**, 57
quantitative investigation of the elemental sulfur distribution in discharged $Li/SOCl_2$ cells, **17**, 353
reaction products on current or potential reversal in $Li/SOCl_2$ cells, **13**, 287
reserve type lithium/thionyl chloride cells (extended abstract), **26**, 435
safety test results of lithium/thionyl chloride wound-type cells, **26**, 201

studies of advanced catalysts for Li/$SOCl_2$ cells, **26**, 597
studies in lithium oxyhalide cells for downhole instrumentation. Use of lithium tetrachlorogallate electrolyte in Li/$SOCl_2$ cells, **45**, 343
thermal modelling of a high power Li/$SOCl_2$ cell with parallel plates, **43**, 309
thermodynamic determinations for lithium/thionyl chloride and lithium/BrCl–thionyl chloride cells as a function of temperature and depth of discharge, **24**, 229
Lithium/thionyl chloride couple
thermodynamic measurements on the Li/$SOCl_2$ couple, **26**, 441
Lithium/thionyl chloride system
comparison of the behaviour of the Li/$SOCl_2$ and Ca/$SOCl_2$ systems at elevated temperatures, **28**, 325
effect of silver, copper and palladium additives on the performance of carbon electrodes in an Li/$SOCl_2$ system, **16**, 233
a possible mechanism for the reduction of voltage delay in the Li/$SOCl_2$ system via cyanoacrylate coatings on lithium, **10**, 179
reduction of voltage delay in the Li/$SOCl_2$ system – a study of polymers with chlorine substituent groups as delay reducing additives, **20**, 61
space-charge model of the SEI conduction in the Li/$SOCl_2$ system, **44**, 391
Lithium/titanium disulfide battery(ies)
the lithium/titanium disulphide secondary battery (extended abstract), **26**, 313
Lithium/titanium disulfide cells
advances in Li–TiS_2 cell technology, **36**, 395
galvanostatic cycling of lithium/titanium disulfide cells in propylene carbonate and propylene carbonate–acetonitrile electrolytes, **10**, 23
rechargeable lithium/titanium disulphide cells of spirally-wound design, **26**, 309
Lithium/titanium sulfide cells
examination of design options for 35 A h ambient temperature Li/TiS_2 cells, **18**, 127
Lithium/vanadium pentoxide cells
an improved lithium–vanadium pentoxide cell and comparison with a lithium–thionyl chloride cell, **14**, 135
Lithium/water battery(ies)
current efficiency in the lithium/water battery, **2**, 163
Load changes
transient response of 10-kW class advanced batteries to abrupt load changes, **24**, 31
Load frequency control
a battery storage test facility for load frequency control and instantaneous reserve, **17**, 267
Load levelling
battery load-levelling: activities in the Federal Republic of Germany and the Republica of South Africa, **23**, 201
customer-side-of-the-meter load-levelling test facility, **23**, 193
lead/acid batteries for load-levelling applications, **19**, 227
lead/acid batteries in U.S.A. load-levelling applications, **31**, 297
ten-megawatt lead-levelling lead/acid battery project, **23**, 183
Load management
load management in remote-area power-supply (RAPS) systems, **35**, 431
Load profiles
a simple methodology for obtaining battery discharge times (and vehicle ranges) for arbitrarily structured load profiles, **17**, 284
Long-life applications
the Li/$Cu_4O(PO_4)_2$ couple: a new version for long-life low-rate applications, **20**, 111
Long service life applications
Li–$AgBi(CrO_4)_2$: a new highly reliable lithium battery for long service life applications, **9**, 339
Luminescent solar concentrators
thermal damage in luminescent solar concentrators (LSC) for photovoltaic systems, **6**, 383
Lunar materials
the electrochemical generation of useful chemical species from lunar materials, **22**, 285, **29**, 321

Mössbauer spectroscopy

redox processes in the Li_xFeS_2/Li electrochemical system studied through crystal Mössbauer, and EXAFS analyses, **26**, 325
a study of pyrite-based cathodes for ambient temperature lithium batteries by *in situ* ^{57}Fe Mössbauer spectroscopy, **26**, 333
Magnesium
alternating-current impedance of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 51
corrosion of magnesium alloy in aqueous magnesium perchlorate battery electrolyte — a gasometry study, **39**, 107
experimental and theoretical investigation of voltage transients of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 295
magnesia porous particle separators for lithium–aluminum/iron sulfide batteries, **13**, 235
multinary alloy electrodes for solid state batteries. II. A new Li–Si–Mg alloy negative electrode material for use in high energy denisty rechargeable lithium cells, **38**, 363
performance characteristics of magnesium/*N*, *N'*-dichlorodimethylhydantoin primary cell, **34**, 303
Magnesium anodes
the delayed action of magnesium anodes in primary batteries. Part I. Experimental studies, **10**, 219
the delayed action of magnesium anodes in primary batteries. Part II. Theoretical studies, **10**, 243
open-circuit potentizl–time transient of the magnesium anode, **12**, 39
Magnesium battery(ies)
conductivity of low-temperature electrolytes for magnesium batteries, **39**, 155
mono methyl substituted *m*-dinitrobenzene compounds as cathode materials in magnesium batteries, **25**, 295
para-nitrotoluene as a depolarized for magnesium batteries, **39**, 121
performance characteristics of chloro-substituted dinitrobenzene for magnesium reserve batteries, **45**, 119
Magnesium electrodes
behaviour of magnesium electrodes in aqueous alkaline electrolytes, **1**, 221
discharge characteristics of solid-state cells with magnesium and copper electrodes and thin-film, **24**, 165
Magnesium/iodine battery(ies)
problems of manufacturing a magnesium/iodine battery, **41**, 299
Magnesium/manganese dioxide battery(ies)
the beneficial effect of increased cathode water content on Mg/MnO_2 battery performance, **32**, 271
Magnesium/manganese dioxide cells
analysis of the failure mechanisms in magnesium–manganese dioxide dry cells, **34**, 13
electrochemical determination of the anode film resistance and double layer capacitance in magnesium/manganese dioxide dry cells, **15**, 27
Magnesium/mercurous chloride battery system
preliminary report in the performance characteristics of the magnesium/mercurous chloride battery system, **1**, 371
Magnesium perchlorate
corrosion of magnesium alloy in aqueous magnesium perchlorate battery electrolyte — a gasometry study, **39**, 107
cyclic voltammetric study of quinone–hydroquinone organic system in aqueous magnesium perchlorate electrolyte, **45**, 177
Magnetoresistance
the magnetoresistance of lead dioxide powder, **4**, 171
Maintenance-free battery(ies)
developments in stationary maintenance-free lead/acid batteries, **19**, 201
effect of gelling on the electrode kinetics of the $Pb/PbSO_4$ and hydrogen-electrode reactions in maintenance-free lead/acid batteries, **50**, 67
estimation of the residual capacity of maintenance-free lead/acid batteries. Part 1. Identification of a parameter for the prediction of state-of-charge, **27**, 287
grid alloys for maintenance-free deep-cycling batteries, **33**, 3

high-performance maintenance-free lead/acid batteries, **31**, 145
influence of cobalt ions on the behaviour of maintenance-free lead/acid batteries with antimony alloys, **31**, 151
influence of separators, expanders and electrolyte purity on the performance of maintenance-free lead/acid batteries, **31**, 183
lead alloys for maintenance-free and sealed lead/acid batteries, **46**, 327
maintenance-free industrial lead/acid batteries, **23**, 135
a new lead–calcium alloy for maintenance-free lead/acid batteries, **31**, 163
quality test of lead accumulators, especially of maintenance-free, sealed lead batteries with immobilized electrolyte, **17**, 160
sealed maintenance-free lead/acid batteries: properties and applications of a new battery generation, **23**, 143
Maintenance-free cells
maintenance-free motive-power cells using gas-recombination technology, **33**, 135
Manganese
aluminium and manganese as anodes for dry and reserve batteries, **11**, 155
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–MnO_2 system, **41**, 223
a high performance Li_xMnO_y cathode material for rechargeable lithium cells, **44**, 681
investigations on rechargeable lithium alloys on the basis of Al–Ni and A–Mn alloys, **44**, 421
low temperature discharge characteristics of lithium/manganese dioxide cells, **8**, 35
preparation and electrochemical characteristics of new Li/Mn/V/O system as positive materials for rechargeable lithium batteries, **44**, 635
rechargeable $Li/LiMn_2O_4$ batteries with a polymeric solid electrolyte, **41**, 315
recovery of zinc and manganese from spent batteries, **48**, 389
structural and electrochemical characteristics of a hollandite-type 'Li_xMnO_2', **44**, 657
studies of spinel $LiCr_xMn_{2-x}O_4$ for secondary lithium battery, **44**, 539
an update of the Li metal-free rechargeable battery based on $Li_{1+x}Mn_2O_4$ cathodes and carbon anodes, **44**, 689
Manganese cells
a new type of nonpoisonous addition agent for substituting mercury in zinc/manganese dry cells, **45**, 169
Manganese dioxide
alternating-current impedance of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 51
analysis of the failure mechanisms in magnesium–manganese dioxide dry cells, **34**, 13
battery manganese dioxide — a survey of its history and etymology, **8**, 133
the beneficial effect of increased cathode water content on Mg/MnO_2 battery performance, **32**, 271
the conductance behaviour of mixed organic electrolytes for a non-aqueous Li/MnO_2 battery, **34**, 189
discharge characteristics of CMD, EMD, rho and synthetic birnessite in concentrated alkaline electrolyte, **23**, 309
electrochemical and catalytic reactivity of manganese dioxides, **35**, 91
electrochemical characteristics of MnO_2–V_2O_5 composites serving as positive material for secondary lithium batteries, **35**, 313
electrochemical determination of the anode film resistance and double layer capacitance in magnesium/manganese dioxide dry cells, **15**, 27
electrochemical insertion of lithium in manganese dioxide, **14**, 141
electrochemical and structural studies of the composite MnO_2 cathode doped with metal oxides, **44**, 533
electrolytic manganese dioxides for battery applications: studies using electron paramagnetic resonance, **40**, 355
experimental conditions for the preparation of manganese dioxides with high oxidizing capability and high electrochemical reactivity, **39**, 349

experimental and theoretical investigation of voltage transients of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 295
impedance study of the interfaces between lithium, polyaniline, lithium-doped MnO_2 and modified poly(ethylene oxide) electrolyte, **43**, 83
improvement of lithium-containing manganese dioxide (composite dimensional manganese oxide: CDMO) as positive material for lithium secondary batteries, **39**, 51
investigation of an electrolyte for lithium secondary batteries with lithium-containing manganese dioxide as the positive material, **43**, 217
I. Kinetics of reduction of manganese dioxide by ascorbic acid and hydrazine solutions, **22**, 133
II. Kinetics of the catalytic decomposition of hydrogen peroxide solution by manganese dioxide samples, **22**, 149
lithium-containing manganese dioxide (composite dimensional manganese oxide: CDMO) as positive material for a lithium secondary battery, **32**, 373
the lithium/manganese dioxide cell. II. Behaviour of manganese dioxide in nonaqueous electrolyte, **25**, 177
the lithium/manganese dioxide cell. III. A comparison of electrolytic and chemical MnO_2 in lithium button cells at high discharge rates, **27**, 261
the lithium/manganese dioxide cell. I. Oxygen and water release during the thermal treatment of MnO_2, **25**, 167
the lithium/manganese dioxide cell. IV. Relationship between physicochemical properties and electrochemical characteristics of MnO_2 in nonaqueous electrolytes, **35**, 175
manganese dioxide – A review of a battery chemical. Part I. Chemical syntheses and X-ray diffraction studies of manganese dioxides, **15**, 209
manganese dioxide – A review of a battery chemical. Part II. Solid state and electrochemical properties of manganese dioxides, **16**, 1
optimizing the parameters of cell expansion in alkaline manganese dioxide button cells, **32**, 9
overcharge protection of MnO_2 cathodes, **36**, 45
performance characteristics of Li/MnO_2–CF_x hybrid cathode jellyroll cells, **19**, 325
preparation and properties of electrolytic manganese dioxide, **42**, 335
rechargeable γ-MnO_2 for lithium batteries using a sulfone-based electrolyte at 150 °C, **44**, 569
rechargeable lithium battery with spinel-related λ-MnO_2. I. Synthesis of λ-MnO_2 for battery applications, **44**, 551
rechargeable lithium battery with spinel-related MnO_2. II. Optimization of the $LiMn_2O_4$ synthesis conditions, **41**, 305
relationship of cathode pore size distribution and rated capacity in Li/MnO_2 cells, **44**, 709
some critical considerations in the design of multicell lithium/manganese dioxide batteries, **9**, 335
synthesis and characterization of γ-MnO_2 from $LiMn_2O_4$, **26**, 355
thermoelectronic e.m.f. of battery grade manganese dioxide, **7**, 95
ultra-thin manganese dioxide/lithium battery for multifunctional IC cards (extended abstract), **26**, 369
the versatility of MnO_2 for lithium battery applications, **43**, 289
the voltage discharge characteristics of manganese dioxides, **23**, 295
Manganese dioxide cathodes
the influence of a CrO_3–graphite intercalation compound on the discharge characteristics of an MnO_2 cathode in alkaline electrolyte, **25**, 133
Manganese dioxide electrodes
anodic stability of propylene carbonate on manganese dioxide electrodes, **44**, 341
manganese dioxide electrode. VII. Experimental determination and a simple theoretical description of the electrical potential of solid solutions in the range γ-MnO_2 to δ-MnOOH, **8**, 113

non-linear simulation of current distribution and potential profile in porous manganese dioxide electrodes during discharge, **6**, 25
the molybdenum trioxide doped manganese dioxide electrode. II. Electron spin resonance studies of doped manganese dioxides, **1**, 73
the molybdenum trioxide doped manganese dioxide electrode. I. Use as low temperature battery cathodes, **1**, 65
Manganese dioxide/hydrogen battery(ies)
a new concept for high-cycle-life LEO: rechargeable MnO_2–hydrogen batteries, **29**, 333
Manganese dioxide/lithium cells
a study on electrolytes for manganese dioxide/lithium cells, **43**, 253
Manganese dioxide powder
electrical characteristics of a highly hydrated battery grade manganese dioxide powder, **4**, 77
influence of fine materials on thickness and conductivity of manganese dioxide powder under pressure – a technical note, **4**, 281
Manganese dioxide/zinc cells
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, **41**, 321
the effect of the amount of electrolyte in the anode gel on the rechargeabilitty of alkaline manganese dioxide/zinc cells, **27**, 145
electrochemical charactrization of flat-plate rechargeable alkaline manganese dioxide/zinc cells, **47**, 13
rechargeability of manganese dioxide/zinc cell using zinc sulfate electrolyte, **48**, 303
Manganese ores
electrochemical behaviour of some activated manganese ores, **34**, 207
Manganese oxides
chemical lithium extraction from manganese oxides for lithium rechargeable batteries, **34**, 161
manganese oxides for a lithium secondary battery – composite dimensional manganese oxide (CDMO), **26**, 389
new lithium–manganese composite oxide for the cathode of rechargeable lithium batteries, **34**, 147
performance of lithium/manganese oxide spinel electrodes in a lithium polymer electrolyte cell, **34**, 39
Manufacture
age hardening of a Pb–0.1wt.%Ca–0.3wt.%Sn alloy and the effects of heat during battery manufacturing on this process, **42**, 35
present and future of lead/acid battery manufacture in the Commonwealth of Independent States (formerly the USSR), **42**, 277
problems of manufacturing a magnesium/iodine battery, **41**, 299
towards improved manufacture of lead/acid batteries – panel discussion, **38**, 197
Marine applications
marine and naval applications of fuel cells for propulsion: the process selection, **29**, 169
Marketing
marketing forecast – the Indian scene, **31**, 383
Mass production
construction of miniature silver/zinc batteries and the technology for their mass production, **8**, 67
Mass spectrometry
TGA/MS studies of the thermal decomposition of NH_4VO53, **26**, 461
Mass transport
high energy efficiency and high power density proton exchange membrane fuel cells – electrode kinetics and mass transport, **36**, 299
mass transport during lead/acid battery plate formation, **18**, 337
Mass transport processes
the influence of mass transport processes on the performance of the lead/acid cell, **9**, 19
the influence of mass transport processes on the performance of the lead/acid cell on pulsed discharge, **10**, 53
Material balance
the lithium/sulfur dioxide cell I. The porous carbon black cathode, **6**, 337 II. Material balance, **6**, 347
Material dispersion
the influence of material dispersion on the redox behaviour of nickel oxide

electrodes, **12**, 203
Mathematical modelling
mathematical modelling of current-potential curves for the Pb/H_2SO_4 system, **30**, 243
mathematical modelling of tubular-plate lead/acid batteries, **30**, 227
a mathematical model and optimization of the structure for porous air electrodes, **32**, 207
mathematical models for anodic polarization of the lead/acid positive electrode, **30**, 237
Mechanical characteristics
testing the mechanical characteristics of sintered nickel battery plaque and their relationship to nickel electrode performance, **6**, 171
Mechanical compression
plastic-bonded electrodes for nickel/cadmium accumulators. V. Influence of the current collector and mechanical compression on the current carrying capability of the nickel oxide electrode, **6**, 161
Mechanical stress
an estimation of the mechanical stress in nickel electrode sinter and its implications for nickel electrode construction, **12**, 267
Mechanistic aspects
the reactivity of organic electrolytes with lithium: mechanistic aspects, **9**, 247
Mechanistic studies
mechanistic studies of oxide electrodes reversibly incorporating Li^+ ions, **9**, 307
mechanistic studies of reversible layer-type electrodes, **9**, 345
Medical applications
the lithium/iodine cell for medical and commercial applications, **5**, 15
Medical devices
parasitic reactions and the balance of materials in lithium batteries for implantable medical devices, **43**, 119
MEEP
impedance studies on the systtem $LiClO_4$/MEEP, **26**, 483
Membrane systems
behaviour of polymer (poly(vinyl chloride)) membrane systems, **9**, 137
Memory back-up power source
characteristics of a lithium/thionyl chloride battery as a memory back-up power source, **20**, 47
Memory effect
effect of previous charge/discharge history on the capacity of the PbO_2PbSO_4 electrode: the hysteresis or memory effect, **25**, 27
Meniscus cell
the meniscus cell – partially immersed gas-diffusion electrodes. Part II. Modelling, **50**, 121
the meniscus cell. Part I. Experimental, **50**, 109
Mercury
capacity of zinc/mercuric oxide cells, **3**, 359
charge–discharge behaviour of lead/mercury cell in aqueous sulphuric acid, **35**, 183
expander action at the $Pb(Hg)/PbCl_2$ interface, **2**, 137
a new type of nonpoisonous addition agent for substituting mercury in zinc/manganese dry cells, **45**, 169
preliminary report in the performance characteristics of the magnesium/mercurous chloride battery system, **1**, 371
preliminary studies on a rechargeable acidic lead/mercury battery, **32**, 187
self-discharge of low-mercury zinc/silver-oxide button cells, **22**, 163
Mercury electrodes
electrochemical phase-formation processes at a mercury electrode in sulfuric acid, **32**, 401
Metal/air battery(ies)
metal/air batteries: their status and potential - a review, **4**, 263
oxide-based bifunctional oxygen electrode for rechargeable metal/air batteries, **25**, 141
progress in US Government sponsored battery development (1978–1979); metal/air batteries, **5**, 337
Metal carbides
electrochemical reactions on some cemented metal carbides, **6**, 229
Metal chelates
electrocatalysis of the oxygen reduction process on metal chelates in acid electrolyte, **2**, 233
Metal chlorides

sodium/metal chloride battery research at the Jet Propulsion Laboratory (JPL), **36**, 385
Metal deposition
metal depositon and dissolution monitored by *in situ* scanning tunneling microscopy, **43**, 169
Metal dioxides
conductivity measurements on pure and mixed metal dioxides, **4**, 203
Metal electrodes
catalytic infleunce of underpotentially deposited submonolayers of different metals in ethylene glycol oxidation on various noble metal electrodes in alkaline medium, **46**, 17
Metal hydride electrodes
surface modification of metal hydride negative electrodes and their charge/discharge performance, **38**, 335
Metal hydrides
alloys for hydrogen storage in nickel/hydrogen and nickel/metal hydride batteries, **47**, 261
impedance measurements on a spiral-wound nickel/metal hydride cell cycled in a simulated low earth orbit, **47**, 277
Metal ions
incorporation mechanism for doping of metal ions into a passivating film at the lithium/thionyl chloride interface, **45**, 7
Metallic oxides
electrochemical behaviour of metallic oxides, **4**, 183
Metallurgy
metallurgy of recycled lead for recombinant batterues, **42**, 25
trends in lead/acid battery alloy use and metallurgy, **19**, 133
Metal nitrides
preparation and electrochemical properties of double-metal nitrides containing lithium, **20**, 311
Metal oxides
electrochemical and structural studies of the composite MnO_2 cathode doped with metal oxides, **44**, 533
a new method for examining mixtures of two crystalline varieties of a metal oxide for positive battery electrodes, **8**, 121
the SWING system, a nonaqueous rechargeable carbon/metal oxide cell, **43**, 223
Metal oxysulfides
V_2O_4S — a new transition metal oxysulfide as positive for lithium batteries, **44**, 577
Metal screens
plastic/bonded electrodes for nickel/cadmium accumulators. VII. Influence of different metal screens on the oxygen recombination rate on plastic/bonded cadmium electrodes, **7**, 113
Metal sulfides
chemical and electrochemical lithium insertion into ternary transition metal sulfides MMo_2S_4 (M: V, Cr, Fe), **39**, 299
effect of metal-sulfide additives on charge/discharge reactions of the alkaline iron electrode, **41**, 99
electrochemical behaviour of metal sulfides as cathodes in primary lithium batteries, **14**, 65
pelletized lithium/metal sulfide cells. Part I. A selective review, **8**, 327
pelletized lithium/metal sulfide cells. Part II. Some operating characteristics of pelletized LiAl–FeS cells, **8**, 341
progress in US Government sponsored battery development (1978–1979); lithium/metal sulfide batteries, **5**, 365
Metal technology
copper-stretch-metal technology and applications, **19**, 147
Methanol
advances in direct oxidation methanol fuel cells, **47**, 377
proton-exchange membrane regenerative fuel cells, **47**, 343
utilization of methanol for polymer electrolyte fuel cells in mobile systems, **49**, 299
Methanol/air fuel cells
the methanol/air fuel cell: a selective review of methanol oxidation mechanisms at platinum electrodes in acid electrolytes, **4**, 191
Methanol fuel cells
efficiencies of heat engines and fuel cells: the methanol fuel cell as a competitor to Otto and Diesel engines, **7**, 215

Methanol oxidation
the methanol/air fuel cell: a selective review of methanol oxidation mechanisms at platinum electrodes in acid electrolytes, **4**, 191
methanol oxidation on carbon-supported platinum–tin electrodes in sulfuric acid, **50**, 295
methanol oxidation and hydrogen reactions on NiZr in acid solution, **45**, 291
studies of electrochemical oxidation of methanol on platinum in phosphoric acid solution, **36**, 11
Microbattery(ies)
all-solid-state lithium microbatteries, **44**, 487
integrable lithium solid-state microbatteries, **26**, 615
a thin-film solid-state microbattery, **44**, 505
Microcalorimetry
microcalorimetric studies on lithium thionyl chloride cells: temperature effects between 25 °C and −40 °C, **39**, 83
Microelectrodes
the electrochemistry of porous zinc. II. The polarisation behaviour of plain and polymer-bonded microelectrodes in KOH solutions, **15**, 245
Microstructure
microstructure of plastic-bonded nickel electrodes, **8**, 55
Migration
migration of soluble cadmium species in nickel/cadmium cells, **3**, 175
thin layer actiation studies of material migration during the operation of lead/acid cells, **37**, 415
Military applications
military applications of lithium batteries, **26**, 243
Mixed conduction
thermal efficiency of solid electrolyte fuel cells with mixed conduction, **1**, 311
Mixed electrolytes
dialkoxyethane–propylene carbonate mixed electrolytes for lithium secondary batteries, **13**, 261
Mixed oxides
central role of electrode interconnection material in high temperature fuel cell batteries. Part II. Study of selected highly conducting mixed oxides, **1**, 203
Model calculations
investigations of the negative plate of lead/acid cells. 3. Model calculations of the impedance of self-similar porous electrodes, **50**, 89
Modelling
lead/acid batteries for photovoltaic applications. Test results and modelling, **47**, 109
the meniscus cell — partially immersed gas-diffusion electrodes. Part II. Modelling, **50**, 121
modeling the discharge behaviour of the lithium/iodine battery, **43**, 111
modeling the effects of electrolyte diffusion and paste conductivity on lead/acid battery performance, **46**, 49
modeling lead/acid batteries that have positive electrodes containing hollow, glass microspheres, **46**, 39
modeling the occurrences of cell reversals in long strings of lead/acid cells, **41**, 277
parametric modelling of the performance of a 5-kW proton-exchange membrane fuel cell stack, **49**, 349
thermal modelling of a high power Li/$SOCl_2$ cell with parallel plates, **43**, 309
Models
the agglomerate-of-spheres model. Theoretical considerations, **46**, 211
an aggregate model of the positive electrode system of the lead/acid cell. II. Simulation results, **41**, 39
an aggregate model for the positive electrode system of the lead/acid cell. I. Model development, **41**, 25
an approximate model for estimating the faradaic efficiency loss in zinc/bromine batteries caused by cell self-discharge, **50**, 343
experimental study of the alkalization model for the $PbSO_4$ anodic layer on lead/acid positive-plate grids, **46**, 263
a simplified model of the lead/acid battery, **46**, 251
a simulation model for integrated molten carbonate fuel cells systems, **49**, 283

space-charge model of the SEI conduction in the Li/$SOCl_2$ system, **44**, 391
three-elemental models for the positive electrode of the lead/acid cell. II. Simulation results, **41**, 13
three-elemental models for the positive electrode of the lead/acid cell. I. Model development, **41**, 1
Moisture control
battery dry room facility. Relationship between the dry room parameters and the moisture control unit (extended abstract), **26**, 603
Molten carbonate
characterization of nickel oxide in molten carbonate. I. Electrochemical behaviour of higher nickel oxide in molten carbonate, **32**, 125
characterization of nickel oxide in molten carbonate. II. *In situ* X-ray diffraction of higher nickel oxide in molten carbonate, **32**, 135
Molten carbonate fuel cells
cell performance of molten-carbonate fuel cell with alkali and alkaline-earth carbonate mixtures, **39**, 285
development and characterization of novel cathode materials for molten carbonate fuel cell, **49**, 227
effect of operating temperature on the performance of molten-carbonate fuel cells, **36**, 69
electrolyte management of molten-carbonate fuel cells, **36**, 529
improvement of molten-carbonate fuel cell (MCFC) lifetime, **39**, 369
mass and energy balances in a molten-carbonate fuel cell with internal reforming, **39**, 203
M-C power commercialization program for MCFC power plants, **37**, 165
mechanism of *in situ* surface modification of molten-carbonate fuel cell anode, **35**, 123
the molten carbonate fuel cell programme in The Netherlands, **29**, 77
a new way of obtaining $Li_xNi_{1-x}O$ cathodes for molten-carbonate fuel cells, **40**, 265
pack aluminization of nickel anode for molten carbonate fuel cells, **49**, 245
a simulation model for integrated molten carbonate fuel cells systems, **49**, 283
surface modification of nickel electrodes for molten carbonate fuel cells, **24**, 207
technological status of nickel oxide cathodes in molten carbonate fuel cells, **24**, 1
Molten nitrate electrolytes
the high rate discharge characteristics of silver chromate, silver molybdate, and silver tungstate cathodes in molten nitrate electrolytes, **15**, 141
Molten salt cells
high rate molten salt cells employing barium nickel sulfide cathodes, **37**, 325
Molten salt electrochemical cells
primary and secondary room temeprature molten salt electrochemical cells, **15**, 109
Molten salt electrolytes
investigation of lithium intercalation materials with organic solvents and molten salts as electrolytes at temperatures between 60 and 175 °C, **20**, 221
molten salt electrolytes for high-temperature lithium cells, **26**, 37
Molybdenum
a 65 A h rechargeable lithium molybdenum disulfide battery, **18**, 117
a comparative electrochemical study of MoO_3, V_2O_5 and MoV_2O_8 as rechargeable cathodes in lithium cells, **24**, 85
cycling behaviour of molybdenum dichalcogenides in aprotic organic electrolyte solution, **14**, 223
the discharge reaction mechanism of the MoO_3 electrode in organic electrolytes, **1**, 267
electrochemical performance of silver/molybdotungstate-amorphous-electrolyte cells with charge-transfer-complex cathodes, **25**, 287
electrochemical reactions on some cemented metal carbides, 229
evaluation and optimization of pelletized LiAl/$NaAlCl_4$/$MoCl_5$ electrochemical cells, **3**, 81
factors affecting the internal resistance of silver/silver molybdate/iodine cells, **45**, 255
forces generated by anode growth in cylindrical Li/MoS_2 cells, **34**, 31

insertion of lithium into vanadium molybdenum oxides, **20**, 187
the $LiAl/NaAlCl_4/MoCl_5$ thermal battery, **3**, 95
$(Mo_{0.3}V_{0.7})_2O_5$ as a solid solution cathode for Li cells. Part I. Electrochemical behaviour of primary cells, **7**, 133
$(Mo_{0.3}V_{0.7})_2O_5$ as a solid solution cathode for Li cells. Part II. Structural characteristics and secondary cells, **7**, 145
molybdic oxides as cathode active materials in secondary lithium batteries, **26**, 373
nickel chevrel-phase sulfides $Ni_yMo_6S_{8-z}O_n$ as the cathode of lithium secondary batteries, **44**, 651
n-$MoSe_2$ grafted with polycarbazole for an extended life of the photoanode, **32**, 1
photocatalytic behaviour of *n*-$MoSe_2$ single crystals in contact with the I^-, I_2 redox couple in solar photoelectrochemical cells, **7**, 275
precision cycling and Coulombic efficiency measurements in Li/MoS_2 and Li, Al/FeS cells, **26**, 293
rate limiting mechanisms in lithium–molybdenum disulfide batteries, **14**, 201
a rechargeable lithium battery employing a porous thin film of $Cu_{3+\delta}Mo_6S_{7.9}$, **20**, 199
reproducibility and reliability of rechargeable lithium/molybdenum disulfide batteries, **25**, 265
testing methods for lithium molybdenum disulfide intercalation batteries, **17**, 153

Molybdenum trioxide
the molybdenum trioxide doped manganese dioxide electrode. II. Electron spin resonance studies of doped manganese dioxides, **1**, 73
the molybdenum trioxide doped manganese dioxide electrode. I. Use as low temperature battery cathodes, **1**, 65

Molybdenum trisulfide cathodes
molybdenum trisulfide thin film cathodes prepared by chemical vapour deposition (extended abstract), **26**, 103

Motive power
tubular positive plate batteries for motive power and electric vehicle applciations, **40**, 39

Motorcycles
development of electric motor cycle technologies in Taiwan, **48**, 243
sealed lead/acid battery for motorcycle use, **33**, 117

Multiple-channel systems
computer-controlled multiple-channel system for electrochemical experiments, **10**, 149

Multivariate analysis
multivariate analysis of data from fabrication, testing and operation of a large lead/acid peak-shaving battery, **37**, 379

Negative plates
in situ conductance measurements of lead accumulator negative plates, **10**, 271

Nickel
cyclic voltammetric studies of electrodeposited solid solution and composite oxide/hydroxide electrodes in 1 M KOH: the $Co(OH)_2$–$Ni(OH)_2$–MnO_2 system, **41**, 223
the cycling properties of the $Li_xN_{1-y}Co_yO_2$ electrode, **44**, 595
dissolution behaviour of copper and nickel oxides in molten $Li_2CO_3/Na_2CO_3/K_2CO_3$, **23**, 357
earth radiation budget satellite (ERBS) orbiting profiles and Ni/Cd use, **21**, 291
effect of Cd, Ni, Zn, and Co ions on electrode reactions of the lead/acid battery, **32**, 43
the effect of pulse charging on the cycle-life performance of zinc/nickel oxide cells, **22**, 77
effects of sulfur additive on the performance of $Na/NiCl_2$ cells, **48**, 349
electrical properties of nickel hydroxide for alkaline cell systems, **48**, 361
high rate molten salt cells employing barium nickel sulfide cathodes, **37**, 325
investigations on rechargeable lithium alloys on the basis of Al–Ni and A–Mn alloys, **44**, 421
Li/Li_xNiO_2 and Li/Li_xCoO_2 rechargeable systems: comparative study and per-

formance of practical cells, **43**, 209
methanol oxidation and hydrogen reactions on NiZr in acid solution, **45**, 291
migration of cobalt in nickel oxide/hydroxide active material of a nickel electrode in a Ni/H_2 cell, **50**, 57
nature of the oxidizing centres in transition metal phosphorus trisulfides MPS_3 (Mfle, Ni)), **20**, 205
a new way of obtaining $Li_xNi_{1-x}O$ cathodes for molten-carbonate fuel cells, **40**, 265
nickel–hydrogen capacity loss on storage, **29**, 541
nickel chevrel-phase sulfides $Ni_yMo_6S_{8-z}O_n$ as the cathode of lithium secondary batteries, **44**, 651
oxygen recombination rate on plastic-bonded cadmium electrodes doped with nickel(II) hydroxide, **19**, 55
properties of amorphous nickel hexathiodiphosphate, $Ni_2P_2S_6$, **26**, 319
reduction of oxygen on $LaNiO_3$ in alkaline solution, **10**, 319
statistically determined nickel/cadmium performance relationships, **21**, 333

Nickel anode
pack aluminization of nickel anode for molten carbonate fuel cells, **49**, 245

Nickel battery plaque
testing the mechanical characteristics of sintered nickel battery plaque and their relationship to nickel electrode performance, **6**, 171

Nickel/cadmium accumulators
current distribution in lead/acid and nickel/cadmium accumulators, **27**, 45
estimation of the pressure in hermetic Ni/Cd accumulator from its low-frequency impedance, **34**, 323
optimisation of active material for positive electrodes of Ni/Cd accumulators, **8**, 9
oxygen reduction rate at teflon-bounded cadmium electrodes in sealed nickel/cadmium accumulators, **25**, 1
plastic-bonded electrodes for nickel/cadmium accumulators. I. Cadmium electrode, **4**, 227
plastic-bonded electrodes for nickel/cadmium accumulators. II. Basic electrochemical parameters of the nickel oxide electrode, **4**, 239
plastic-bonded electrodes for nickel/cadmium accumulators. III. Influence of active layer composition on galvanostatic and potentiostatic discharge curves, **4**, 349
plastic-bonded electrodes for nickel/cadmium accumulators. IV. Some specific problems of the positive active layer, **5**, 207
plastic-bonded electrodes for nickel/cadmium accumulators. V. Influence of the current collector and mechanical compression on the current carrying capability of the nickel oxide electrode, **6**, 161
plastic-bonded electrodes for nickel/cadmium accumulators. VI. Oxygen recombination rate on sealed cell cadmium electrodes, **7**, 65
plastic-bonded electrodes for nickel/cadmium accumulators. VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, **7**, 113
plastic-bonded electrodes for nickel/cadmium accumulators. VIII. Study of oxygen recombination rate on plastic-bonded cadmium electrodes provided with active carbon catalyst, **8**, 3
plastic-bonded electrodes for nickel/cadmium accumulators. X. The nature of the second discharge step of nickel oxide elecrodes, **8**, 351

Nickel/cadmium battery(ies)
advanced nickel/cadmium batteries for geosynchronous spacecraft, **22**, 243
the design and applicationof nickel/cadmium batteries in space, **15**, 119
design, development, performance, and reconditioning of Ni/Cd batteries using polypropylene separators, **12**, 305
a failure model for sealed nickel/cadmium batteries, **8**, 369
internal impedance of nickel/cadmium batteries with applications to space, **38**, 295
measurement of the tortuosity factor of Ni/Cd battery electrodes by an improved conductivity method, **3**, 167
thermal simulation of NiCd batteries for spacecraft, **2**, 147

Nickel/cadmium cells
an advanced nickel/cadmium battery cell design, **18**, 155

aerospace nickel/cadmium cell separator qualification program, **18**, 147
on the anomalous behaviour of deeply discharged, sealed Ni–Cd cells, **8**, 403
chemical impregnation and sinter corrosion in plaques for nickel/cadmium cells, **28**, 247
a computer-controlled discharge unit for the testing of nickel/cadmium cells and batteries, **16**, 119
degradation in nickel/cadmium cells studied by impedance measurements, **12**, 289
effects of long term storage on aerospace nickel/cadmium cell performance, **21**, 297
effect of tetra-alkyl ammonium compounds on the performance of electrodes of sintered plate nickel/cadmium cells, **1**, 81
electrode kinetics of a nickel/cadmium cell and failure-mode prediction. Estimation of equivalent resistance of an internal short, **19**, 67
electrolyte fill quantity and limiting capacity in sealed nickel/cadmium cells, **32**, 19
a flooded–starved design for nickel/cadmium cells, **18**, 161
impedance of nickel/cadmium cells with nylon separator hydrolysate, **50**, 375
impedance peaks of sealed nickel/cadmium cells at low states-of-charges, **37**, 335
impedance studies of nickel/cadmium and nickel/hydrogen cells using the cell case as a reference electrode, **29**, 467
investigation of long term storage effects on aerospace nickel/cadmium cell performance, **18**, 191
limitations in the use of plastic-bonded electrodes in sealed nickel/cadmium cells and their reasons. II. Button cells, **21**, 67
limitations in the use of plastic-bonded electrodes in sealed nickel/cadmium cells and their reasons. I. Prismatic and cylindrical cells, **21**, 9
mathematics of coiling in cylindrical electrochemical cells: the theory of a spiral bounded by two circles and its application to the spiral-wound nickel/cadmium cell, **3**, 311
migration of soluble cadmium species in nickel/cadmium cells, **3**, 175
modeling nickel/cadmium performance: planned alternations to the Goddard battery model, **18**, 179
a nickel/cadmium cell residual charge analyser, **13**, 75
NOAA 26.5 A h LEO characterization test, **18**, 209
preliminary evaluation of nickel/cadmium cells for a totally implantable ventricular assist device, **39**, 67
protection of sealed Ni/Cd cells from cell voltage reversal. I. Experimental conditions for the formation of cadmium bridges, **14**, 285
protection of sealed nickel/cadmium cells against cell voltage reversal. II. Influence of the separator on the formation of cadmium bridges, **16**, 253
qualification testing of General Electric 50 A h nickel/cadmium cells with new separator and new positive-plate processing, **18**, 135
qualification testing of General Electric 50 A h nickel/cadmium cells with Pellon 2536 separator and passivated positive plates, **21**, 313
real time charge efficiency monitoring for nickel electrodes in nickel/cadmium and nickel/hydrogen cells, **21**, 327
sealed Ni/Cd cells: the temperature behaviour of electrodes in excess of electrolyte, **6**, 1
self-discharge characteristics of spacecraft nickel/cadmium cells at elevated temperatures, **18**, 169
studies on the storage of elecrochemically impregnated nickel/cadmium cells, **50**, 81
temperature dependence of hydrogen evolution reaction on nickel oxide electrode in sealed nickel/cadmium cells, **45**, 247
test summary for advanced hydrogen cycle nickel/cadmium cell, **21**, 339
void volume consideration in evaluating the capacity of nickel/cadmium cells with sintered electrodes, **25**, 159
voltage–temperature charge verification testing of 34 ampere hour nickel/cad-

mium cells, **18**, 197
Nickel composite electrodes
a lightweight nickel composite electrode. I. concept and feasibility, **12**, 249
Nickel electrodes
advances in lightweight nickel electrode technology, **29**, 521
the application of electrochemical impedance spectroscopy for characterizing the degradation of $Ni(OH)_2$/NiOOH electrodes, **29**, 477
development of a nickel electrode having stable performance at various charge and discharge rates over a wide temeprature range, **12**, 219
the effects of platinum on nickel electrodes in the nickel/hydrogen cell, **36**, 253
an estimation of the mechanical stress in nickel electrode sinter and its implications for nickel electrode construction, **12**, 267
high surface area, low-weight composite nickel fiber electrodes, **47**, 251
impedances of nickel electrodes cycled in various KOH concentrations, **36**, 285
the internal resistance of plastic-bonded (pressed type) high rate Ni electrodes, **8**, 61
a lightweight nickel composite electrode. II. Elecrochemical impregnation, **16**, 131
lightweight nickel electrodes for nickel/hydrogen cells, **45**, 195
microstructure of plastic-bonded nickel electrodes, **8**, 55
past developments and the future of nickel electrode cell technology, **12**, 177
polypropylene fibre mateiral as a carrier for nickel electrodes, **50**, 21
Raman spectral observation of a 'new phase' observed in nickel electrodes cycled to failure, **36**, 279
real time charge efficiency monitoring for nickel electrodes in nickel/cadmium and nickel/hydrogen cells, **21**, 327
structural comparison of nickel electrodes and precursor phases, **29**, 453
structural models for nickel active mass, **22**, 351
surface modification of nickel electrodes for molten carbonate fuel cells, **24**, 207
technological implications in studies of nickel electrode performance and degradation, **12**, 233
testing the mechanical characteristics of sintered nickel battery plaque and their relationship to nickel electrode performance, **6**, 171
Nickel electrode sinter
an estimation of the mechanical stress in nickel electrode sinter and its implications for nickel electrode construction, **12**, 267
Nickel/hydrogen battery(ies)
alloys for hydrogen storage in nickel/hydrogen and nickel/metal hydride batteries, **47**, 261
characterization testing of a 40 ampere hour bipolar nickel–hydrogen battery, **29**, 341
common pressure vessel Ni/H_2 battery — a demonstration of feasibility, **12**, 335
cost reductions in the nickel/hydrogen battery, **22**, 229
impact of Shuttle environment on prelaunch handling of nickel/hydrogen batteries, **18**, 275
lightweight, direct-radiating nickel/hydrogen batteries, **18**, 245
multiple cell common pressure vessel nickel–hydrogen battery, **36**, 375
parametric tests of a 40 A h bipolar nickel/hydrogen battery, **18**, 283
Nickel/hydrogen battery technology
investigation of nickel/hydrogen battery technology for the RADARSAT spacecraft, **18**, 259
Nickel/hydrogen cells
effect of charge rate on instantaneous charge efficiency of nickel/hydrogen cells, **37**, 419
effect of geosynchronous altitude radiation on performance of Ni/H_2 cells, **12**, 323
effect of overcharge on capacity below 1 V of nickel/hydrogen cells, **21**, 45
effect of precharge on nickel/hydrogen cell storage capacity, **27**, 69
effects of charged open-stand in nickel/hydrogen cells, **50**, 383

the effects of platinum on nickel electrodes in the nickel/hydrogen cell, **36**, 253
failure analysis of 3.5 inch, 50 ampere hour nickel/hydrogen cell, **21**, 275
impedance studies of nickel/cadmium and nickel/hydrogen cells using the cell case as a reference electrode, **29**, 467
4.5 inch diameter IPV nickel/hydrogen cell development program, **18**, 279
KOH concentration effect on the cycle life of nickel/hydrogen cells. III. Cycle life test, **22**, 213
KOH concentration effect on the cycle life of nickel-hydrogen cells. IV. Results of failure analyses, **29**, 503
lightweight nickel electrodes for nickel/hydrogen cells, **45**, 195
long-term storage of nickel/hydrogen cells, **22**, 221
migration of cobalt in nickel oxide/hydroxide active material of a nickel electrode in a Ni/H_2 cell, **50**, 57
multi-mission nickel/hydrogen battery cell for the 1990s, **29**, 533
performance of a duel anode nickel–hydrogen battery, **36**, 363
physical and chemical analysis of a Ni/H_2 cell, **36**, 269
real time charge efficiency monitoring for nickel electrodes in nickel/cadmium and nickel/hydrogen cells, **21**, 327

Nickel/hydrogen technology
advances in nickel/hydrogen technology, **21**, 267
NASA Lewis advanced individual pressure vessel (IPV) nickel/hydrogen technology, **47**, 233
recent advances in nickel/hydrogen technology at NASA Lewis Research Center, **18**, 235

Nickel/hydrogen test program
nickel/hydrogen low-earth-orbit test program, **18**, 265

Nickel hydroxide
characterization of a turbostratic α-nickel hydroxide quantitatively obtained from an $NiSO_4$ solution, **35**, 279
infrared characterization of turbostatic α- and well crystallized α^*-cobalted nickel hydroxides, **36**, 113
preparation and characterization of cobalt-substituted α-nickel hydroxides stable in KOH medium. Part I. α'-Hydroxide with an ordered packing, **35**, 249
preparation and characterization of cobalt-substituted α-nickel hydroxides stable in KOH medium. Part II. α-Hydroxide with a turbostratic structure, **35**, 263
review of the structure and the electrochemistry of nickel hydroxides and oxyhydroxides, **8**, 229

Nickel hydroxide electrodes
a discussion of the causes of blistering of sintered nickel hydroxide electrodes, **6**, 327
electrochemical behaviour of α-cobalted nickel hydroxide electrodes, **36**, 497
experimental device for investigations of the formation process of the $Ni(OH)_2$/NiOOH electrode. Part II., **36**, 167
influence of Fe(III) ions on the nickel hydroxide electrode during long-term cycling, **21**, 77
on the need for a rational nomenclature for the nickel hydroxide electrode, **45**, 263
new apparatus for the measurement of the self-discharge of the nickel hydroxide electrode, **34**, 331
some aspects of the a.c. impedance behaviour of nickel hydroxide and nickel/cobalt hydroxide electrodes in alkaline solution, **27**, 15
some effects of cobalt hydroxide upon the electrochemical behaviour of nickel hydroxide electrodes, **25**, 89
structural and electrochemical characteristics of plastic (PTFE) bonded nickel hydroxide electrodes, **12**, 195
studies concerning charged nickel hydroxide elctrodes. Part V. Voltammetric behaviour of electrodes containing β-$Ni(OH)_2$, **9**, 185
voltammetric discharge efficiency of nickel hydroxide electrodes chemically precipitated on a platinum substrate, **25**, 75

Nickel/iron battery(ies)
a new generation of nickel/iron batteries, **11**, 77
the nickel/iron battery, **35**, 21

progress in US Government sponsored battery development (1978–1979); nickel/iron batteries, **5**, 323
Nickel/iron cells
assessment of performance characteristics of the nickel/iron cell, **27**, 311
developmental studies on porous iron electrodes for the nickel/iron cell, **32**, 341
role of activation on the performance of the iron negative electrode in nickel/iron cells, **39**, 113
Nickel–iron hydroxides
structure and properties of precipitated nickel–iron hydroxides, **45**, 281
Nickel/metal hydride battery(ies)
alloys for hydrogen storage in nickel/hydrogen and nickel/metal hydride batteries, **47**, 261
Nickel/metal hydride cells
impedance measurements on a spiral-wound nickel/metal hydride cell cycled in a simulated low earth orbit, **47**, 277
Nickel oxide
characterization of nickel oxide in molten carbonate. I. Electrochemical behaviour of higher nickel oxide in molten carbonate, **32**, 125
characterization of nickel oxide in molten carbonate. II. *In situ* X-ray diffraction of higher nickel oxide in molten carbonate, **32**, 135
Nickel oxide cathodes
technological status of nickel oxide cathodes in molten carbonate fuel cells, **24**, 1
Nickel oxide electrodes
double-layer impedance of a nickel oxide electrode at low states-of-charge, **47**, 27
effect of zinc and iron ions of the electrochemistry of nickel oxide electrode: slow cyclic voltammetry, **47**, 79
ESCA investigations on plastic-bonded nickel oxide electrodes, **13**, 123
the influence of material dispersion on the redox behaviour of nickel oxide electrodes, **12**, 203
performance characteristics of electrochemically impregnated nickel oxide electrodes for alkaline batteries, **28**, 409
plastic-bonded electrodes for nickel/cadmium accumulators. II. Basic electrochemical parameters of the nickel oxide electrode, **4**, 239
plastic-bonded electrodes for nickel/cadmium accumulators. V. Influence of the current collector and mechanical compression on the current carrying capability of the nickel oxide electrode, **6**, 161
plastic-bonded electrodes for nickel/cadmium accumulators. X. The nature of the second discharge step of nickel oxide elecrodes, **8**, 351
pulse power tests on nickel oxide electrodes for nickel/zinc eletric vehicle batteries, **21**, 33
temperature dependence of hydrogen evolution reaction on nickel oxide electrode in sealed nickel/cadmium cells, **45**, 247
Nickel oxyhydroxide
review of the structure and the electrochemistry of nickel hydroxides and oxyhydroxides, **8**, 229
Nickel/tin cells
alkaline nickel/tin cell system, **34**, 65
Nickel/zinc battery(ies)
progress in US Government sponsored battery development (1978–1979); nickel/zinc batteries, **5**, 327
pulse power tests on nickel oxide electrodes for nickel/zinc eletric vehicle batteries, **21**, 33
Nickel/zinc cells
development of Ni/Zn cells, **34**, 243
further work on additives in the zinc plates of nickel/zinc test cells, **11**, 7
long life sealed nickel/zinc cell using a new separator, **9**, 147
sealed nicek/zinc cells, **37**, 297
Nicotinamide
the effect of nicotinamide on the charge/discharge behavior of PbO_2 electrode in sulfuric acid solution, **39**, 43
Niobium
electrical conductivity of a new solid electrolyte glass material Li_2O–$LiNbO_3$–B_2O_3, **13**, 151
electrochemical and structural characteristics of niobium(V) oxide in a rechargeable lithium battery, **20**, 193

electrochemistry of L-niobium pentoxide in a lithium/non-aqueous cell, **19**, 287
ion solvation in lithium battery electrolyte solutions. Part II. Solvent effects on lithium-ion intercalationin niobium triselenide, **36**, 17
niobium triselenide: a unique rechargeable positive electrode material, **26**, 65
Nitromethane
conductivity of $LiAlCl_4$ solutions in nitromethane containing SO_2, **12**, 31
Nitrotoluene
para-Nitrotoluene as a depolarized for magnesium batteries, **39**, 121
NMR spectroscopy
NMR spectra of H-species in $SOCl_2$ electrolytes (extended abstract), **26**, 415
Raman and ^7Li NMR spectroscopic studies of Li/SO_2 rechargeable cells, **35**, 143
Noble metal
anodic oxidation of ethylene glycol with noble metal alloy catalysts, **1**, 249
Non-aqueous electrolytes
anodic dissolution of aluminium in non-aqueous electrolytes, **42**, 377
optimization of composition of solid-phase cathodes for lithium systems with nonaqueous electrolyte, **45**, 21
polycarbofluorides for lithium sources of current with nonaqueous electrolyte, **45**, 25
Non-aqueous/lithium battery(ies)
preparation of iron sulfides and the study of their electrochemical characteristics for use in a nonaqueous-lithium battery, **5**, 89
Non-destructive technique
determination of impedance parameters of individual electrodes and internal resistance of batteries by a new non-destructive technique. 2. Theoretical approach, **50**, 33

Ohmic drop
techniques for the determination of ohmic drop in half-cells and full cells: a review, **2**, 121
Operating characteristics
pelletized lithium/metal sulfide cells. Part II. Some operating characteristics of pelletized LiAl–FeS cells, **8**, 341
Operating costs
accelerated cycle life testing of lead/acid golf car batteries and the influence of separator type on battery life, energy consumption and operating cost, **10**, 137
Optimum performance
analyzing cell designs by computer for optimum performance. A technical note, **4**, 321
Orbital programs
a view from the AIAA. Introduction of new energy storage technology into orbital programs, **22**, 205
Orbiting profiles
earth radiation budget satellite (ERBS) orbiting profiles and Ni/Cd use, **21**, 291
Order–disorder
no. 2. Hydrogen and order–disorder in PbO_2 in lead/acid positive plates, **25**, 313
Ordered packing
preparation and characterization of cobalt-substituted α-nickel hydroxides stable in KOH medium. Part I. α'-Hydroxide with an ordered packing, **35**, 249
Organic acid complexes
synthesis of $LiCoO_2$ from cobalt–organic acid complexes and its electrode behaviour in a lithium secondary battery, **40**, 347
Organic compounds
the discharge and charge characteristics of FeOCl modified by an organic compound, **26**, 467
Organic electrolytes
the conductance behaviour of mixed organic electrolytes for a non-aqueous Li/MnO_2 battery, **34**, 189
copper oxide cathodes for lithium organic electrolyte batteries, **16**, 309
corrosion protection of secondary lithium electrodes in organic electrolytes, **20**, 253
cycling of β-LiAl in organic electrolytes — effect of electrode contaminations and electrolyte additives, **14**, 193
cycling behaviour of molybdenum dichalcogenides in aprotic organic electrolyte solution, **14**, 223

the discharge reaction mechanism of the MoO_3 electrode in organic electrolytes, **1**, 267
effect of cycling on the lithium/electrolyte interface in organic electrolytes, **43**, 21
electrochemical behaviour of lead oxides in aprotic organic electrolyte solution, **21**, 105
electrochemical characteristics of polyacetylene in organic electrolytes, **14**, 31
organic electrolyte solutions for rechargeable lithium batteries, **20**, 273
the reactivity of organic electrolytes with lithium: mechanistic aspects, **9**, 247
stability of lithiated carbon electrodes in organic electrolytes, **44**, 409
study by electrode impedance spectroscopy of the properties of lithium surface layers in aprotic organic electrolytes (extended abstract), **26**, 571
on the use of rocking chair configurations for cyclable lithium organic electrolyte batteries, **8**, 289

Organic expander action
fundamentals of lead/acid cells. XVII. Negative organic expander action at low temperatures, **8**, 197

Organic expanders
mechanisms by which organic expanders improve the performance of lead/acid batteries, **28**, 149
role of the organic expander in modern lead/acid batteries, **23**, 119

Organic lithium cells
on the possibility of using silver salts other than Ag_2CrO_4 in organic lithium cells, **3**, 347

Organic solutions
behavior of lithium/electrolyte interface in organic solutions, **43**, 1
behaviour of polyaniline electrodes in aqueous and organic solutions, **24**, 185

Organic solvent battery(ies)
lithium/copper molybdate and lithium/copper tungstate organic solvent batteries, **2**, 265

Organic solvents
characteristics of amorphous chromium oxide as a cathode for lithium organic solvent cells, **14**, 215
investigation of lithium intercalation materials with organic solvents and molten salts as electrolytes at temperatures between 60 and 175 °C, **20**, 221

Organomatellic compounds
organometallic compounds in lithium anode power sources, **35**, 291

Otto engines
efficiencies of heat engines and fuel cells: the methanol fuel cell as a competitor to Otto and Diesel engines, **7**, 215

Output power
the theory of stabilization of the output power of a rechargeable fuel cell battery under conditions of significant concentration polarization, **4**, 145

Overcharge
effect of overcharge on capacity below 1 V of nickel/hydrogen cells, **21**, 45
overcharge protection of MnO_2 cathodes, **36**, 45

Oxidation
anodic oxidation of lead in sulfuric acid solutions. The effect of different perchlorate salts on Planté formation, **32**, 243
comments on sample treatments in the X-ray diffraction analysis of the oxidation products of lead, **32**, 71
mechanism of oxidation of free lead in lead accumulator paste by curing, **17**, 331
oxidation mechanisms of lead sulfure in sulfuric acid – overview, **30**, 55
the oxidation of porous lead electrodes in sulfuric acid solutions, **4**, 21
processes at the micro-level in the oxidation of $PbSO_4$ to PbO_2 during charging of lead/acid battery positive plates, **30**, 77
a study of the oxidation of $4PbO \cdot PbSO_4$ crystals in cured paste to PbO_2 agglomerates during formation of positive plates for lead/acid batteries, **31**, 243

Oxide ceramics
oxygen transport and exchange in oxide ceramics, **49**, 1

Oxide electrodes
mechanistic studies of oxide electrodes reversibly incorporating Li^+

ions, **9**, 307
Oxide mill
developments to the Chloride Type 8 oxide mill including computerised production control, **28**, 113
Oxide production
innovations and developments in oxide production for lead/acid batteries, **23**, 87
Oxide pyrochlores
effect of counter cations on electrocatalytic activity of oxide pyrochlores towards oxygen reduction/evolution in alkaline medium: an electrochemical and spectroscopic study, **35**, 163
rechargeable iron/air cells employing bifunctional oxygen electrodes of oxide pyrochlores, **35**, 113
Oxidizing centres
nature of the oxidizing centres in transition metal phosphorus trisulfides MPS_3 (Mfle, Ni)), **20**, 205
Oxygen
aluminum/oxygen batteries for space applications, **22**, 261
development and evaluation of platinum–ruthenium bimetal catalyst-based carbon electrodes for hydrogen/oxygen fuel cells in NaOH media, **45**, 139
effect of hydrogen and oxygen on stability of expanders and performance of lead/acid batteries, **46**, 349
electric current from the direct conversion of low molecular weight C **1**, 141
electrochemical measurements and surface studies on acid oxygen carbon electrodes by the use of the ESCA method, **2**, 183
high energy density aluminum/oxygen cell, **47**, 329
high surface area dual function oxygen electrocatalysts for space power applications, **22**, 409
hydrogen-oxygen proton-exchange membrane fuel cells and electrolyzers, **29**, 399
influence of the electrolyte content of oxygen carbon gas-diffusion electrodes on their electrochemical performance in acid solutions, **3**, 245
the lithium/manganese dioxide cell. I. Oxygen and water release during the thermal treatment of MnO_2, **25**, 167
a lithium solid-state cell based on the $Li_{3.75}S_{0.75}P_{0.25}O_4$ electrolyte, **2**, 387
minor elements in lead materials used for lead/acid batteries. 1. Hydrogen- and oxygen-gassing characteristics, **48**, 219
noble metal-free catalysts for the hydrogen/oxygen recombination in sealed lead/acid batteries using immobilized electrolytes, **40**, 175
oxygen ion conductionin pure and yttria-doped barium cerate, **14**, 295
Perovskite-type oxides: oxygen electrocatalysis and bulk structure, **22**, 387
a self-limiting hydrogen/oxygen recombination device, **8**, 211
simplex optimization of carbon electrodes for the hydrogen/oxygen membrane fuel cell, **1**, 323
system mass optimization of hydrogen/oxygen based regenerative fuel cells for geosynchronous space missions, **38**, 303
Oxygen cathodes
an investigation of the oxygen cathode with a silver catalyst polarized in the region of negative potentials, **7**, 105
Oxygen cycle
operation of oxygen cycle during charge and discharge of sealed PbO_2/Pb cells using the separator as electrolyte carrier, **27**, 201
oxygen cycle in sealed lead/acid batteries, **27**, 91
oxygen cycle in sealed rechargeable cells, **31**, 139
Oxygen electrodes
electrocatalysts for oxygen electrodes in fuel cells and water electrolyzers for space applications, **29**, 413
oxide-based bifunctional oxygen electrode for rechargeable metal/air batteries, **25**, 141
oxygen electrodes for rechargeable alkaline fuel cells – II, **29**, 423
oxygen electrodes for rechargeable alkaline fuel cells, **22**, 399
oxygen electrodes for rechargeable alkaline fuel cells. III, **36**, 323
rechargeable iron/air cells employing bifunctional oxygen electrodes of oxide pyrochlores, **35**, 113

the silver catalyst in the hydrophobic oxygen electrode, **2**, 273
Oxygen evolution
effect of antimony on the anodic corrosion of lead and oxygen evolution at the $Pb/PbO_2/H_2O/O_2/H_2SO_4$ electrode system, **23**, 331
oxygen evolution on lead dioxide in sulphuric acid solutions, **31**, 121
Oxygen exchange
oxygen transport and exchange in oxide ceramics, **49**, 1
Oxygen recombination
a review of oxygen recombination in the sealed lead–acid cell, **19**, 261
Oxygen recombination rate
oxygen recombination rate on plastic-bonded cadmium electrodes doped with nickel(II) hydroxide, **19**, 55
plastic-bonded electrodes for nickel/cadmium accumulators. VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, **7**, 113
plastic-bonded electrodes for nickel/cadmium accumulators. VIII. Study of oxygen recombination rate on plastic-bonded cadmium electrodes provided with active carbon catalyst, **8**, 3
plastic-bonded electrodes for nickel/cadmium accumulators. VI. Oxygen recombination rate on sealed cell cadmium electrodes, **7**, 65
Oxygen-reducing electrodes
oxygen-reducing electrodes for acid fuel cells, **15**, 201
Oxygen reduction
carbon-based electrodes carrying platinum-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, **19**, 279
on the catalytic properties of mixed oxides for the electrochemical reduction of oxygen, **32**, 253
cobalt and cobalt-based macrocycle blacks as oxygen-reduction catalysts in alkaline fuel cells, **45**, 219
effect of counter cations on electrocatalytic activity of oxide pyrochlores towards oxygen reduction/evolution in alkaline medium: an electrochemical and spectroscopic study, **35**, 163
effect of some elements on oxygen reduction and hydrogen evolution at lead/acid battery negative plates, **22**, 1
elecrochemical activity of some different iron polyphthalocyanines for the oxygen reduction reaction in acidic medium, **6**, 35
electrocatalysis of the oxygen reduction process on metal chelates in acid electrolyte, **2**, 233
the electrochemical reduction of oxygen on cobalt-cemented tungsten carbide, **9**, 1
electroreduction of oxygen on some novel cobalt phthalocyanine complexes, **28**, 317
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as catalysts for the electrochemical reduction of oxygen in acid electrolytes, **13**, 217
high-performance platinized carbon electrodes for oxygen reduction in power sources with alkaline electrolytes, **13**, 273
influence of carrier material on catalytic activity of double layer diffusion electrodes for reduction of oxygen in acidic electrolytets, **2**, 361
influence of metal ions on the electrocatalytic oxygen reduction of carbon materials prepared from pyrolyzed polyacrylonitrile, **38**, 327
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, **46**, 61
oxygen reduction rate at teflon-bounded cadmium electrodes in sealed nickel/cadmium accumulators, **25**, 1
pyrolyzed macrocycles on high surface area carbons for the reduction of oxygen in alkaline fuel cells, **36**, 547
reduction of oxygen on $LaNiO_3$ in alkaline solution, **10**, 319
study of polymeric iron phthalocyanine as electrocatalyst for reduction of oxygen in acidic electrolytes, **2**, 351
tetrathiafulvalenes as catalysts for the reduction of oxygen in acid electrolytes, **6**, 193
Oxygen transport
oxygen transport and exchange in oxide ceramics, **49**, 1
Oxyhalides

optimized lithium oxyhalide cells, **44**, 715
studies in lithium oxyhalide cells for downhole instrumentation. Use of lithium tetrachlorogallate electrolyte in $Li/SOCl_2$ cells, **45**, 343
Oxyhalide systems
in situ Raman spectra of the discharge products of calcium and lithium-anoded thionyl chloride cells — sulfur dioxide generation in oxyhalide systems, **34**, 1

Palladium
effect of silver, copper and palladium additives on the performance of carbon electrodes in an $Li/SOCl_2$ system, **16**, 233
a novel Pd–Ag membrane anode for alkaline fuel cells suitable for CO_2-containing hydrogen, **45**, 93
Parametric tests
parametric tests of a 40 A h bipolar nickel/hydrogen battery, **18**, 283
Parasitic reactions
parasitic reactions and the balance of materials in lithium batteries for implantable medical devices, **43**, 119
Particle size
theoretical study of a composite electrode using an intercalation compound: influence of the particle size distribution on the depth of discharge, **14**, 209
Passivation
analysis of the conditions that promote passivation on calcium–alloy grids in lead/acid batteries, **36**, 451
an *in situ* of the effect of tin on the passivation of lead–tin alloys, **50**, 141
currentless passivation of the PbO_2 electrode with respect to the influence of tin, **30**, 41
electrochemical study of the passivating layer on lithium intercaleted carbon elctrodes in nonaqueous solvents, **43**, 65
incorporation mechanism for doping of metal ions into a passivating film at the lithium/thionyl chloride interface, **45**, 7
influence of tin on passivation of PbO_2 electrodes, **28**, 367
interfacial phenomena in polymer-electrolyte cells: lithium passivation and cyclability, **43**, 9
ionic transport in passivating layers on the lithium electrode, **44**, 365
passivation of iron in alkaline carbonate solutions, **35**, 131
passivation of the positive electrode of the lead/acid battery: a consequence of self-discharge, **30**, 47
the performance of secondary zinc electrodes in modified alkaline electrolytes. I. Galvanostatic passivation studies in alkaline electrolyte, **39**, 273
Passivation reactions
passivation reactions on the electrodes of a lead/acid cell, **2**, 369
Passivation resistance
reliability of commercial lithium button cells. I. Effect of the environment on the passivation resistance, **25**, 49
reliability of commercial lithium button cells. II. Effect of the state-of-discharge and environment on the passivation resistance, **25**, 61
Pasted plates
curing pasted plates for lead/acid batteries, **19**, 169
Paste mixing
developments in paste mixing for lead/acid batteries, **19**, 163
Pastes
aspects of lead/acid battery technology. I. Pastes and paste mixing, **41**, 107
Pattern recognition
battery lifetime prediction by pattern recognition. Application to lead/acid battery life-cycling test data, **13**, 23
Peak-shaving battery(ies)
multivariate analysis of data from fabrication, testing and operation of a large lead/acid peak-shaving battery, **37**, 379
prediction of individual cell performance in a large lead/acid peak-shaving battery, **45**, 73
Performance
the lithium/sulfur dioxide primary battery — its characteristics, performance and applications, **5**, 35
performance analysis of zinc/bromine batteries in vehicle and utility applications, **5**, 173

performance and reliability of the lithium/iodine battery, **5**, 1
Performance limits
performance limits of primary and secondary batteries, **4**, 215
Performance losses
investigations of the factors causing performance losses of lead/acid traction batteries, **50**, 153
Perovskite
electrolytes for the high temperature fuel cell; experimental and theoretical studies of the perovskite $LaAlO_3$, **3**, 67
Perovskite-type oxide
Perovskite-type oxides: oxygen electrocatalysis and bulk structure, **22**, 387
Phase analysis
PEAKS®: a PC-based method for quantitative X-ray diffraction phase analysis of lead/acid battery materials, **32**, 315
Phase-angle measurements
quality analysis of reserve-type silver oxide/zinc batteries by capacitance and phase-angle measurements, **21**, 165
Phase changes
phase changes and diffusivity in the carbon/lithium electrode, **25**, 151
Phase composition
a study of the phase composition, crystallinity, morphology, porosity and surface area of leady oxides used in lead/acid battery plates, **16**, 141
Phase diagram
multinary alloy electrodes for solid state batteries. I. A phase diagram approach for the selection and storage properties determination of candidate electrode materials, **38**, 351
Phase relations
phase relations and conductivity in the system poly(ethylene oxide)/$LiClO_4$, **26**, 503
Phosphoric acid
behaviour of the $PbO_2/PbSO_4$ electrode with regard to charging regime and small additions of phosphoric acid to the sulfuric acid electrolyte, **30**, 99
effects of phosphoric acid additions on the behaviour of the lead/acid cell, **24**, 171
influence of phosphoric acid on both the electrochemistry and the operating behaviour of the lead/acid system, **33**, 213
kinetics of hydrogen-evolution reaction on lead and lead-alloy electrodes in sulfuric acid electrolyte with phosphoric acid and antimony additives, **48**, 371
Phosphoric acid fuel cells
effect of storage conditions on the performance of phosphoric acid fuel cells, **39**, 239
effect of structure on porous gas-diffusion electrodes for phosphoric acid fuel cells, **50**, 261
Fijui Electric phosphoric acid fuel cell activities, **29**, 109
influence of the operating conditions and of the ageing upon the electrochemical performance of a phosphoric acid fuel cell, **42**, 365
influence of PTFE dispersion in the catalyst layer of porous gas-diffusion electrodes for phosphoric acid fuel cells, **50**, 163
PAFC demonstration plants in Europe: first results, **49**, 63
a perspective on PAFC commercialization by Fuji Electric, **37**, 119
philosophies and experiences of PAFC field trials, **49**, 77
the physical and chemical state of phosphoric acid fuel cell assemblies after long term operation: surface and near-surface analysis, **36**, 137
study of electrolyte management in phosphoric acid fuel cells, **37**, 347
technology development and market introduction of PAFC systems, **29**, 71
Westinghouse air-cooled PAFC technology, **29**, 59
Phosphorus
electrochemical behaviour of amorphous $V_2O_5(-P_2O_5)$ cathodes for lithium secondary batteries, **20**, 173
the $Li/Cu_4O(PO_4)_2$ couple: a new version for long-life low-rate applications, **20**, 111
nature of the oxidizing centres in transition metal phosphorus trisulfides MPS_3 (Mfle, Ni)), **20**, 205
Photoacoustic spectrophotometry
the application of photoacoustic spectrophotometry (PAS) to the study of positive plates in lead/acid

batteries, **19**, 1
Photoanodes
n-$MoSe_2$ grafted with polycarbazole for an extended life of the photoanode, **32**, 1
studies on polycrystalline cadmium sulfide photoanodes, **24**, 329
Photocatalytic behaviour
photocatalytic behaviour of *n*-$MoSe_2$ single crystals in contact with the I^-, I_2 redox couple in solar photoelectrochemical cells, **7**, 275
Photocurrent imaging
a photocurrent imaging study of the distribution of lead monoxide in corrosion layers on lead/acid battery grids, **42**, 119
Photocurrent spectroscopy
photocurrent spectroscopy and its aplciation to the study of the lead/acid system, **40**, 137
Photoelectrochemical cells
photocatalytic behaviour of *n*-$MoSe_2$ single crystals in contact with the I^-, I_2 redox couple in solar photoelectrochemical cells, **7**, 275
Photoelectrochemical current
effect of antimony on the semiconducting properties of the anodic plumbous oxide film formed in sulfuric acid solution. II. Studies of photoelectrochemical current, **39**, 233
Photoelectrochemical solar cells
a cadmium sulfide/solid electrolyte photoelectrochemical solar cell, **24**, 121
Photoelectrochemical studies
photoelectrochemical studies on polycrystalline CdS (chemical bath deposition) and CdSe (chemical bath and electro deposition) thin film electrodes, **13**, 159
Photoelectrochemistry
photoelectrochemical study of screen-printed cadmium sulfide electrodes, **24**, 41
photoelectrochemistry of lithium, **43**, 157
Photoelectron spectroscopy
characterization of $Cu_2V_2O_7$ as cathode material for lithium cells by X-ray and photoelectron spectroscopy, **44**, 589
Photovoltaic applications
EGAT's experience with storage batteries for photovoltaic, **28**, 181
lead/acid batteries for photovoltaic applications. Test results and modelling, **47**, 109
lead/acid batteries for remote photovoltaic applications, **4**, 327
solar grade silicon *versus* electronic grade silicon for photovoltaic applications, **11**, 115
test facility determining the performance of storage batteries for photovoltaic applications, **35**, 411
Photovoltaic battery(ies)
a simple approach to the determination of the charging state of photovoltaic-powered storage batteries, **41**, 65
a study of the low-temperature charge acceptance of 500 A h photovoltaic batteries: laboratory and field tests, **32**, 151
Photovoltaic cells
on electrochemical photovoltaic cells formed with $CuInS_2$ films, **21**, 59
Photovoltaic generator
a photovoltaic generator on Coconut Island, **25**, 243
Photovoltaic modules
a new model for the current–voltage output characteristics of photovoltaic modules, **50**, 11
Photovoltaic power
photovoltaic power for telecommunications, **4**, 337
Photovoltaic power systems
development of lead/acid batteries for photovoltaic power systems, **35**, 355
operation and management of batteries in photovoltaic power systems under development in Japan, **35**, 365
Photovoltaic pumping system
switching mode photovoltaic pumping system, **47**, 35
Photovoltaic refrigerator
comparison of the performance obtained in a tropical country, of a solid absorption, solar-driven refrigerator, and a photovoltaic refrigerator, **15**, 1
Photovoltaic systems
lead/acid batteries in Arctic photovoltaic systems, **31**, 321
lead/acid batteries for solar (photovoltaic) systems, **19**, 211
optimum design of a photovoltaic powered pumping system, **50**, 1

photovoltaic-powered regulated cathodic protection system, **50**, 27
thermal damage in luminescent solar concentrators (LSC) for photovoltaic systems, **6**, 383
Phthalocyanine
kinetic studies of the electrochemical reaction between lithium and phthalocyanine, **14**, 71
kinetic studies of the electrochemical reaction between lithium and phthalocyanine. II. Reduction reaction mechanism, **16**, 45
Physicochemical properties
application of non-aqueous solvents to batteries. Part I. Physicochemical properties of propionitrile/water tow-phase solvent relevant to zinc/bromine batteries, **10**, 309
the lithium/manganese dioxide cell. IV. Relationship between physicochemical properties and electrochemical characteristics of MnO_2 in nonaqueous electrolytes, **35**, 175
studies on the physicochemical properties and performance characteristics of the PbO_2 electrode, **36**, 439
Physicochemistry
physicochemical techniques in the investigation of electrochemical cells, **34**, 175
Pilot cells
measurements with a pilot cell, **17**, 95
Piperazinium diiodides
electrical conductivity of binary cells of type silver iodide–piperazinium and *N*,*N'*-alkyl-piperazinium diiodides, **1**, 359
Planté electrodes
on the cycling of positive Planté electrodes, **9**, 47
Planté formation
anodic oxidation of lead in sulfuric acid solutions. The effect of different perchlorate salts on Planté formation, **32**, 243
Planté formation process
the Planté formation process for lead/acid positive electrodes, **7**, 181
Plasma polymerization
modification of lithium/electrolyte interface by plasma polymerization of 1,-difluoroethene, **44**, 377
Plastic-bonded electrodes
ESCA investigations on plastic-bonded nickel oxide electrodes, **13**, 123
the internal resistance of plastic-bonded (pressed type) high rate Ni electrodes, **8**, 61
limitations in the use of plastic-bonded electrodes in sealed nickel/cadmium cells and their reasons. I. Prismatic and cylindrical cells, **21**, 9
limitations in the use of plastic-bonded electrodes in sealed nickel/cadmium cells and their reasons. II. Button cells, **21**, 67
microstructure of plastic-bonded nickel electrodes, **8**, 55
oxygen recombination rate on plastic-bonded cadmium electrodes doped with nickel(II) hydroxide, **19**, 55
plastic-bonded electrodes for nickel/cadmium accumulators. I. Cadmium electrode, **4**, 227
plastic-bonded electrodes for nickel/cadmium accumulators. II. Basic electrochemical parameters of the nickel oxide electrode, **4**, 239
plastic-bonded electrodes for nickel/cadmium accumulators. III. Influence of active layer composition on galvanostatic and potentiostatic discharge curves, **4**, 349
plastic-bonded electrodes for nickel/cadmium accumulators. IV. Some specific problems of the positive active layer, **5**, 207
plastic-bonded electrodes for nickel/cadmium accumulators. V. Influence of the current collector and mechanical compression on the current carrying capability of the nickel oxide electrode, **6**, 161
plastic-bonded electrodes for nickel/cadmium accumulators. VI. Oxygen recombination rate on sealed cell cadmium electrodes, **7**, 65
plastic-bonded electrodes for nickel/cadmium accumulators. VII. Influence of different metal screens on the oxygen recombination rate on plastic-bonded cadmium electrodes, **7**, 113
plastic-bonded electrodes for nickel/cadmium accumulators. VIII. Study of oxygen recombination rate on plastic-bonded cadmium electrodes provided with active carbon catalyst, **8**, 3

plastic-bonded electrodes for nickel/cadmium accumulators. IX. Oxygen recombination rate on plastic-bonded cadmium electrodes with different active materials, **8**, 273
plastic-bonded electrodes for nickel/cadmium accumulators. X. The nature of the second discharge step of nickel oxide elecrodes, **8**, 351
preparation and performance of plastic-bonded-carbon bromine electrodes, **19**, 337
structural and electrochemical characteristics of plastic (PTFE) bonded nickel hydroxide electrodes, **12**, 195
Plastic components
recycling the plastic components in today's lead/acid battery, **42**, 315
Plate-stacking process
automation and rationalization of the plate-stacking process for automotive, traction and stationary lead/acid batteries, **31**, 355
Platinum
carbon-based electrodes carrying platinum-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, **19**, 279
development and evaluation of platinum–ruthenium bimetal catalyst-based carbon electrodes for hydrogen/oxygen fuel cells in NaOH media, **45**, 139
the effects of platinum on nickel electrodes in the nickel/hydrogen cell, **36**, 253
studies of electrochemical oxidation of methanol on platinum in phosphoric acid solution, **36**, 11
voltammetric discharge efficiency of nickel hydroxide electrodes chemically precipitated on a platinum substrate, **25**, 75
Platinum electrodes
advances in solid polymer electrolyte fuel cell technology with low platinum loading electrodes, **22**, 359
the methanol/air fuel cell: a selective review of methanol oxidation mechanisms at platinum electrodes in acid electrolytes, **4**, 191
recent advances in solid polymer electrolyte fuel cell technology with low platinum loading electrodes, **29**, 367
Platinum–tin electrodes
methanol oxidation on carbon-supported platinum–tin electrodes in sulfuric acid, **50**, 295
Poisoning
antimony poisoning in lead–acid batteries, **19**, 301
Polarization
a comparative study of the effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, **13**, 297
the electrochemistry of porous zinc. II. The polarisation behaviour of plain and polymer-bonded microelectrodes in KOH solutions, **15**, 245
mathematical models for anodic polarization of the lead/acid positive electrode, **30**, 237
polarization behavior of lithium electrode in polymeric solid electrolytes, **44**, 439
polarization of the lithium electrode in sulfuryl chloride solutions, **9**, 289
studies on the Fe^{2+}/Fe^{3+} redox system using d.c. linear polarisation and impedance techniques, **19**, 269
Polyacetylene
electrochemical characteristics of polyacetylene in organic electrolytes, **14**, 31
Polyacetylene cathodes
anion behaviour in a polyacetylene cathode for a secondary lithium battery, **20**, 231
the diffusion of various anions in a polyacetylene cathode of a secondary lithium battery, **25**, 277
Polyacetylene electrodes
polyacetylene electrodes for non-aqueous lithium batteries, **14**, 3
Polyacrylamide
high gelled-electrolyte quality with polyacrylamide polymer: limitation of cycle-life through water loss, **33**, 127
Polyacrylonitrile
comparison of the physical, chemical and electrochemical properties of rayon- and polyacrylonitrile-based graphite felt electrodes, **45**, 29
impedance study for the interface and whole battery with PAN-based poly-

mer electrolyte, **44**, 431
influence of metal ions on the electrocatalytic oxygen reduction of carbon materials prepared from pyrolyzed polyacrylonitrile, **38**, 327
performance of polyacrylonitrile-based cathodes in lithium/iodine solid state batteries, **19**, 37
Polyaniline
an all-solid-state lithium/polyaniline rechargeable cell, **39**, 255
behaviour of polyaniline electrodes in aqueous and organic solutions, **24**, 185
development of cylindrical secondary lithium/polyaniline batteries, **44**, 669
fibrous polyaniline as positive active material in lithium secondary batteries, **20**, 249
impedance study of the interfaces between lithium, polyaniline, lithium-doped MnO_2 and modified poly(ethylene oxide) electrolyte, **43**, 83
large-scale polyaniline batteries, **24**, 115
performance of polyaniline positive in a lithium battery, **34**, 141
poly(aniline)-coated electrodes for gas recombination in lead/acid batteries, **31**, 89
the polyaniline/lithium battery, **20**, 243
polyaniline used as a positive in solid-state lithium battery, **44**, 499
a rechargeable $Zn/ZnCl_2$, NH_4Cl/polyaniline/carbon dry battery, **45**, 153
a wound-type lithium/polyaniline secondary cell, **39**, 259
Polybenzene
polybenzene as a positive electrode in aqueous secondary battteries, **16**, 179
Polycarbazole
n-$MoSe_2$ grafted with polycarbazole for an extended life of the photoanode, **32**, 1
Polycarbofluorides
polycarbofluorides for lithium sources of current with nonaqueous electrolyte, **45**, 25
Polyether
cationic transport numbers in polyether-based networks containing lithium salts, **14**, 27
mechanism of ionic conduction in polyether–polyurethane networks containing lithium perchlorate, **20**, 339
Polyethylene
microporous polyethylene separators — today and tomorrow. Separator development trends for modern automotive batteries, **42**, 211
recent advances in polyethylene separator technology, **34**, 257
superiority and failure mode of automotive batteries insulated with polyethylene separators, **48**, 129
Polyethylene oxide
block copolymers of poly(ethylene oxide) materials for polymer electrolytes (transport properties), **44**, 467
cycling behaviour of the polypyrrole-polyethylene oxide composite electrode, **21**, 17
an electrochemical study of PEO:$LiBF_4$-glass composite electrolytes, **47**, 63
electrode kinetics in poly(ethylene oxide)-based electrolytes, **20**, 333
impedance study of the interfaces between lithium, polyaniline, lithium-doped MnO_2 and modified poly(ethylene oxide) electrolyte, **43**, 83
phase relations and conductivity in the system poly(ethylene oxide)/$LiClO_4$, **26**, 503
poly(ethylene oxide) electrolytes for operation at near room temperature, **14**, 13
Polymer-bonded microelectrodes
the electrochemistry of porous zinc. II. The polarisation behaviour of plain and polymer-bonded microelectrodes in KOH solutions, **15**, 245
Polymer-bonded porous electrodes
the electrochemistry of porous zinc. IV. The Faradaic impedance of plain and polymer-bonded porous electrodes in KOH solutions, **15**, 61
the electrochemistry of porous zinc. V. The cycling behaviour of plain and polymer-bonded porous electrodes in KOH solutions, **15**, 261
Polymer cathodes
new electrolytes and polymer cathode materials for lithium batteries, **45**, 1
Polymer electrodes
kinetics of semiconducting polymer electrodes in lithium cells, **19**, 27
Polymer electrolyte batteries

behavior of polymer electrolyte batteries at 80–100 °C and near room temperature, **14**, 23
Polymer electrolytes
a.c. impedance studies of the lithium/polymer electrolyte interface in solid-state lithium cells, **24**, 157
advances in solid polymer electrolyte fuel cell technology with low platinum loading electrodes, **22**, 359
ambient temperature rechargeable polymer electrolyte batteries, **43**, 195
application of solid-polymer electrolyte in lithium batteries: ultra-thin film battery, **43**, 89
block copolymers of poly(ethylene oxide) materials for polymer electrolytes (transport properties), **44**, 467
diffusional limitations at the lithium polymer electrolyte interface, **39**, 215
effect of non-stroichiometry on the electrode properties of zirconium diselenide in lithium/polymer electrolyte batteries (extended abstract), **26**, 273
electrochemical characterization of new conducting polymer electrolytes, **45**, 161
electrode processes at the lithium/polymer elecrolyte interface, **18**, 75
enhancement of the ionic conductivity and the amorphous state of solid polymer electrolytes for rechargeable lithium batteries, **44**, 473
factors affecting the conductivity of divalent polymeric electrolytes, **32**, 107
a high-temperature lithium/copper oxide cell with a solid polymer electrolyte, **35**, 235
high gelled-electrolyte quality with polyacrylamide polymer: limitation of cycle-life through water loss, **33**, 127
impedance study for the interface and whole battery with PAN-based polymer electrolyte, **44**, 431
interfacial phenomena in polymer-electrolyte cells: lithium passivation and cyclability, **43**, 9
the Li/LiV_3O_8 polymer electrolyte lithium battery. III. Investigations of the electrode interfaces, **24**, 287
the lithium polymer electrolyte battery. IV. Use of composite electrolytes, **32**, 381
the lithium polymer electrolyte battery. V. The roles of the composition and morphology of the positive electrode, **32**, 389
the lithium polymer electrolyte battery. VI. Design and characterization of prototypes, **37**, 369
new solid-state electric double-layer capacitor using poly(vinyl alcohol)-based polymer solid electrolyte, **36**, 87
non-equilibrium thermodynamics of transport and reaction in lithium cells with liquid or polymeric electrolytes: application to impedance analysis, **26**, 491
performance of lithium/manganese oxide spinel electrodes in a lithium polymer electrolyte cell, **34**, 39
polarization behavior of lithium electrode in polymeric solid electrolytes, **44**, 439
polymer electrolyte coatings for lithium anodes in $SOCl_2$ cells, **44**, 385
polymer electrolytes, **26**, 23
preparation and characterization of a thin film of polymer electrolyte by plasma CVD. Part IV. All-solid-state lithium batteries, **26**, 457
rechargeability and rate capability of polymer electrolyte batteries at room temperature, **32**, 175
rechargeable $Li/LiMn_2O_4$ batteries with a polymeric solid electrolyte, **41**, 315
a sol-gel route to composite positive electrodes for lithium cells with polymer electrolytes, **28**, 397
structure–conductivity relationship in polymer electrolytes formed by network polymers from poly[dimethylsiloxane-g-poly(ethylene oxide)] and lithium perchlorate, **20**, 327
two-and three-electrode studies of cycling in experimental polymer electrolyte cells, **44**, 461
utilization of methanol for polymer electrolyte fuel cells in mobile systems, **49**, 299
vanadium and titanium oxides prepared by hydrolysis of alkoxides as insertion electrodes in lithium cells with polymeric electrolytes, **32**, 81
Polymeric single-ion conductor

rechargeable lithium batteries with a polymeric single-ion conductor, **50**, 369
Polymer networks
new conducting polymer networks, **44**, 445
Poly(3-methylthiophene)
electrochemical studies of P3-MT electrodes in $LiAlCl_4$–SO_2 electrolyte (extended abstract), **26**, 553
lithium rechargeable cell with a poly 3-methylthiophene cathode and $LiAsF_6$–dimethyl carbonate electrolyte, **36**, 561
pulse power characteristics of poly(3-methylthiophene) cathodes in $Li(SO_2)_3AlCl_4$ electrolyte, **36**, 175
Polypropylene
design, development, performance, and reconditioning of Ni/Cd batteries using polypropylene separators, **12**, 305
polypropylene fibre mateiral as a carrier for nickel electrodes, **50**, 21
Polypropylene membranes
metallized microporous polypropylene membranes as a support for thin-film electrodes, **44**, 493
Polypyrrole
application of chemical synthesized polypyrrole for a rechargeable lithium battery, **27**, 59
application of electrochemcially formed polypyrrole in lithium secondary batteries: analysis of anion diffusion process, **20**, 237
cycling behaviour of the polypyrrole-polyethylene oxide composite electrode, **21**, 17
improvement of heavy-drain discharge properties of polypyrrole cathode by the electro-codepositionof carbon powder, **44**, 611
a new electrode for a poly(pyrrole)-based rechargeable battery, **40**, 299
Polysiloxane
single- and double-ion type cross-linked polysiloxane solid electrolytes for lithium cells, **41**, 291
Polysulfides
the electrochemical behavior of polysulfides in tetrahydrofuran, **14**, 129
Polythiophene
behaviour of iron polythiophene positive electrodes in lithium cells, **36**, 557
Polyurethane
mechanism of ionic conduction in polyether–polyurethane networks containing lithium perchlorate, **20**, 339
Polyvinyl alcohol
the behaviour of polyvinyl alcohol at the planar $Cd/Cd(OH)_2$ electrode interface, **23**, 341
multilayer thin-film batteries with poly(vinyl alcohol), **48**, 285
new solid-state electric double-layer capacitor using poly(vinyl alcohol)-based polymer solid electrolyte, **36**, 87
Polyvinyl chloride
behaviour of polymer (poly(vinyl chloride)) membrane systems, **9**, 137
Poly(2-vinylpyridine)
studies on the electrical properties of $P2VP \cdot nI_2$ complexes, **26**, 557
Pore size
relationship of cathode pore size distribution and rated capacity in Li/MnO_2 cells, **44**, 709
Pore structure
influence of the active surface and pore structure on the electrochemical properties of porous electrodes, **9**, 73
Porosimetry
the method of standard porosimetry. 1. Principles and possibilities, **48**, 327
the method of standard porosimetry. 2. Investigation of the formation of porous structures, **48**, 339
Porosity
a study of the phase composition, crystallinity, morphology, porosity and surface area of leady oxides used in lead/acid battery plates, **16**, 141
Porous electrodes
influence of the active surface and pore structure on the electrochemical properties of porous electrodes, **9**, 73
investigations of the negative plate of lead/acid cells. 3. Model calculations of the impedance of self-similar porous electrodes, **50**, 89
Porous structures
the method of standard porosimetry. 2. Investigation of the formation of porous structures, **48**, 339
Portable underground lighting
sealed lead/acid batteries for portable underground lighting, **28**, 207
Positive electrodes

optimisation of active material for positive electrodes of Ni/Cd accumulators, **8**, 9
polybenzene as a positive electrode in aqueous secondary battteries, **16**, 179
Positive grids
an examination of corroded positive grids from a lead/acid battery, **17**, 369
Positive materials
silver selenate and silver tellurate as positive materials for lithium primary power sources, **3**, 257
Positive-plate processing
qualification testing of General Electric 50 A h nickel/cadmium cells with new separator and new positive-plate processing, **18**, 135
Positive plates
the application of photoacoustic spectrophotometry (PAS) to the study of positive plates in lead/acid batteries, **19**, 1
crystalline phase composition of positive plates in lead/acid traction batteries under simulated electric vehicle service, **8**, 175
effect of chemisorbed water on the electrical capacity of the lead/acid battery positive plate, **19**, 15
Post-test analyses
in-test and post-test analyses of sodium/sulfur cells, **17**, 228
post-test analyses of sodium/sulfur cells and aqueous batteries, **17**, 221
Potassium
determination of the dissociation constant of molten $Li_2CO_3/Na_2CO_3/K_2CO_3$ using a stabilized zirconia oxide-ion indicator, **16**, 75
dissolution behaviour of copper and nickel oxides in molten $Li_2CO_3/Na_2CO_3/K_2CO_3$, **23**, 357
electrical conductivity of KCu_4I_5, **1**, 103
a lithium solid-state cell based on the $Li_{3.75}S_{0.75}P_{0.25}O_4$ electrolyte, **2**, 387
potassium vanadates — promising materials for secondary lithium batteries, **44**, 561
reversible potassium vanadium bronze cathodes ($K_xV_6O_{13+y}$) with various potassium to vanadium ratios, **44**, 603
a room temperature β-alumina primary cell employing sodium–potassium alloy as anodic reactant, **3**, 191
some aspects of lithium/copper compound cells in LiCl–KCl eutectic, **1**, 237
Potassium polysulfide melts
secondary lithium cell based on $Li_x-Cr_{1-y}C_yS_2$ obtained in potassium polysulphide melts, **34**, 119
Potential–recovery transients
open-circuit potential-recovery transients of alkaline porous iron electrodes, **21**, 53
Potential–time transient
open-circuit potentizl–time transient of the magnesium anode, **12**, 39
Potential profile
non-linear simulation of current distribution and potential profile in porous manganese dioxide electrodes during discharge, **6**, 25
Power control
lead/acid batteries in utility energy storage and power control application, **35**, 395
Power converters
compatible power converters for lithium battery systems (extended abstract), **26**, 607
Power discharge tester
multiple constant power discharge tester, **17**, 210
Power generating technologies
competing power generating technologies for the 21st century, **49**, 185
Power losses
power losses in batteries with a common electrolytic path, **25**, 215
Power sources
a brief review of progress in electrochemical power sources, **11**, 111
electrochemical reactions in power sources and sinks: personal reflections on progress and future prospects, **11**, 171
high-performance platinized carbon electrodes for oxygen reduction in power sources with alkaline electrolytes, **13**, 273
a little retrospection, **11**, 107
NERDDC workshop on power sources for electric vehicles, **7**, 311

position and development of electrochemical power sources, **11**, 185
power for the future, **11**, 63
progress and future efforts in solving major problems of electrochemical power sources, **11**, 163
Power sources development
how to program success in power sources development, **11**, 11
Power stations
portable power stations, **48**, 247
Power supplies
battery requirements for uninterruptible power-supply applications, **23**, 211
Power supply systems
advanced lead/acid batteries for stand-alone power-supply systems, **31**, 329
Power systems
status of the Space Station power system, **22**, 195
Precharge
effect of precharge on nickel/hydrogen cell storage capacity, **27**, 69
Premature capacity loss (PCL)
premature capacity loss (PCL) of the positive lead/acid battery plate: a new concept to describe the phenomenon, **42**, 345
Pressure
influence of fine materials on thickness and conductivity of manganese dioxide powder under pressure — a technical note, **4**, 281
Pressure vessel
common pressure vessel Ni/H_2 battery — a demonstration of feasibility, **12**, 335
Primary battery(ies)
advances in primary lithium liquid cathod batteries, **26**, 51
the delayed action of magnesium anodes in primary batteries. Part I. Experimental studies, **10**, 219
the delayed action of magnesium anodes in primary batteries. Part II. Theoretical studies, **10**, 243
liquid cathode primary batteries, **14**, 111
performance limits of primary and secondary batteries, **4**, 215
safety and reliability studies of primary lithium batteries, **43**, 247
Primary cells
computer simulation of thermal modelling of primary lithium cells, **21**, 183
performance characteristics of magnesium/*N*, *N'*-dichlorodimethylhydantoin primary cell, **34**, 303
safety aspects in primary high-rate lithium cells, **43**, 259
Production control
investigation and production control of Li/SO_2 cells by the galvanostatic pulse method, **8**, 395
Production costs
production cost estimation of solid oxide fuel cells, **49**, 315
Propionitrile
application of non-aqueous solvents to batteries. Part I. Physicochemical properties of propionitrile/water tow-phase solvent relevant to zinc/bromine batteries, **10**, 309
performance of zinc/bromine cells having a propionitrile electrolyte, **23**, 365
Propulsion
marine and naval applications of fuel cells for propulsion: the process selection, **29**, 169
Propylene carbonate
additive effects of Li^+ ion solvation compounds on $LiClO_4$–propylene carbonate electrolytic properties, **12**, 53
anodic stability of propylene carbonate on manganese dioxide electrodes, **44**, 341
the cycling behaviour and stability of the lithium electrode in propylene carbonate and acetonitrile electrolytes, **10**, 1
dialkoxyethane–propylene carbonate mixed electrolytes for lithium secondary batteries, **13**, 261
discharge characteristics and interface impedance of an Li/1 M $LiClO_4$(PC)/V_2O_5, **16**, 97
galvanostatic cycling of lithium/titanium disulfide cells in propylene carbonate and propylene carbonate–acetonitrile electrolytes, **10**, 23
inhomogeneous electrochemical lithiation of V_2O_5–TeO_2 binary glasses in a propylene carbonate solution, **44**, 645
ionic association of lithium salts in propylene carbonate/1,2-dimethoxyethane mixed systems for lithium batteries, **45**, 229

$LiAsF_6$ is propylene carbonate–acetonitrile for primary lithium batteries, **10**, 13
the secondary lithium/aluminium electrode at room temperature. I. cycling in $LiClO_4$–propylene carbonate solutions, **12**, 145
study of a lithium/lithium propionate electrode in propylene carbonate, **10**, 111
Proton-conducting electrolyte
performance of a solid-state battery with a proton-conducting electrolyte, **46**, 65
Proton conductive solid elecrolytes
high temperature fuel and steam electrolysis cells using proton conductive solid electrolytes, **7**, 293
Proton conductor
battery and other applications of a new proton conductir: hydrogen uranyl phosphate tetrahydrate, $HUO_2PO_4 \cdot {}^4H_2O$, **3**, 105
Proton exchange membrane fuel cells
the application of Dow Chemical's perfluorinated membranes in proton-exchange membrane fuel cells, **29**, 389
high energy efficiency and high power density proton exchange membrane fuel cells – electrode kinetics and mass transport, **36**, 299
high power density proton-exchange membrane fuel cells, **47**, 353
hydrogen-oxygen proton-echange membrane fuel cells and electrolyzers, **29**, 399
parametric modelling of the performance of a 5-kW proton-exchange membrane fuel cell stack, **49**, 349
proton exchange membrane fuel cell systems engineering at Vickers Shipbuilding and Engineering Limited (VSEL), **37**, 155
Proton exchange membranes
simulation studies on the performance of the hydrogen electrode bonded to proton exchange membranes in the hydrogen/bromine fuel cell, **28**, 301
Protonic battery(ies)
is 'protode' a new name for composite anodes in solid-state protonic batteries?, **48**, 385
PTFE dispersion
influence of PTFE dispersion in the catalyst layer of porous gas-diffusion electrodes for phosphoric acid fuel cells, **50**, 163
Pulse charging
the effect of pulse charging on the cycle-life performance of zinc/nickel oxide cells, **22**, 77
Pulsed current
pulsed-current formation of tetrabasic lead sulfate in cured lead/acid battery plates, **42**, 55
Pulse power
pulse power characteristics of poly(3-methylthiophene) cathodes in $Li(SO_2)_3AlCl_4$ electrolyte, **36**, 175
Pulse power tests
pulse power tests on nickel oxide electrodes for nickel/zinc eletric vehicle batteries, **21**, 33
Pumping system
optimum design of a photovoltaic powered pumping system, **50**, 1
Pyrite-bases cathodes
a study of pyrite-based cathodes for ambient temperature lithium batteries by *in situ* ^{57}Fe Mössbauer spectroscopy, **26**, 333
Pyrographite
electrochemical intercalation of fluorides into pyrographite, **13**, 1
Pyrolysis
optimization of the pyrolysis temperature of active carbon–CoTMPP catalysts for air electrodes in alkaline media, **17**, 345

Quality control
intercell currents in assembly of modules: quality control considerations, **32**, 353
quality-control techniques for dry charging lead/acid batteries, **19**, 189
Quinone
cyclic voltammetric study of quinone–hydroquinone organic system in aqueous magnesium perchlorate electrolyte, **45**, 177

Radiation
effect of geosynchronous altitude radiation on performance of Ni/H_2 cells, **12**, 323
Radioisotope thermoelectric generator

recent advances in silicon–germanium alloy technology and an assessment of the problems of building the modules for a radioisotope thermoelectric generator, **19**, 247
Raman spectroscopy
in situ Raman spectra of the discharge products of calcium and lithium-anoded thionyl chloride cells — sulfur dioxide generation in oxyhalide systems, **34**, 1
micro-Raman study of electrode surface in $Li/SOCl_2$ cells (extended abstract), **26**, 439
Raman and ^7Li NMR spectroscopic studies of Li/SO_2 rechargeable cells, **35**, 143
Raman spectral observation of a 'new phase' observed in nickel electrodes cycled to failure, **36**, 279
Raman spectroscopic studies of the structure of electrolytes used in the $Li/SOCl_2$ battery, **9**, 267
Raman spectroscopic study of $LiAlCl_4/SOCl_2/SO_2$ systems, **14**, 77
Raman studies
interactions of SO_2 with $Ca(AlCl_4)_2$–SO_2Cl_2 electrolyte: Raman studies, **25**, 187
in situ micro-Raman study of discharge products of $Li/SOCl_2$ cells, **20**, 69
RAPS (remote area power supply)
affordable remote-area power supply in the Philippines, **38**, 171
development of lead/acid batteries for domestic remote-area power supplies, **23**, 233
experiences with lead/acid battery management in remote-area power-supply (TAPS) systems, **35**, 359
load management in remote-area power-supply (RAPS) systems, **35**, 431
monitoring battery performance in remote-area power-supply (RAPS) systems, **35**, 421
performance of lead/acid batteries in remote-area power-supply applications, **35**, 385
remote area power supply systems: a case study of requirements and options, **16**, 205
Rate-limiting mechanisms
rate limiting mechanisms in lithium–molybdenum disulfide batteries, **14**, 201
Reaction distribution
design optimization of tall tubular lead/acid cells based on an analysis of the reaction distribution, **16**, 65
Reaction products
effect of changes in engineering design on the distribution of reaction products and the electrochemical properties of tubular electrodes, **10**, 71
reaction products on current or potential reversal in $Li/SOCl_2$ cells, **13**, 287
Recharge
electrodeposited α-PbO_2 and β-PbO_2 in sulfuric acid: recharge, cycling and morphology, **13**, 223
influence of recharge potential and acid concentration on the discharge behaviour of PbO_2 electrodes, **46**, 231
Rechargeability
the effect of the amount of electrolyte in the anode gel on the rechargeabilitty of alkaline manganese dioxide/zinc cells, **27**, 145
lithium rechargeability on different substrates, **47**, 57
rechargeability and rate capability of polymer electrolyte batteries at room temperature, **32**, 175
Rechargeable alloys
investigations on rechargeable lithium alloys on the basis of Al–Ni and A–Mn alloys, **44**, 421
Rechargeable battery(ies)
advanced rechargeable sodium batteries with novel cathodes, **29**, 301
ambient temperature rechargeable polymer electrolyte batteries, **43**, 195
anatase as a cathode material in lithium–organic electrolyte rechargeable batteries, **6**, 261
application of chemical synthesized polypyrrole for a rechargeable lithium battery, **27**, 59
chemical lithium extraction from manganese oxides for lithium rechargeable batteries, **34**, 161
conductivity of electrolytes for rechargeable lithium batteries, **35**, 59
design concepts of high power bipolar rechargeable lithium battery, **43**, 327

development of lithium batteries in Japan, **26**, 257
the development of lithium rechargeable batteries, **20**, 3
effect of discharge current on cycle life of a rechargeable lithium battery, **24**, 195
an electrochemical investigation of the temperature dependence of inorganic electrolytes in rechargeable lithium batteries, **26**, 511
electrochemical and structural characteristics of niobium(V) oxide in a rechargeable lithium battery, **20**, 193
enhancement of the ionic conductivity and the amorphous state of solid polymer electrolytes for rechargeable lithium batteries, **44**, 473
ethylene carbonate-based electrolytes for rechargeable lithium batteries, **26**, 449
fabrication and characterizatin of amorphous lithium electrolyte thin films and rechargeable thin-film batteries, **43**, 103
high voltage, rechargeable lithium batteries using newly-developed carbon for negative electrode material, **43**, 233
Li/SO_2 rechargeable batteries, **35**, 153
lithium/polymer/polymer solid-state rechargeable batteries, **44**, 453
new anions as supporting electrolytes for rechargeable lithium batteries, **20**, 287
a new electrode for a poly(pyrrole)-based rechargeable battery, **40**, 299
new lithium–manganese composite oxide for the cathode of rechargeable lithium batteries, **34**, 147
new negative electrode matrix, BC_2N, for rechargeable lithium batteries, **43**, 75
a new rechargeable lithium battery, **26**, 233
ω-$Li_xV_2O_5$ – a new electrode material for rechargeable lithium batteries, **34**, 113
organic additives for the electrolytes of rechargeable lithium batteries, **26**, 579
organic electrolyte solutions for rechargeable lithium batteries, **20**, 273
overview of rechargeable battery testing in Japan, **17**, 55
overview of rechargeable battery testing in the United States, **17**, 64
oxide-based bifunctional oxygen electrode for rechargeable metal/air batteries, **25**, 141
practical rechargeable lithium batteries, **26**, 247
preliminary studies on a rechargeable acidic lead/mercury battery, **32**, 187
preparation and electrochemical characteristics of new Li/Mn/V/O system as positive materials for rechargeable lithium batteries, **44**, 635
rechargeable $Li/LiMn_2O_4$ batteries with a polymeric solid electrolyte, **41**, 315
rechargeable lithium batteries with a polymeric single-ion conductor, **50**, 369
rechargeable lithium battery based on pyrolytic carbon as a negative electrode, **26**, 545
a rechargeable lithium battery employing a porous thin film of $Cu_{3+\delta}Mo_6S_{7.9}$, **20**, 199
rechargeable lithium battery with spinel-related λ-MnO_2. I. Synthesis of λ-MnO_2 for battery applications, **44**, 551
rechargeable lithium battery with spinel-related MnO_2. II. Optimization of the $LiMn_2O_4$ synthesis conditions, **41**, 305
a rechargeable $Zn/ZnCl_2$, NH_4Cl/polyaniline/carbon dry battery, **45**, 153
reproducibility and reliability of rechargeable lithium/molybdenum disulfide batteries, **25**, 265
small particle-size lithium-vanadium oxide: an improved cathode material for high rate rechargeable lithium batteries, **27**, 35
the stabilization of $LiAsF_6$/1, 3-dioxolane for use in rechargeable lithium batteries, **26**, 519
a study of the incorporation reaction of lithium into V_6O_{13} in a rechargeable lithium battery, **26**, 347
understanding the behaviour of rechargeable lithium batteries (extended abstract), **26**, 77
an update of the Li metal-free rechargeable battery based on $Li_{1+x}Mn_2O_4$ cathodes and carbon an-

odes, **44**, 689
Rechargeable cathodes
a comparative electrochemical study of MoO_3, V_2O_5 and MoV_2O_8 as rechargeable cathodes in lithium cells, **24**, 85
Rechargeable cells
an all-solid-state lithium/polyaniline rechargeable cell, **39**, 255
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, **41**, 321
electrochemical charactrization of flat-plate rechargeable alkaline manganese dioxide/zinc cells, **47**, 13
a high performance Li_xMnO_y cathode material for rechargeable lithium cells, **44**, 681
Li/Li_xNiO_2 and Li/Li_xCoO_2 rechargeable systems: comparative study and performance of practical cells, **43**, 209
Li/SO_4 rechargeable cells containing added bromine, **21**, 143
lithium-ion rechargeable cells with $LiCoO_2$ and carbon electrodes, **43**, 241
lithium rechargeable cell with a poly 3-methylthiophene cathode and $LiAsF_6$–dimethyl carbonate electrolyte, **36**, 561
materials science principles related to alloys of potential use in rechargeable lithium cells, **26**, 109
multinary alloy electrodes for solid state batteries. II. A new Li–Si–Mg alloy negative electrode material for use in high energy denisty rechargeable lithium cells, **38**, 363
oxygen cycle in sealed rechargeable cells, **31**, 139
oxygen electrodes for rechargeable alkaline fuel cells. III, **36**, 323
preliminary elvaluation of rechargeable lithium cells for a totally-implantable venticular assist device, **41**, 87
Raman and ^7Li NMR spectroscopic studies of Li/SO_2 rechargeable cells, **35**, 143
rechargeable iron/air cells employing bifunctional oxygen electrodes of oxide pyrochlores, **35**, 113
a rechargeable Li/Li_xCoO_2 cell incorporating a $LiCF_3SO_3$–NMP electrolyte, **44**, 673
a rechargeable Li/Li_xCoO_2 cell, **21**, 25
rechargeable lithium/titanium disulphide cells of spirally-wound design, **26**, 309
solvent effects on rechargeable lithium cells, **20**, 279
status of the development of rechargeable lithium cells, **47**, 287
the SWING system, a nonaqueous rechargeable carbon/metal oxide cell, **43**, 223
theoretical performance of a hydrogen/bromine rechargeable SPE fuel cell, **22**, 423
vanadium-doped lithium thiochromite: properties, crystal structure and electrochemical performance in rechargeable Li cells, **34**, 129
vanadium oxides as electrode materials for rechargeable lithium cells, **20**, 165
vanadium oxides in electrodes for rechargeable lithium cells, **20**, 157
Rechargeable electrodes
experimental survey of rechargeable alkaline zinc electrodes, **13**, 9
polyphase alloys as rechargeable electrodes in advanced battery systems, **22**, 341
rechargeable alkaline iron electrodes, **34**, 269
Rechargeable fuel cell battery(ies)
the theory of stabilization of the output power of a rechargeable fuel cell battery under conditions of significant concentration polarization, **4**, 145
Rechargeable fuel cells
oxygen electrodes for rechargeable alkaline fuel cells — II, **29**, 423
oxygen electrodes for rechargeable alkaline fuel cells, **22**, 399
Rechargeable lithium battery(ies)
a 65 A h rechargeable lithium molybdenum disulfide battery, **18**, 117
ageing of rechargeable lithium batteries, **14**, 57
Rechargeable lithium cells
low temperature studies on rechargeable lithium cells, **13**, 319
the use of the reactive ether, tetrahydrofuran (THF), in rechargeable lithium cells, **9**, 239
Rechargeable positive electrodes

status of rechargeable positive electrodes for ambient temperature lithium batteries, **7**, 1
Rechargeable systems
the MOLICEL® rechargeable lithium system: multicell aspects, **21**, 195
Rechargeable zinc electrodes
a study of rechargeable zinc electrodes for alkaline cells requiring anodic limitation, **6**, 271
Recombinant battery(ies)
investigations into the electrochemistry of recombinant, sealed lead/acid batteries, **42**, 165
metallurgy of recycled lead for recombinant batterues, **42**, 25
Recombination
noble metal-free catalysts for the hydrogen/oxygen recombination in sealed lead/acid batteries using immobilized electrolytes, **40**, 175
Recombination battery(ies)
lead/acid recombination batteries: principles and applications, **31**, 23
Recombination device
a self-limiting hydrogen/oxygen recombination device, **8**, 211
Recombination electrodes
activity and corrosion of tungsten carbide recombination electrodes during lead/acid battery operation, **40**, 333
performance of tungsten carbide recombination electrodes under various orerating conditions, **40**, 341
Rectification
the influence of surface preparationon rectification in aluminum/polycrystalline silicon solar cells, **7**, 191
Recycled lead
metallurgy of recycled lead for recombinant batterues, **42**, 25
Recycling
closed loop recycling of lead/acid batteries, **42**, 331
lead/acid battery recycling and the new Isasmelt process, **42**, 299
recycling of lead/acid batteries: the Ginatta process, **31**, 287
recycling the plastic components in today's lead/acid battery, **42**, 315
Redox battery(ies)
characteristics and performance of 1 kW UNSW vanadium redox battery, **35**, 399
investigation of the V(V)/V(IV) system for use in the positive half-cell of a redox battery, **16**, 85
preparation and evaluation of composite membrane for vanadium redox battery applications, **39**, 11
progress in US Government sponsored battery development (1978–1979); redox batteries, **5**, 381
Redox behaviour
the influence of material dispersion on the redox behaviour of nickel oxide electrodes, **12**, 203
Redox cells
evaluation of electrode meterials for vanadium redox cell, **19**, 45
fabrication and activation studies of condcting plastic composite electrodes for redox cells, **36**, 29
Redox couple
electrochemical behaviour of vanadium(V)/vanadium(IV) redox couple at graphite electrodes, **39**, 1
Redox flow battery(ies)
characteristics of a new all-vanadium redox flow battery, **22**, 59
development of a 0.1 kW power accumulation pilot plant based on an Fe/Cr redox flow battery. Part 1. Considerations on flow-distribution design, **48**, 293
development of Redox flow batteries. A historical bibliography, **27**, 219
evaluation of an NH_4VO_3-derived electrolyte for the vanadium-redox flow battery, **45**, 43
optimization studies on a Fe/Cr redox flow battery, **39**, 147
Redox flow cells
behaviour of the Cr(III)/Cr(II) reaction on gold/graphite electrodes. Application to redox flow storage cell, **35**, 225
Fe(III)/Fe(II) ligand systems for use as negative half-cells in redox-flow cells, **27**, 119
a study of the V(II)/V(III) redox couple for redox flow cell applications, **15**, 179
Redox flow system
a study of the discharge performance of the Ti/Fe redox flow system, **13**, 65
Redox processes

redox processes in the Li_xFeS_2/Li electrochemical system studied through crystal Mössbauer, and EXAFS analyses, **26**, 325
Redox systems
studies on the Fe^{2+}/Fe^{3+} redox system using d.c. linear polarisation and impedance techniques, **19**, 269
Reduction reaction mechanism
kinetic studies of the electrochemical reaction between lithium and phthalocyanine. II. Reduction reaction mechanism, **16**, 45
Refining
refining of a lead/acid battery grid alloy, **3**, 183
Reformer
ammonia as a feedstock for a hydrogen fuel cell; reformer and fuel cell behaviour, **49**, 271
Regenerative fuel cells
application of regenerative fuel cells for space energy storage: a comparison to battery systems, **40**, 307
performance goals in RFC development for low earth orbit space missions, **45**, 187
regenerative fuel cells for space applications, **22**, 377
system mass optimization of hydrogen/oxygen based regenerative fuel cells for geosynchronous space missions, **38**, 303
Relative humidity
relative-humidity/temperature relationships for saturated salt solutions: application to lead/acid plate curing, **22**, 169
Reliability
performance and reliability of the lithium/iodine battery, **5**, 1
reliability of commercial lithium button cells. I. Effect of the environment on the passivation resistance, **25**, 49
reliability of commercial lithium button cells. II. Effect of the state-of-discharge and environment on the passivation resistance, **25**, 61
reliablity analysis of lithium cells, **26**, 223
reproducibility and reliability of rechargeable lithium/molybdenum disulfide batteries, **25**, 265
safety and reliability studies of primary lithium batteries, **43**, 247
studies of high reliability long-life Li/SO_2 cells, **20**, 27
Remote areas
affordable remote-area power supply in the Philippines, **38**, 171
experiences with lead/acid battery management in remote-area power-supply (TAPS) systems, **35**, 359
load management in remote-area power-supply (RAPS) systems, **35**, 431
monitoring battery performance in remote-area power-supply (RAPS) systems, **35**, 421
performance of lead/acid batteries in remote-area power-supply applications, **35**, 385
tubular-plate lead/acid battteries for remote-area energy storage, **28**, 187
Renewable energy systems
batteries for autonomous renewable energy systems, **35**, 371
Reserve battery(ies)
aluminium and manganese as anodes for dry and reserve batteries, **11**, 155
performance characteristics of chloro-substituted dinitrobenzene for magnesium reserve batteries, **45**, 119
structure and properties of electrochemically active thin PbO_2 films for reserve batteries, **31**, 339
Reserve cells
system noise as a signal source for impedance measurements on batteries connected to operating equipment, **42**, 381
Residual charge analyser
a nickel/cadmium cell residual charge analyser, **13**, 75
Resistance
determination of impedance parameters of individual electrodes and internal resistance of batteries by a new non-destructive technique. 2. Theoretical approach, **50**, 33
factors affecting the internal resistance of silver/silver molybdate/iodine cells, **45**, 255
the internal resistance of plastic-bonded (pressed type) high rate Ni electrodes, **8**, 61
measurement of the contact resistance between the active mass and the cur-

rent collector in lead/acid battery electrodes, **30**, 315
method and device for testing separators by measuring local transverse electrical resistance, **30**, 321
simulation of the discharge curve by short-time discharge based on the power of internal resistance, **50**, 97
Resistivity
investigation of carbon–Teflon plaque resistivities, **6**, 185
Resting
factors affecting the formation of lead/acid tubular positives. II. Resting and extreme conditions, **10**, 389
Reversible layer-type electrodes
mechanistic studies of reversible layer-type electrodes, **9**, 345
Road tests
comparison of laboratory, dynamometer, and road tests of an EV, **17**, 279
Rocking chair battery(ies)
the $Li_xTiS_2|Li_{(1-x)}CoO_2$ solid-state rocking chair battery, **44**, 481
plasticized carbon electrodes of interest for lithium rocking chair batteries, **45**, 333
Rocking chair configurations
on the use of rocking chair configurations for cyclable lithium organic electrolyte batteries, **8**, 289
Rotating-disc study
a rotating-disk study on Teflon-bonded porous zinc electrodes, **15**, 93
Rotating ring–disc electrode study
a rotating ring–disc electrode study of impurity effects on lead corrosionin sulfuric acid, **13**, 55
Rural electrification
market potential for lead/acid batteries for rural electrification needs in India, **23**, 221
Ruthenium
development and evaluation of platinum–ruthenium bimetal catalyst-based carbon electrodes for hydrogen/oxygen fuel cells in NaOH media, **45**, 139
insertion of lithium into RuO_2/TiO_2 electrodes, **44**, 547

Safety
fault tree safety analysis of a large Li/$SOCl_2$ spacecraft battery, **21**, 207
primary Li/$SOCl_2$ cells. X. Optimization of D cells with respect to energy density, storability and safety, **5**, 57
safety aspects in primary high-rate lithium cells, **43**, 259
safety considerations for fabricating lithium battery packs, **18**, 101
safety hazards associated with the charging of lithium/sulfur dioxide cells, **18**, 89
safety and reliability studies of primary lithium batteries, **43**, 247
safety study of electrolyte solutions for lithium batteries by accelerating-rate calorimetry, **44**, 523
safety test results of lithium/thionyl chloride wound-type cells, **26**, 201
Salinity
reverse electrodialysis: study of electrical energy obtained from two solutions of different salinity, **10**, 203
Satellites
earth radiation budget satellite (ERBS) orbiting profiles and Ni/Cd use, **21**, 291
satellite power using a magnetically suspended flywheel stack, **22**, 301
Scaling properties
introduction to the scaling properties in elctrochemistry: from the "TEISI" model to the lithium fractal ordering in Li_xFeS_2 layered structure, **9**, 359
Scanning laser microscopy
scanning laser microscopy studies of grid-paste interfacial areas, **40**, 147
Scanning photocurrent imaging
the use of scanning photocurrent imaging to study the distribution of lead monoxide in corrosion layers on lead/acid battery grids, **38**, 373
Scanning tunneling microscopy
metal depositon and dissolution monitored by *in situ* scanning tunneling microscopy, **43**, 169
scanning tunneling microscopy of lead dioxide, **40**, 149
Scrap battery(ies)
new approaches to the collection of scrap batteries, **42**, 319
Screen-printed electrodes
photoelectrochemical study of screen-printed cadmium sulfide electrodes, **24**, 41
Sealed accumulators

a correlation between porous structure of the separator and barodynamic characteristics of sealed lead/acid accumulators, **39**, 179
Sealed battery(ies)
accelerated cycle-life testing of small sealed lead/acid batteries, **38**, 143
computer formation of sealed lead/acid batteries, **38**, 137
current technology of separators for seal (recombination) lead/acid batteries, **19**, 175
cycle life measurement of a sealed lead/acid battery, **34**, 25
development of sealed lead/acid battery 'SB60-S4' for automobile use, **38**, 123
development status of a sealed bipolar lead/acid battery for high-power battery applications, **40**, 63
on the hydrogen balance in sealed lead/acid batteries and its effect on battery performance, **42**, 89
investigations into the electrochemistry of recombinant, sealed lead/acid batteries, **42**, 165
lead alloys for maintenance-free and sealed lead/acid batteries, **46**, 327
measures for minimizing hydrogen pressure in sealed lead/acid batteries, **31**, 107
noble metal-free catalysts for the hydrogen/oxygen recombination in sealed lead/acid batteries using immobilized electrolytes, **40**, 175
relating recombination mat separator properties to sealed lead/acid battery performance, **31**, 125
sealed lead/acid batteries: theory and applications, **31**, 57
sealed lead/acid battery with auxiliary tungsten carbide electrodes, **31**, 79
sealed lead/acid battery for motorcycle use, **33**, 117
small-sized sealed lead/acid batteries, **19**, 215
technological progress in sealed lead/acid batteries, **36**, 479
Sealed cells
impedance characteristics of sealed lead/acid cells during galvanostatic charge, **37**, 403
impedance peaks of sealed nickel/cadmium cells at low states-of-charges, **37**, 335
non-destructive characterization of sealed lead/acid battery cells with electrochemical impedance spectroscopy, **32**, 261
oscillations of electrode potentisls in sealed lead/acid cells, **45**, 325
oxygen cycle in sealed rechargeable cells, **31**, 139
preliminary results from an improved theoretical approach ttowards characterizing sealed lead/acid cells, **31**, 115
a review of oxygen recombination in the sealed lead–acid cell, **19**, 261
sealed nicek/zinc cells, **37**, 297
Sealed gas recombining battery(ies)
sealed gas recombining lead/acid batteries. Part I. A simple theoretical approach, **25**, 99
sealed gas recombining lead/acid batteries. Part II. Analysis of real systems, **25**, 229
Sea water
development of an aluminium/sea water battery for sub-sea applications, **47**, 119
performance characteristics of a pilot sea-water activated battery with Pb/$PbCl_2$ cathodes, prepared by cyclic voltammetry, **41**, 55
Secondary battery(ies)
advanced secondary battery development and testing. A Canadian perspective, **17**, 42
application of FeOCl derivatives as cathode materials for a secondary lithium battery. II. Comparison of the discharge and charge characteristics of γ-FeOOH prepared from the intercalation compound of FeOCl and 4-aminopyridine with those of FeOOH intercalated with aniline (a-FeOOH(AN)), **40**, 291
application of FeOOH derivatives for a secondary lithium battery, **44**, 627
carbon/lithium anodes for lithium secondary batteries, **39**, 185
characteristics of a lithium secondary battery using chemically-synthesized conductive polymers, **34**, 153
copper (II) sulfide as cathode active material in secondary lithium batteries, **44**, 701
cycling behaviour of electrodeposited zinc alloy electrode for secondary

lithium batteries, **40**, 283
development of cylindrical secondary lithium/polyaniline batteries, **44**, 669
the diffusion of various anions in a polyacetylene cathode of a secondary lithium battery, **25**, 277
electrochemical characteristics of MnO_2–V_2O_5 composites serving as positive material for secondary lithium batteries, **35**, 313
electrochemical method for studying the reversibility of the lithium intercalation in secondary batteries, **9**, 321
fundamental studies of utility requirements for secondary batteries — lead/acid batteries, **17**, 295
improvement of lithium-containing manganese dioxide (composite dimensional manganese oxide: CDMO) as positive material for lithium secondary batteries, **39**, 51
investigation of an electrolyte for lithium secondary batteries with lithium-containing manganese dioxide as the positive material, **43**, 217
lithium-containing manganese dioxide (composite dimensional manganese oxide: CDMO) as positive material for a lithium secondary battery, **32**, 373
lithium/lithium vanadium oxide secondary batteries. IV. Evaluation of fractors affecting the performance of test cells, **15**, 13
the lithium/titanium disulphide secondary battery (extended abstract), **26**, 313
manganese oxides for a lithium secondary battery — composite dimensional manganese oxide (CDMO), **26**, 389
molybdic oxides as cathode active materials in secondary lithium batteries, **26**, 373
nickel chevrel-phase sulfides $Ni_yMo_6S_{8-z}O_n$ as the cathode of lithium secondary batteries, **44**, 651
overview of advanced secondary battery testing in Britain, **17**, 53
performance limits of primary and secondary batteries, **4**, 215
polybenzene as a positive electrode in aqueous secondary battteries, **16**, 179
potassium vanadates — promising materials for secondary lithium batteries, **44**, 561
recent developments in secondary lithium battery technology, **14**, 179
solution of $LiAsF_6$ in 1,3-dioxolane for secondary lithium batteries, **39**, 163
studies of carbon as negative electrode materials for secondary lithium batteries, **44**, 399
studies of spinel $LiCr_xMn_{2-x}O_4$ for secondary lithium battery, **44**, 539
synthesis of $LiCoO_2$ from cobalt–organic acid complexes and its electrode behaviour in a lithium secondary battery, **40**, 347
thiospinels as cathode for lithium secondary battery, **44**, 619
to answer the urgent needs for secondary batteries, **11**, 167

Secondary cells
advances in ambient temperature secondary lithium cells, **29**, 579
carbon as negative electrodes in lithium secondary cells, **26**, 535
chemically desodiated thiochromites as cathode materials in secondary lithium cells, **26**, 285
development of ambient temperature secondary lithium cells, **22**, 269
further electrochemical studies on Li/LiV_2O_4 secondary cells, **34**, 199
methods for the reduction of shape change and dendritic growth in zinc-based secondary cells, **35**, 333
secondary lithium cell based on Li_x-$Cr_{1-y}O_yS_2$ obtained in potassium polysulphide melts, **34**, 119
a wound-type lithium/polyaniline secondary cell, **39**, 259

Secondary lead
the significance of secondary lead, **19**, 121
use of secondary lead for new generations of lead/acid batteries, **42**, 11

SEI conduction
space-charge model of the SEI conduction in the Li/$SOCl_2$ system, **44**, 391

Selenium
electrochemical solar cells with layer-type semiconductor anodes. Performance of *n*-$MoSe_2$ cells, **6**, 371
electron and phonon aspects in a lithium intercalated InSe cathode, **20**, 213

photocatalytic behaviour of n-$MoSe_2$ single crystals in contact with the I^-, I_2 redox couple in solar photoelectrochemical cells, **7**, 275
Separators
aerospace nickel/cadmium cell separator qualification program, **18**, 147
aspects of lead/acid battery technology. 7. Separators, **46**, 117
a comparison of flooded, gelled and absorptive-separator lead/acid cells, **23**, 127
a correlation between porous structure of the separator and barodynamic characteristics of sealed lead/acid accumulators, **39**, 179
current technology of separators for seal (recombination) lead/acid batteries, **19**, 175
design, development, performance, and reconditioning of Ni/Cd batteries using polypropylene separators, **12**, 305
envelope-separator technology for lead/acid automotive batteries, **23**, 113
from leaf-type to pockets: development trends in Western Europe for automotive battery separators, **38**, 103
glass-fibre separators for valve-regulated batteries, **48**, 233
grace DAKASEP alkaline battery separator, **21**, 277
graft copolymer separators — development and use, **9**, 101
impedance of nickel/cadmium cells with nylon separator hydrolysate, **50**, 375
influence of separators, expanders and electrolyte purity on the performance of maintenance-free lead/acid batteries, **31**, 183
influence of separator structure on the performance of valve-regulated batteries, **42**, 155
long life sealed nickel/zinc cell using a new separator, **9**, 147
magnesia porous particle separators for lithium–aluminum/iron sulfide batteries, **13**, 235
method and device for testing separators by measuring local transverse electrical resistance, **30**, 321
microporous polyethylene separators — today and tomorrow. Separator development trends for modern automotive batteries, **42**, 211
operation of oxygen cycle during charge and discharge of sealed PbO_2/Pb cells using the separator as electrolyte carrier, **27**, 201
performance of porous plastic separators in zinc/bromine cells, **22**, 29
protection of sealed nickel/cadmium cells against cell voltage reversal. II. Influence of the separator on the formation of cadmium bridges, **16**, 253
qualification testing of General Electric 50 A h nickel/cadmium cells with new separator and new positive-plate processing, **18**, 135
qualification testing of General Electric 50 A h nickel/cadmium cells with Pellon 2536 separator and passivated positive plates, **21**, 313
recent advances in polyethylene separator technology, **34**, 257
relating recombination mat separator properties to sealed lead/acid battery performance, **31**, 125
separator technology for lead/acid batteries, **19**, 181
simple but informative expeirments on a plain separator for lead/acid batteries, **15**, 157
superiority and failure mode of automotive batteries insulated with polyethylene separators, **48**, 129
surface treatment of alloy separator in a planar-type solid oxide fuel cell, **50**, 361
update of separator technology for lead/acid batteries, **23**, 109
worldwide trends in battery separator technology and usage, **40**, 195
Service life
automotive lead/acid battery service-life: measurement and surveys, **23**, 175
Ships
possible fuel cell applications for ships and submarines, **29**, 181
Silica
valve-regulated lead/acid batteries with granular silica, **42**, 173
Silicon
improvement of solid electrolyte conductivity and cathodic properties of the $Li|LiI \cdot H_2O(SiO_2)|PbI_2$ electrochemical cell, **38**, 345

the influence of surface preparationon rectification in aluminum/polycrystalline silicon solar cells, **7**, 191
kinetics of hydrogen evolution reaction on lead/acid battery negative plates with silicate and antimony added to the electrolyte, **30**, 169
multinary alloy electrodes for solid state batteries. II. A new Li–Si–Mg alloy negative electrode material for use in high energy denisty rechargeable lithium cells, **38**, 363
recent advances in silicon–germanium alloy technology and an assessment of the problems of building the modules for a radioisotope thermoelectric generator, **19**, 247
solar grade silicon *versus* electronic grade silicon for photovoltaic applications, **11**, 115

Silver
$(Ag_2O)_x(Li_2O)_{1-x}2B_2O_3$ mixed cation glasses, **9**, 379
alpha-phase stabilization in silver and copper halide solid electrolytes, **4**, 165
application of silver boromolybdate glasses as electrolytes in solid-state cells, **32**, 397
behaviour of $AgBi(Cr_2O_7)_2$ as a possible cathode for lithium cells, **10**, 63
discharge characteristics of lithium/molten nitrate thermal battery cells using silver salts as solid cathode materials, **16**, 243
on the discharge mechanism of silver/alkylammonium polyiodide solid state cells, **2**, 389
effect of silver, copper and palladium additives on the performance of carbon electrodes in an $Li/SOCl_2$ system, **16**, 233
electrical conductivity of a system of Ag_2SO_4:AgI eutectic added to $30Li_2SO_4$:$70Ag_2SO_4$, **27**, 323
electrochemical performance of silver/molybdotungstate-amorphous-electrolyte cells with charge-transfer-complex cathodes, **25**, 287
factors affecting the internal resistance of silver/silver molybdate/iodine cells, **45**, 255
heat dissipation from lithium/silver vanadium oxide cells during storage and low-rate discharge, **20**, 179
Li–$AgBi(CrO_4)_2$: a new highly reliable lithium battery for long service life applications, **9**, 339
lithium/silver vanadium oxide batteries with various silver to vanadium ratios, **21**, 133
low temperature electrolytes for lithium/silver vanadium oxide cells, **34**, 51
a novel Pd–Ag membrane anode for alkaline fuel cells suitable for CO_2-containing hydrogen, **45**, 93
performance of $30Li_2SO_4$:$70Ag_2SO_4$ solid electrolyte in galvanic cells, **27**, 331
plastic-bonded electrodes for nickel/cadmium accumulators. IX. Oxygen recombination rate on plastic-bonded cadmium electrodes with different active materials, **8**, 273
a review of silver, copper and lithium solid-state power sources, **1**, 333
self-discharge of low-mercury zinc/silver-oxide button cells, **22**, 163
silver arsenate amorphous electrolyte batteries: conduction characteristics and electrochemical performance, **34**, 339
thermoelectric power of AgI–Ag oxysalt ionic solids, **2**, 257
voltage delay and complex impedance characteristics of a high-rate lithium/silver vanadium oxide multiplate battery (extended abstract), **26**, 365

Silver arsenate electrolytes
silver arsenate amorphous electrolyte batteries: conduction characteristics and electrochemical performance, **34**, 339

Silver catalysts
an investigation of the oxygen cathode with a silver catalyst polarized in the region of negative potentials, **7**, 105
the silver catalyst in the hydrophobic oxygen electrode, **2**, 273

Silver cathodes
the high rate discharge characteristics of silver chromate, silver molybdate, and silver tungstate cathodes in molten nitrate electrolytes, **15**, 141

Silver iodate
use of silver iodate as a cathode for lithium cells, **1**, 99

Silver iodide

comments on the discharge mechanism of silver iodide-based solid electrolyte cells, **4**, 169
electrical conductivity of binary cells of type silver iodide–piperazinium and *N,N'*-alkyl-piperazinium diiodides, **1**, 359
Silver oxide
investigation of low-zinc-solubility electrodes and electrolytes in zinc/silver oxide cells, **39**, 333
quality analysis of reserve-type silver oxide/zinc batteries by capacitance and phase-angle measurements, **21**, 165
Silver salts
lithium cells based on silver salts as cathodes, **1**, 193
on the possibility of using silver salts other than Ag_2CrO_4 in organic lithium cells, **3**, 347
Silver selenate
silver selenate and silver tellurate as positive materials for lithium primary power sources, **3**, 257
Silver tellurate
silver selenate and silver tellurate as positive materials for lithium primary power sources, **3**, 257
Silver/zinc battery(ies)
construction of miniature silver/zinc batteries and the technology for their mass production, **8**, 67
Simulation
an aggregate model of the positive electrode system of the lead/acid cell. II. Simulation results, **41**, 39
three-dimensional and time-dependent simulation of a planar solid oxide fuel cell stack, **49**, 333
three-elemental models for the positive electrode of the lead/acid cell. II. Simulation results, **41**, 13
Sintered electrodes
void volume consideration in evaluating the capacity of nickel/cadmium cells with sintered electrodes, **25**, 159
Sodium
corrosion behaviour of aluminium in molten sodium, **47**, 45
determination of the dissociation constant of molten $Li_2CO_3/Na_2CO_3/K_2CO_3$ using a stabilized zirconia oxide-ion indicator, **16**, 75
dissolution behaviour of copper and nickel oxides in molten $Li_2CO_3/Na_2CO_3/K_2CO_3$, **23**, 357
effect of sodium cation on lithium corrosion in aprotic media (extended abstract), **26**, 455
effect of sodium on lithium corrosion in aprotic media, **28**, 335
effects of sulfur additive on the performance of $Na/NiCl_2$ cells, **48**, 349
electrochemical aspects of the deintercalation of layered AMO_2 compounds, **14**, 231
evaluation and optimization of pelletized $LiAl/NaAlCl_4/MoCl_5$ electrochemical cells, **3**, 81
experimental studies of transition metal chloride electrodes in undivided cells using molten $NaAlCl_4$ electrolyte, **36**, 537
impedance measurements of the lead/sodium sulfate system: synthesis of a.c. analogue circuit, **30**, 287
the increase of stability of Li_xCoO_2 electrodes of cointercalated sodium, **39**, 313
the $LiAl/NaAlCl_4/MoCl_5$ thermal battery, **3**, 95
performance of molten salt sodium/β-alumina/$SbCl_3$ cells, **3**, 201
Sodium battery(ies)
advanced rechargeable sodium batteries with novel cathodes, **29**, 301
Sodium cells
solid-state sodium cells – an alternative to lithium cells?, **26**, 341
Sodium electrolytes
the preparation and electrochemical properties of chromium oxides CrO_x both in lithium and sodium aprotic electrolytes, **39**, 133
Sodium/metal chloride battery(ies)
sodium/metal chloride battery research at the Jet Propulsion Laboratory (JPL), **36**, 385
Sodium–potassium alloy
a room temperature β-alumina primary cell employing sodium–potassium alloy as anodic reactant, **3**, 191
Sodium sulfide traction battery(ies)
start-up test for sodium sulfide traction batteries, **17**, 142
Sodium/sulfur battery(ies)

beta-alumina electrolyte for use in sodium/sulfur batteries. Part 1. Fundamental properties, **6**, 143
beta-alumina electrolyte for use in sodium/sulfur batteries. Part 2. Manufacture and use, **7**, 45
current trends in the development of sodium/sulfur batteries, **4**, 301
progress in US Government sponsored battery development (1978–1979); sodium/sulfur batteries, **5**, 355
the sodium/sulfur battery, **11**, 143
sodium/sulfur battery flight experiment definition study, **29**, 555
Sodium/sulfur cells
accelerated life testing of sodium/sulfur cells, **17**, 195
behaviour of a sodium/sulfur cell with a dynamic sulfur electrode, **4**, 33
casing materials for sodium/sulfur cells, **3**, 227
experimental study of six interconnected sodium/sulfur cells, **3**, 45
the impedance of sodium/sulfur cells at very low frequencies, **32**, 63
in-test and post-test analyses of sodium/sulfur cells, **17**, 228
post-test analyses of sodium/sulfur cells and aqueous batteries, **17**, 221
recent advances in Na/S cell development – a review, **3**, 299
some factors affecting sulfur electrode operation in sodium/sulfur cells, **3**, 29
some studies on sodium/sulfur cells, **1**, 109
Sodium/sulfur multitube cells
design and performance of a sodium/sulfur multitube cell, **10**, 263
Sodium/sulfur traction batteries
design of the thermal management systems for sodium/sulfur traction batteries using battery models, **17**, 226
Sodium thiochromite
the lithium/sodium thiochromite all-solid-state high temperature secondary cell, **28**, 279
Solar applications
progress in US Government sponsored battery development (1978–1979); solar applications, **5**, 337
Solar cells
a cadmium sulfide/solid electrolyte photoelectrochemical solar cell, **24**, 121
elecrochemical solar cells with layer-type semiconductor anodes. Performance of n-$MoSe_2$ cells, **6**, 371
the influence of surface preparationon rectification in aluminum/polycrystalline silicon solar cells, **7**, 191
simplified model of a solar cell network distributor, **38**, 239
Solar collector
calculation of the heat dissipation resulting from poor thermal conduction inside a solar collector filled with a microporous solid adsorbant, **50**, 391
solar collectro with an absorbent surface in the form of a venetian blind, **13**, 245
Solar concentrators
modelling a real system: solar concentrators of the Solar Centre of Vignola, Corsica, **24**, 273
simplified model for a solar concentrator, **21**, 113
Solar cooling plant
solar cooling plant: first results of a real apparatus, **13**, 197
Solar-driven refrigerator
comparison of the performance obtained in a tropical country, of a solid absorption, solar-driven refrigerator, and a photovoltaic refrigerator, **15**, 1
Solar dynamic systems
an overview of solar dynamic systems for space applications, **18**, 293
Solar energy
solar energy: battery energy storage control, **35**, 1
Solar photoelectrochemical cells
photocatalytic behaviour of n-$MoSe_2$ single crystals in contact with the I^-, I_2 redox couple in solar photoelectrochemical cells, **7**, 275
Solar power
project Solarland, **23**, 229
Solar power systems
development of sealed lead/acid batteries for solar power systems, **28**, 173
Solar refrigeration
thermal losses in solar refrigeration, **7**, 375
Solar systems
lead/acid batteries for solar (photovoltaic) systems, **19**, 211
Solid electrolyte interphase electrodes

solid electrolyte interphase (SEI) electrodes. Part VI: Calcium/$Ca(AlCl_4)_2$/sulfuryl chloride system, **10**, 125
solid electrolyte interphase (SEI) electrodes. Part VII. The electrochemical behaviour of calcium in $Ba(AlCl_4)_2$ and $Sr(AlCl_4)_2$-thionyl chloride solutions (extended abstract), **26**, 423
Solid electrolytes
alpha-phase stabilization in silver and copper halide solid electrolytes, **4**, 165
a cadmium sulfide/solid electrolyte photoelectrochemical solar cell, **24**, 121
comments on the discharge mechanism of silver iodide-based solid electrolyte cells, **4**, 169
consideration of lithium nitride halides as solid electrolytes in practical galvanic cell applications, **6**, 251
discharge characteristics of solid-state cells with magnesium and copper electrodes and thin-film, **24**, 165
electrical conductivity of a new solid electrolyte glass material Li_2O–$LiNbO_3$–B_2O_3, **13**, 151
evaluation of solid electrolytes for high temperature lithium batteries: a preliminary study, **3**, 59
lithium iodide-based solid electrolytes, **9**, 161
performance of $30Li_2SO_4$:$70Ag_2SO_4$ solid electrolyte in galvanic cells, **27**, 331
semiconductivity and solid electrolyte characteristics of surface films formed on active metal of interest in high energy density batteries, **24**, 243
solid electrolytes containing both mobile and immobile alkali ions, **5**, 137
status report, **11**, 91
thermal efficiency of solid electrolyte fuel cells with mixed conduction, **1**, 311
zinc composite anode for batteries with solid electrolyte, **38**, 379
Solid oxide fuel cells
combining science and practice in the Danish 'DK–SOFC' programme, **49**, 291
global SOFC activities and evaluation programmes, **49**, 103
high temperature solid oxide fuel cell – technical status, **10**, 89
monolithic solid oxide fuel cell development, **29**, 311
production cost estimation of solid oxide fuel cells, **49**, 315
solid oxide fuel cell developments at Westinghouse, **37**, 133
solid oxide fuel cells – the next stage, **29**, 223
surface treatment of alloy separator in a planar-type solid oxide fuel cell, **50**, 361
three-dimensional and time-dependent simulation of a planar solid oxide fuel cell stack, **49**, 333
Solid phase equilibria
new aspects of the solid phase equilibria in the ternary Pb–Sn–Ca system for $x_{Ca} \leqslant 25$ at.%, **46**, 299
Solid polymer electrolyte fuel cells
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, **46**, 61
recent advances in solid polymer electrolyte fuel cell technology with low platinum loading electrodes, **29**, 367
Solid polymer fuel cells
the renaissance of the solid polymer fuel cell, **29**, 239
solid polymer fuel cell developments at Ballard, **37**, 181
status of solid polymer fuel cell system development, **49**, 129
water management and stack design for solid polymer fuel cells, **49**, 117
Solid/porous electrode interphase
the influence of the solid/porous electrode interphase on the behaviour of porous lead dioxide electrodes, **6**, 63
Solid solution cathodes
$(Mo_{0.3}V_{0.7})_2O_5$ as a solid solution cathode for Li cells. Part II. Structural characteristics and secondary cells, **7**, 145
$(Mo_{0.3}V_{0.7})_2$ as a solid solution cathode for Li cells. Part I. Electrochemical behaviour of primary cells, **7**, 133
Solid-state battery(ies)
all-solid-state batteries, **11**, 33
integrable lithium solid-state microbatteries, **26**, 615
lithium gaphitic oxide cells. Part V. An all-solid-state battery using graphite oxide as active cathodic

material, **26**, 529
multinary alloy electrodes for solid state batteries. I. A phase diagram approach for the selection and storage properties determination of candidate electrode materials, **38**, 351
performance of a solid-state battery with a proton-conducting electrolyte, **46**, 65
preparation and characterization of a thin film of polymer electrolyte by plasma CVD. Part IV. All-solid-state lithium batteries, **26**, 457
pulse discharge characteristics of solid-state lithium batteries, **27**, 3
Solid-state cells
application of silver boromolybdate glasses as electrolytes in solid-state cells, **32**, 397
discharge characteristics of solid-state cells incorporating thin films of a cuprous halide mixed phase, **24**, 349
discharge characteristics of solid-state cells with magnesium and copper electrodes and thin-film, **24**, 165
on the discharge mechanism of silver/alkylammonium polyiodide solid state cells, **2**, 389
the lithium/sodium thiochromite all-solid-state high temperature secondary cell, **28**, 279
a lithium solid-state cell based on the $Li_{3.75}S_{0.75}P_{0.25}O_4$ electrolyte, **2**, 387
self-discharge in solid state cells, **13**, 115
solid-state sodium cells — an alternative to lithium cells?, **26**, 341
Solid-state power sources
a review of silver, copper and lithium solid-state power sources, **1**, 333
Solid sulfate electrolyte
high temperature batteries with a solid sulfate electrolyte, **10**, 103
Solvent blending
effect of solvent blending on cycling characteristics of lithium, **20**, 299
Solvent effects
ion solvation in lithium battery electrolyte solutions. Part II. Solvent effects on lithium-ion intercalationin niobium triselenide, **36**, 17
solvent effects on rechargeable lithium cells, **20**, 279
Space
aerospace applications of batteries, **47**, 225
aerospace nickel/cadmium cell separator qualification program, **18**, 147
aluminum/oxygen batteries for space applications, **22**, 261
application of advanced flywheel technology for energy storage on space station, **22**, 313
application of regenerative fuel cells for space energy storage: a comparison to battery systems, **40**, 307
battery developement and testing at the European Space Agency, **21**, 241
the design and applicationof nickel/cadmium batteries in space, **15**, 119
effects of long term storage on aerospace nickel/cadmium cell performance, **21**, 297
electrocatalysts for oxygen electrodes in fuel cells and water electrolyzers for space applications, **29**, 413
European Space Agency fuel cell activities, **29**, 207
the fuel cell in space: yesterday, today and tomorrow, **29**, 193
a high performance hydrogen/chlorine fuel cell for space power applications, **47**, 321
a high power lithium thionyl chloride battery for space applications, **43**, 317
high surface area dual function oxygen electrocatalysts for space power applications, **22**, 409
human exploration mission studies, **29**, 291
impact of Shuttle environment on prelaunch handling of nickel/hydrogen batteries, **18**, 275
the importance of batteries in unmanned missions, **29**, 287
4.5 inch diameter IPV nickel/hydrogen cell development program, **18**, 279
internal impedance of nickel/cadmium batteries with applications to space, **38**, 295
investigation of long term storage effects on aerospace nickel/cadmium cell performance, **18**, 191
NASA Aerospace Flight Battery System Program Plan, **21**, 177
NASA Lewis advanced individual pressure vessel (IPV) nickel/hydrogen

technology, **47**, 233
an overview of solar dynamic systems for space applications, **18**, 293
performance goals in RFC development for low earth orbit space missions, **45**, 187
regenerative fuel cells for space applications, **22**, 377
review of flywheels for energy storage with reference to their potential for use in space, **8**, 311
sodium/sulfur battery flight experiment definition study, **29**, 555
space water electrolysis: space station through advanced missions, **36**, 235
SPE® water electrolyzers in support of Mission from Planet Earth, **36**, 219
status of the Space Station power system, **22**, 195
system mass optimization of hydrogen/oxygen based regenerative fuel cells for geosynchronous space missions, **38**, 303
Spacecraft
advanced nickel/cadmium batteries for geosynchronous spacecraft, **22**, 243
energy storage requirements for spacecraft, **3**, 277
investigation of nickel/hydrogen battery technology for the RADARSAT spacecraft, **18**, 259
overview of battery usage in NASA/GSFC LEO and GEO spacecrafts, **29**, 283
self-discharge characteristics of spacecraft nickel/cadmium cells at elevated temperatures, **18**, 169
thermal simulation of NiCd batteries for spacecraft, **2**, 147
Spacecraft battery(ies)
fault tree safety analysis of a large Li/$SOCl_2$ spacecraft battery, **21**, 207
international ultraviolet explorer (IUE) spacecraft battery performance update, **21**, 283
Space power systems
advanced electrochemical energy sources for space power systems - a review, **4**, 11
Spectral response
electrochemical method for improving the spectral response of CdS/Cu_2S heterojunctions, **13**, 85
Spectrophotometry
interaction of Fe^{2+}/Fe^{3+} and Ti^{3+}/Ti^{2+} with chromotropic acid: conductometric and spectrophotometric studies, **24**, 341
Spectroscopy
effect of counter cations on electrocatalytic activity of oxide pyrochlores towards oxygen reduction/evolution in alkaline medium: an electrochemical and spectroscopic study, **35**, 163
electrochemical and spectroscopic studies of carbon electrodes in lithium battery electrolyte systems, **43**, 47
photocurrent spectroscopy and its applciation to the study of the lead/acid system, **40**, 137
Spent battery(ies)
recovery of zinc and manganese from spent batteries, **48**, 389
Spinel electrodes
performance of lithium/manganese oxide spinel electrodes in a lithium polymer electrolyte cell, **34**, 39
spinel electrodes for lithium batteries, **21**, 1
Spinel oxides
structure and electrochemistry of the spinel oxides $LiTi_2O_4$ and $Li_{4/3}i_{5/3}O_4$, **26**, 397
Stability
anodic stability of propylene carbonate on manganese dioxide electrodes, **44**, 341
conductivity and stability towards lithium metal of lithium triflate ($LiCF_3SO_3$) and lithium bistrifluorosulfonylimide $Li(SO_2CF_3)_2N$ in amines and their mixtures with ammonia, **44**, 349
the cycling behaviour and stability of the lithium electrode in propylene carbonate and acetonitrile electrolytes, **10**, 1
effect of hydrogen and oxygen on stability of expanders and performance of lead/acid batteries, **46**, 349
the increase of stability of Li_xCoO_2 electrodes of cointercalated sodium, **39**, 313
stability of lithiated carbon electrodes in organic electrolytes, **44**, 409
thermal stability of lithium anodes in an amorphous V_2O_5/Li battery system, **44**, 517

Stabilization
alpha-phase stabilization in silver and copper halide solid electrolytes, **4**, 165
the theory of stabilization of the output power of a rechargeable fuel cell battery under conditions of significant concentration polarization, **4**, 145
Stable electrolytes
stable electrolytes for lithium batteires, **20**, 19
Stainless steel electrodes
the a.c. response of lithium, stainless steel, and porous carbon electrodes in thionyl chloride solutions, **14**, 123
Stand-by battery(ies)
updated status of conductance/capacity correlation studies to determine the state-of-health f automotive and stand-by lead/acid batteries, **48**, 135
Starter battery(ies)
changes in the morphology and structure of positive active material of starter batteries as a consequence of their use in vehicles, **47**, 189
Start-up
design for the cold start-up of a man-portable fuel cell and hydrogen storage system, **41**, 335
Start-up test
start-up test for sodium sulfide traction batteries, **17**, 142
State-of-charge
determination of the state-of-charge in lead/acid battteries by means of a reference cell, **27**, 297
estimation of the residual capacity of maintenance-free lead/acid batteries. Part 1. Identification of a parameter for the prediction of state-of-charge, **27**, 287
a new method of establishing the state of charge of lead/acid batteries with electrolyte circulation, **27**, 189
Stationary battery(ies)
advanced in manufacturing systems for tubular positive plates for stationary and traction lead/acid batteries, **31**, 255
automation and rationalization of the plate-stacking process for automotive, traction and stationary lead/acid batteries, **31**, 355
developments in lead/acid stationary batteries, **45**, 111
gelled-electrolyte lead/acid batteries for stationary and traction applications, **40**, 187
Statistical analysis
statistical analysis of the error function in the determination of the state-of-charge in lead/acid batteries, **39**, 95
Steam electrolysis cells
high temperature fuel and steam electrolysis cells using proton conductive solid electrolytes, **7**, 293
Storability
primary Li/$SOCl_2$ cells. X. Optimization of D cells with respect to energy density, storability and safety, **5**, 57
Storage
application of advanced flywheel technology for energy storage on space station, **22**, 313
application of regenerative fuel cells for space energy storage: a comparison to battery systems, **40**, 307
battery monitoring and integrity testing of large lead/acid storage batteries, **17**, 203
design for the cold start-up of a man-portable fuel cell and hydrogen storage system, **41**, 335
effect of precharge on nickel/hydrogen cell storage capacity, **27**, 69
effects of long term storage on aerospace nickel/cadmium cell performance, **21**, 297
effect of storage conditions on the performance of phosphoric acid fuel cells, **39**, 239
EGAT's experience with storage batteries for photovoltaic, **28**, 181
energy storage and the environment: the role of battery technology, **42**, 1
heat dissipation from lithium/silver vanadium oxide cells during storage and low-rate discharge, **20**, 179
investigation of long term storage effects on aerospace nickel/cadmium cell performance, **18**, 191
lead/acid batteries in utility energy storage and power control application, **35**, 395
the lead/acid storage battery industry in Turkey, **31**, 395

long-term storage of nickel/hydrogen cells, **22**, 221
multinary alloy electrodes for solid state batteries. I. A phase diagram approach for the selection and storage properties determination of candidate electrode materials, **38**, 351
nickel–hydrogen capacity loss on storage, **29**, 541
operating the world's largest lead/acid battery energy storage system, **31**, 311
performance testing of 10 kW-class advanced batteries for electric energy storage systems in Japan, **24**, 137
recent results regarding the storage capabilities of lithium organic cells using lithium perchlorate–ether solutions as electrolyte, **15**, 191
a simple approach to the determination of the charging state of photovoltaic-powered storage batteries, **41**, 65
solar energy: battery energy storage control, **35**, 1
storage batteries for submarines (extended abstract), **40**, 213
studies on the storage of elecrochemically impregnated nickel/cadmium cells, **50**, 81
test facility determining the performance of storage batteries for photovoltaic applications, **35**, 411
tubular-plate lead/acid battteries for remote-area energy storage, **28**, 187
a view from the AIAA. Introduction of new energy storage technology into orbital programs, **22**, 205
zinc/bromine battery for energy storage, **35**, 405

Strontium
lead–strontium alloys for battery grids, **2**, 337
performance of calcium/thionyl chloride cells containing $Sr(AlCl_4)_2$ electrolyte, **28**, 295
a study of the electrochemical properties of lead-strontium alloys for lead/acid batteries, **33**, 21

Strontium ceramics
strontium ceramics for chemical applications, **6**, 121

Structural characteristics
$(MoV_{0.7})_2O_5$ as a solid solution cathode for Li cells. Part II. Structural characteristics and secondary cells, **7**, 145
structural and electrochemical characteristics of plastic (PTFE) bonded nickel hydroxide electrodes, **12**, 195

Structural effects
structural effect of the zinc electrode on its discharge perfomrmance, **10**, 167

Structural factors
study of structural factors of lead/acid battery electrodes, **4**, 43

Structure–conductivity
structure–conductivity relationship in polymer electrolytes formed by network polymers from poly[dimethylsiloxane-g-poly(ethylene oxide)] and lithium perchlorate, **20**, 327

Submarines
possible fuel cell applications for ships and submarines, **29**, 181
storage batteries for submarines (extended abstract), **40**, 213
submarine battery technology — an aid to electric vehicle battery design?, **40**, 113

Subzero battery(ies)
kinetic barriers to the preferred electrode process in subzero battery electrolytes, **8**, 83

Sulfate passivation
sulfate passivation in the lead/acid system as a capacity limiting process, **8**, 159

Sulfation
sulfation in discharged lead/acid batteries, **8**, 143

Sulfide electrodes
cathodic performance of some sulfide electrodes in liquid ammonia, **3**, 157

Sulfolane-based electrolytes
a study of the properties of the surface layers formed on lithium electrodes in sulfolane-based electrolytes (extended abstract), **26**, 593

Sulfone-based electrolytes
rechargeable γ-MnO_2 for lithium batteries using a sulfone-based electrolyte at 150 °C, **44**, 569
sulfone-based electrolytes for lithium intercalation batteries, **16**, 193
system noise as a signal source for impedance measurements on batteries connected to operating equipment, **42**, 381

Sulfur
accelerated life testing of sodium/sulfur cells, **17**, 195
behaviour of a sodium/sulfur cell with a dynamic sulfur electrode, **4**, 33
beta-alumina electrolyte for use in sodium/sulfur batteries. Part 1. Fundamental properties, **6**, 143
beta-alumina electrolyte for use in sodium/sulfur batteries. Part 2. Manufacture and use, **7**, 45
casing materials for sodium/sulfur cells, **3**, 227
current trends in the development of sodium/sulfur batteries, **4**, 301
design and performance of a sodium/sulfur multitube cell, **10**, 263
design of the thermal management systems for sodium/sulfur traction batteries using battery models, **17**, 226
effects of sulfur additive on the performance of $Na/NiCl_2$ cells, **48**, 349
electrochemistry of a nonaqueous lithium/sulfur cell, **9**, 281
experimental study of six interconnected sodium/sulfur cells, **3**, 45
the impedance of sodium/sulfur cells at very low frequencies, **32**, 63
in-test and post-test analyses of sodium/sulfur cells, **17**, 228
investigation of a novel aqueous aluminum/sulfur battery, **45**, 311
a lithium solid-state cell based on the $Li_{3.75}S_{0.75}P_{0.25}O_4$ electrolyte, **2**, 387
nickel chevrel-phase sulfides $Ni_yMo_6S_{8-x}O_n$ as the cathode of lithium secondary batteries, **44**, 651
post-test analyses of sodium/sulfur cells and aqueous batteries, **17**, 221
progress in US Government sponsored battery development (1978–1979); sodium/sulfur batteries, **5**, 355
quantitative investigation of the elemental sulfur distribution in discharged $Li/SOCl_2$ cells, **17**, 353
recent advances in Na/S cell devlopment – a review, **3**, 299
sodium/sulfur battery flught experiment definition study, **29**, 555
some factors affecting sulfur electrode operation in sodium/sulfur cells, **3**, 29
some studies on sodium/sulfur cells, **1**, 109

Sulfur dioxide
a.c. impedance study of lithium in sulfur dioxide electrolytes, **20**, 37
anodic passivation of lithium in electrolytes for Li/SO_2 cells at low temperatures, **13**, 327
characterization of the chemistry at the anode and cathode in the Li/SO_2 battery system, **9**, 397
chemical analysis of charges Li/SO_2 cells, **21**, 227
conductivity of $LiAlCl_4$ solutions in nitromethane containing SO_2, **12**, 31
differential scanning calorimetry studies of possible explosion-causing mixtures in Li/SO_2 cells, **3**, 291
the effect of water on incinerated lithium/sulfur dioxide batteries, **18**, 371
electrochemical processes in a high power $Li–SO_2$ source, **10**, 377
electrochemical studies of P3-MT electrodes in $LiAlCl_4–SO_2$ electrolyte (extended abstract), **26**, 553
energy conversion by spontaneously reacting Li/SO_2 Cells, **7**, 365
the faradaic impedance of the lithium/sulfur dioxide system. A further examination of commercial cells, **19**, 7
hydrogen sulfide and sulfur dioxide evolution from a valve-regulated lead/acid battery, **48**, 277
interactions of SO_2 with $Ca(AlCl_4)_2–SO_2Cl_2$ electrolyte: Raman studies, **25**, 187
investigation and production control of Li/SO_2 cells by the galvanostatic pulse method, **8**, 395
Li/SO_2 rechargeable batteries, **35**, 153
the lithium/sulfur dioxide cell I. The porous carbon black cathode, **6**, 337 II. Material balance, **6**, 347
the lithium/sulfur dioxide primary battery – its characteristics, performance and applications, **5**, 35
new electrolytes for Li/SO_2 cells, **21**, 157
quality analysis of reserve-type silver oxide/zinc batteries by capacitance and phase-angle measurements, **21**, 165
Raman and ^7Li NMR spectroscopic studies of Li/SO_2 rechargeable cells, **35**, 143
Raman spectroscopic study of $LiAlCl_4/SOCl_2/SO_2$ systems, **14**, 77

safety hazards associated with the charging of lithium/sulfur dioxide cells, **18**, 89
studies of high reliability long-life Li/SO_2 cells, **20**, 27
surface films on lithium in acetonitrile–sulfur dioxide solutions, **9**, 273
Sulfur electrodes
behaviour of a sodium/sulfur cell with a dynamic sulfur electrode, **4**, 33
some factors affecting sulfur electrode operation in sodium/sulfur cells, **3**, 29
Sulfur rechargeable battery(ies)
rechargeable lithium/sulfur battery (extended abstract), **26**, 269
Sulfuryl chloride
lithium batteries utilizing $SOCl_2$–SO_2Cl_2 mixed electroytes, **36**, 1
the lithium/sulfuryl chloride battery: discharge behaviour, **5**, 263
polarization of the lithium electrode in sulfuryl chloride solutions, **9**, 289
solid electrolyte interphase (SEI) electrodes. Part VI: Calcium/$Ca(AlCl_4)_2$/sulfuryl chloride system, **10**, 125
Superconductor
high-temperature superconductor **40**, 361
Supporting electrolytes
new anions as supporting electrolytes for rechargeable lithium batteries, **20**, 287
Surface analysis
the physical and chemical state of phosphoric acid fuel cell assemblies after long term operation: surface and near-surface analysis, **36**, 137
Surface conditions
a comparative study of the effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, **13**, 297
Surface film effect
surface film effect on the electrochemical behaviour of active metals, **22**, 99
Surface films
surface films on lithium in acetonitrile–sulfur dioxide solutions, **9**, 273
Surface modification
surface modification of metal hydride negative electrodes and their charge/discharge performance, **38**, 335
Surface preparation
surface preparation of planar lead electrodes for electrochemical studies in sulphuric acid solutions, **34**, 289
Surface studies
electrochemical measurements and surface studies on acid oxygen carbon electrodes by the use of the ESCA method, **2**, 183
SWING system
the SWING system, a nonaqueous rechargeable carbon/metal oxide cell, **43**, 223
Systems' optimization
systems' optimization: achieving the balance, **49**, 53

Technology development
technology development and the Journal of Power Sources, **11**, 3
Teflon-bonded porous electrodes
a rotating-disk study on Teflon-bonded porous zinc electrodes, **15**, 93
TEISI model
iIntroduction to the scaling properties in elctrochemistry: from the "TEISI" model to the lithium fractal ordering in Li_xFeS_2 layered structure, **9**, 359
Telecommunications
photovoltaic power for telecommunications, **4**, 337
Telephone industry
new battery technologies and their potential impact in the use of energy in the telephone industry, **4**, 291
Tellurium
inhomogeneous electrochemical lithiation of V_2O_5–TeO_2 binary glasses in a propylene carbonate solution, **44**, 645
Temperature behaviour sealed Ni/Cd cells: the temperature behaviour of electrodes in excess of electrolyte, **6**, 1
Test facility
a multifunctional battery test facility, **31**, 369
test facility determining the performance of storage batteries for photovoltaic applications, **35**, 411
Testing
characterization testing of a 40 ampere hour bipolar nickel–hydrogen battery, **29**, 341
a computer-controlled discharge unit for the testing of nickel/cadmium cells

and batteries, **16**, 119
customer-side-of-the-meter load-levelling test facility, **23**, 193
equipment for testing automotive lead/acid batteries under SAE J240a conditions, **7**, 391
microprocessor-controlled, production-line, high-rate testing of lead/acid batteries with data collection and statistical-process-control evaluation of results, **31**, 363
a new battery testing facility, **35**, 417
new dimensions in batttery testing, **38**, 111
new technology for lead/acid battery testing, **23**, 99
performance testing of 10 kW-class advanced batteries for electric energy storage systems in Japan, **24**, 137
performance testing of advanced lead/acid batteries for electric vehicles, **16**, 107
qualification testing of General Electric 50 A h nickel/cadmium cells with Pellon 2536 separator and passivated positive plates, **21**, 313
testing rtechniques for materials used in lithium batteries, **20**, 75
test summary for advanced hydrogen cycle nickel/cadmium cell, **21**, 339

Tetra-alkyl ammonium compounds
effect of tetra-alkyl ammonium compounds on the performance of electrodes of sintered plate nickel/cadmium cells, **1**, 81

Tetrafluoroboric acid
effect of electrolyte impurity on the electrochemical performance of the lead/tetrafluoroboric acid/lead dioxide cell, **3**, 267

Tetrahydrofuran
the electrochemical behavior of polysulfides in tetrahydrofuran, **14**, 129
the use of the reactive ether, tetrahydrofuran (THF), in rechargeable lithium cells, **9**, 239

Tetramethoxyphenylporphyrin
a contribution to the characterization of heat treated electrocatalytically active tetramethoxyphenylporphyrinato-cobalt-II, **6**, 69
heat-treated Co-tetramethoxyphenylporphyrin on different carbon carriers as catalysts for the electrochemical reduction of oxygen in acid electrolytes, **13**, 217

Tetrathiafulvalenes
tetrathiafulvalenes as catalysts for the reduction of oxygen in acid electrolytes, **6**, 193

Thermal battery(ies)
discharge characteristics of lithium/molten nitrate thermal battery cells using silver salts as solid cathode materials, **16**, 243
the $LiAl/NaAlCl_4/MoCl_5$ thermal battery, **3**, 95
optimization of externally heated thermal battery, **36**, 79
a pre-testable low temperature lithium thermal battery, **9**, 417

Thermal behaviour
thermal behavior of electrochemical cells by liquid crystal display, **14**, 321

Thermal capacity
bulk thermal capacity determination for Li/BCX and $Li/SOCl_2$ cells, **39**, 193

Thermal conduction
calculation of the heat dissipation resulting from poor thermal conduction inside a solar collector filled with a microporous solid adsorbant, **50**, 391

Thermal damage
thermal damage in luminescent solar concentrators (LSC) for photovoltaic systems, **6**, 383

Thermal decomposition
TGA/MS studies of the thermal decomposition of NH_4VO53, **26**, 461

Thermal efficiency
thermal efficiency of solid electrolyte fuel cells with mixed conduction, **1**, 311

Thermal losses
thermal losses in solar refrigeration, **7**, 375

Thermal management
design of the thermal management systems for sodium/sulfur traction batteries using battery models, **17**, 226

Thermal modelling
computer simulation of thermal modelling of alkaline hydrogen/ooxygen fuel cells, **36**, 185
computer simulation of thermal modelling of primary lithium cells, **21**, 183

Thermal simulation

thermal simulation of NiCd batteries for spacecraft, **2**, 147
Thermal treatment
effect of thermal treatments on the properties of Cu_xS films obtained by evaporation, **9**, 41
the lithium/manganese dioxide cell. I. Oxygen and water release during the thermal treatment of MnO_2, **25**, 167
thin foil lithium/aluminum electrodes. The effect of thermal treatment on its electrochemical behaviour in non-aqueous media, **24**, 71
Thermodynamics
non-equilibrium thermodynamics of transport and reaction in lithium cells with liquid or polymeric electrolytes: application to impedance analysis, **26**, 491
thermodynamic determinations for lithium/thionyl chloride and lithium/BrCl–thionyl chloride cells as a function of temperature and depth of discharge, **24**, 229
a thermodynamic framework for estimating the efficiencies of alkaline batteries, **18**, 1
thermodynamic measurements on the $Li/SOCl_2$ couple, **26**, 441
Thermoelectric e.m.f.
thermoelectric e.m.f. of battery grade manganese dioxide, **7**, 95
Thermoelectric generator
recent advances in silicon–germanium alloy technology and an assessment of the problems of building the modules for a radioisotope thermoelectric generator, **19**, 247
Thermoelectric module
optimisation of thermoelectric module geometry for 'waste heat' electric power generation, **38**, 253
Thermoelectric power
thermoelectric power of AgI–Ag oxysalt ionic solids, **2**, 257
Thermogravimetric analysis
TGA/MS studies of the thermal decomposition of NH_4VO53, **26**, 461
Thermopassivation
on thermopassivation of the positive lead/acid battery electrode. Part 3: Thermopassivation of smooth PbO_2 electrodes, **14**, 277
thermopassivation of the positive lead/acid battery electrode. Part II. Influence of activating conditions on the thermopassivation of dry-charged positive electrodes of the lead/acid accumulator, **10**, 43
on thermopassivation of positive lead/acid battery electrodes. Part I. The influence of drying positive dry-charged lead/acid battery electrodes on thermopassivation and its causes, **7**, 201
Thin-film battery(ies)
multilayer thin-film batteries with poly(vinyl alcohol), **48**, 285
Thiochromites
chemically desodiated thiochromites as cathode materials in secondary lithium cells, **26**, 285
Thionyl chloride
abusive testing of large $Li/SOCl_2$ cells, **5**, 73
a.c. impedance studies of the anodic passivating layer in lithium/$SOCl_2$ batteries, **25**, 123
a.c. impedance studies on the lithium passivating layer of an $Li/SOCl_2$ cell (extended abstract), **26**, 419
the a.c. response of lithium, stainless steel, and porous carbon electrodes in thionyl chloride solutions, **14**, 123
bulk thermal capacity determination for Li/BCX and $Li/SOCl_2$ cells, **39**, 193
calcium/$Ca(AlCl_4)_2$–thionyl chloride (TC) cell. Effect of temperature and cell parameters on performance, **14**, 93
calcium thionyl chloride cells: anode studies at low temperatures, **25**, 13
in situ Raman spectra of the discharge products of calcium and lithium-anoded thionyl chloride cells – sulfur dioxide generation in oxyhalide systems, **34**, 1
characteristics of a lithium/thionyl chloride battery as a memory back-up power source, **20**, 47
comparison of the behaviour of the $Li/SOCl_2$ and $Ca/SOCl_2$ systems at elevated temperatures, **28**, 325
design of a safe cylindrical lithium/thionyl chloride cell, **12**, 61
determination of the heat capacities of Lithium/BCX (bromine chloride in thionyl chloride) batteries, **28**, 269

development of lithium/thionyl chloride batteries for CENTAUR, **22**, 277
the effect of impurities on the performance of lithium intended for lithium/thionyl chloride battery manufacture, **24**, 95
effect of silver, copper and palladium additives on the performance of carbon electrodes in an $Li/SOCl_2$ system, **16**, 233
fault tree safety analysis of a large $Li/SOCl_2$ spacecraft battery, **21**, 207
heat dissipation of high rate $Li/SOCl_2$ primary cells, **18**, 109
a high power lithium thionyl chloride battery for space applications, **43**, 317
an improved lithium–vanadium pentoxide cell and comparison with a lithium–thionyl chloride cell, **14**, 135
incorporation mechanism for doping of metal ions into a passivating film at the lithium/thionyl chloride interface, **45**, 7
influence of macrocyclic compounds on the electrochemical reduction of thionyl chloride at glassy carbon cathodes, **36**, 127
investigation of positive elecrode characteristics in high rate $Li/SOCl_2$ cells, **10**, 343
the kinetics of the reduction of thionyl chloride, **26**, 161
Li/SO_4 rechargeable cells containing added bromine, **21**, 143
the $Li/SOCl_2$ cell, **24**, 253
$Li/SOCl_2$ cells for high temperature applications, **9**, 295
lithium batteries utilizing $SOCl_2$–SO_2Cl_2 mixed electroytes, **36**, 1
the lithium/thionyl chloride battery - a review, **4**, 1
low temperature testing of $Li/SOCl_2$ cells, **26**, 211
macrokinetic study of thionyl chloride reduction on porous carbon electrodes, **26**, 427
mechanism of explosions of $Li/SOCl_2$ power sources, **39**, 375
microcalorimetric studies on lithium thionyl chloride cells: temperature effects between 25 °C and −40 °C, **39**, 83
micro-Raman study of electrode surface in $Li/SOCl_2$ cells (extended abstract), **26**, 439
NMR spectra of H-species in $SOCl_2$ electrolytes (extended abstract), **26**, 415
performance of calcium/thionyl chloride cells containing $Sr(AlCl_4)_2$ electrolyte, **28**, 295
performance of lithium alloy/lithium and calcium/lithium anodes in thionyl chloride cells, **15**, 239
polymer electrolyte coatings for lithium anodes in $SOCl_2$ cells, **44**, 385
a possible mechanism for the reduction of voltage delay in the $Li/SOCl_2$ system via cyanoacrylate coatings on lithium, **10**, 179
primary $Li/SOCl_2$ cells. X. Optimization of D cells with respect to energy density, storability and safety, **5**, 57
properties of LiCl layers formed on lithium in various $SOCl_2$ solutions, **20**, 53
properties of thionyl chloride solutions (extended absrtact), **26**, 5
quantitative investigation of the elemental sulfur distribution in discharged $Li/SOCl_2$ cells, **17**, 353
Raman spectroscopic studies of the structure of electrolytes used in the $Li/SOCl_2$ battery, **9**, 267
Raman spectroscopic study of $LiAlCl_4/SOCl_2/SO_2$ systems, **14**, 77
reaction products on current or potential reversal in $Li/SOCl_2$ cells, **13**, 287
reduction of calcium corrision in thionyl chloride-based electrolyte, **28**, 361
reduction of voltage delay in the $Li/SOCl_2$ system — a study of polymers with chlorine substituent groups as delay reducing additives, **20**, 61
reserve type lithium/thionyl chloride cells (extended abstract), **26**, 435
safety test results of lithium/thionyl chloride wound-type cells, **26**, 201
in situ micro-Raman study of discharge products of $Li/SOCl_2$ cells, **20**, 69
solid electrolyte interphase (SEI) electrodes. Part VII. The electrochemical behaviour of calcium in $Ba(AlCl_4)_2$ and $Sr(AlCl_4)_2$-thionyl chloride solutions (extended abstract), **26**, 423

space-charge model of the SEI conduction in the Li/$SOCl_2$ system, **44**, 391
studies of advanced catalysts for Li/$SOCl_2$ cells, **26**, 597
studies in lithium oxyhalide cells for downhole instrumentation. Use of lithium tetrachlorogallate electrolyte in Li/$SOCl_2$ cells, **45**, 343
a study of the reaction kinetics of $SOCl_2$ in electrolytes containing $AlCl_3$ or $LiAlCl_4$, **21**, 119
thermal modelling of a high power Li/$SOCl_2$ cell with parallel plates, **43**, 309
thermodynamic determinations for lithium/thionyl chloride and lithium/BrCl–thionyl chloride cells as a function of temperature and depth of discharge, **24**, 229
thermodynamic measurements on the Li/$SOCl_2$ couple, **26**, 441

Thiospinels
defect thiospinels: a new class of reversible cathode material, **26**, 277
thiospinels as cathode for lithium secondary battery, **44**, 619

Tin
age hardening of a Pb–0.1wt.%Ca–0.3wt.%Sn alloy and the effects of heat during battery manufacturing on this process, **42**, 35
alkaline nickel/tin cell system, **34**, 65
the anodic behaviour of tin and a lead–tin alloy in sulfuric acid, **40**, 217
behaviour of the $PbO_2/PbSO_4$ electrode in sulfur acid containing tin ions, **30**, 33
an *in situ* of the effect of tin on the passivation of lead–tin alloys, **50**, 141
continuous production of automotive lead/acid battery plates from lead–calcium–tin strip, **31**, 157
currentless passivation of the PbO_2 electrode with respect to the influence of tin, **30**, 41
development of new alloys of commercial aluminium (2S) with zinc, indium, tin, and bismuth as anodes for alkaline batteries, **27**, 235
discontinuous and continuous hardening processes in calcium and calcium–tin microalloyed lead: influence of 'secondary-lead' impurities, **33**, 27
the effect of tin on the performance of positive plates in lead/acid batteries, **38**, 63
hydrogen evolution on lead–tin alloys, **17**, 361
influence of tin on passivation of PbO_2 electrodes, **28**, 367
methanol oxidation on carbon-supported platinum–tin electrodes in sulfuric acid, **50**, 295
new aspects of the solid phase equilibria in the ternary Pb–Sn–Ca system for $x_{Ca} \leqslant 25$ at.%, **46**, 299
phenomena at the interface between positive active material and lead/calcium/tin grids, **30**, 23
pure lead and the tin effect in deep-cylcing lead/acid battery applications, **33**, 165
seeking enhanced lead/acid battery performance through the use of conductive tin-dioxide-coated glass-flakes, **48**, 83
thirteen years' experience with expanded lead/calcium/tin grids for automotive battery plates, **33**, 67

Titanium
advances in Li–TiS_2 cell technology, **36**, 395
diffusion of lithium in the TiO_2 cathode of a lithium battery, **20**, 127
discharge performance of composition insertion electrodes analysis of discharges of 50 vol.% Li_3N/TiS_2 electrodes, **44**, 733
electrochemistry of anatase titanium dioxide in lithium nonaqueous cells, **14**, 153
examination of design options for 35 A h ambient temperature Li/TiS_2 cells, **18**, 127
galvanostatic cycling of lithium/titanium disulfide cells in propylene carbonate and propylene carbonate–acetonitrile electrolytes, **10**, 23
insertion of lithium into RuO_2/TiO_2 electrodes, **44**, 547
interaction of Fe^{2+}/Fe^{3+} and Ti^{3+}/Ti^{2+} with chromotropic acid: conductometric and spectrophotometric studies, **24**, 341
the $Li_xTiS_2|Li_{(1-x)}CoO_2$ solid-state rocking chair battery, **44**, 481

lithium insertion into TiS_2 from various electrolytes, **43**, 301
the lithium/titanium disulphide secondary battery (extended abstract), **26**, 313
a model for the deliverable capacity of the TiS_2 electrode in a Li/TiS_2 cell, **43**, 181
on the possible use of titanium and its allows and compounds as active materials in batteries. A review, **2**, 201
the 3R phase of Li_xTiS_2, **26**, 301
rechargeable lithium/titanium disulphide cells of spirally-wound design, **26**, 309
structure and electrochemistry of the spinel oxides $LiTi_2O_4$ and $Li_{4/3}i_{5/3}O_4$, **26**, 397
a study of the discharge performance of the Ti/Fe redox flow system, **13**, 65
titanium disulfide as a cathode material in lithium batteries — a review, **6**, 307
vanadium and titanium oxides prepared by hydrolysis of alkoxides as insertion electrodes in lithium cells with polymeric electrolytes, **32**, 81

Tortuosity
tortuosity, **9**, 87

Tortuosity factor
measurement of the tortuosity factor of Ni/Cd battery electrodes by an improved conductivity method, **3**, 167

Traction applications
qualification of lead/acid batteries for traction applications, **17**, 119

Traction battery(ies)
advanced in manufacturing systems for tubular positive plates for stationary and traction lead/acid batteries, **31**, 255
automation and rationalization of the plate-stacking process for automotive, traction and stationary lead/acid batteries, **31**, 355
design of the thermal management systems for sodium/sulfur traction batteries using battery models, **17**, 226
gelled-electrolyte lead/acid batteries for stationary and traction applications, **40**, 187
investigations of the factors causing performance losses of lead/acid traction batteries, **50**, 153
an overview of the development of lead/acid traction batteries for electric vehicles in India, **38**, 165
start-up test for sodium sulfide traction batteries, **17**, 142

Traction cells
real-time charge efficiency monitoring and on-charge gas evolution in tall lead-acid traction cells, **27**, 155

Transition metal chloride electrodes
experimental studies of transition metal chloride electrodes in undivided cells using molten $NaAlCl_4$ electrolyte, **36**, 537

Transition metal oxyhalides
the M–O–X transition metal oxyhalides: a new class of lamellar cathode material, **3**, 137

Transition metals
Nafion®-bound carbon electrodes containing transition-metal phthalocyanines for oxygen reduction in solid-polymer-electrolyte fuel cells, **46**, 61
nature of the oxidizing centres in transition metal phosphorus trisulfides MPS_3 (Mfle, Ni)), **20**, 205
transition metal displacement in cathodic host structures upon lithium intercalation, **43**, 277

Transport
fuel cells for transportation, **29**, 251
non-equilibrium thermodynamics of transport and reaction in lithium cells with liquid or polymeric electrolytes: application to impedance analysis, **26**, 491
US Department of Energy fuel cell program for transportations applications, **37**, 171

Transport hindrances
comparative methods for the estimation of the activity and the transport hindrances of air gas-diffusion electrodes, **13**, 181

Transport mechanism
electrolyte creepage in galvanic cells. II. Transport mechanism at high pressures, **8**, 267

Transport numbers
comparative determination of effective transport numbers in solid lithium electrolytes, **41**, 253

Transport properties

block copolymers of poly(ethylene oxide) materials for polymer electrolytes (transport properties), **44**, 467
Tubular electrodes
effect of changes in engineering design on the distribution of reaction products and the electrochemical properties of tubular electrodes, **10**, 71
a study of the preparation variables of tubular positive electrodes for lead/acid batteries, **15**, 45
Tubular plate battery(ies)
tubular positive plate batteries for motive power and electric vehicle applciations, **40**, 39
Tubular plates
aspects of lead/acid battery technology. 2. Tubular postive plates, **41**, 163
Tungsten
activity and corrosion of tungsten carbide recombination electrodes during lead/acid battery operation, **40**, 333
electrochemical performance of silver/molybdotungstate-amorphous-electrolyte cells with charge-transfer-complex cathodes, **25**, 287
performance of tungsten carbide recombination electrodes under various orerating conditions, **40**, 341
Tungsten carbide
corrosion resistance and catalytic activity of tungsten carbide in phosphoric acid, **11**, 1
the effect of method of preparation on the catalytic activity of tungsten carbide, **4**, 65
the effect of the method of preparation on the catalytic activity of tungsten carbide for hydrogen evolution, **5**, 197
the effect of method of preparation on the corroision resistance and catalytic activity during corrosion of tungsten carbide. I. Corrosion resistance of tungsten carbide in sulfuric acid, **5**, 273
the effect of method of preparation on the corroision resistance and catalytic activity during corrosion of tungsten carbide. II. Changes in the catalytic activity of tungsten carbides during the corrosion process, **5**, 283
the electrochemical reduction of oxygen on cobalt-cemented tungsten carbide, **9**, 1
highly dispersed tungsten carbide for fuel cells with an acidic electrolyte, **1**, 169
influence of bonding and filling agents on the activity of tungsten carbide hydrogen electrodes, **1**, 277
influence of composition on the activity of tungsten carbide-diffusion hydrogen electrodes, **3**, 237
the preparation of the white tungstic acid modification and its use for the synthesis of highly active tungsten carbide, **7**, 83
sealed lead/acid battery with auxiliary tungsten carbide electrodes, **31**, 79
tungsten carbide electrodes for gas recombination in lead/acid batteries, **31**, 69
Tungstic acid
the preparation of the white tungstic acid modification and its use for the synthesis of highly active tungsten carbide, **7**, 83
Turbostratic structure
characterization of a turbostratic α-nickel hydroxide quantitatively obtained from an $NiSO_4$ solution, **35**, 279
preparation and characterization of cobalt-substituted α-nickel hydroxides stable in KOH medium. Part II. α-Hydroxide with a turbostratic structure, **35**, 263
Two layer electrodes
influence of carrier material on catalytic activity of double layer diffusion electrodes for reduction of oxygen in acidic electrolytets, **2**, 361

Unactivated cells
quality assessment of unactivated cells by a.c. impedance techniques, **16**, 285
Uranium
battery and other applications of a new proton conductor: hydrogen uranyl phosphate tetrahydrate, $HUO_2PO_{PO} \cdot {}^{1}H_2O$, **3**, 105
Utility applications
low-maintenance, valve-regulated, lead/acid batteries in utility applications, **33**, 145

performance analysis of zinc/bromine batteries in vehicle and utility applications, **5**, 173
Utility load levelling
application testing of batteries for utility load leveling and customer applications at the Battery Energy Storage Test (BEST) facility, **17**, 90
Utility requirements
fundamental studies of utility requirements for secondary batteries — lead/acid batteries, **17**, 295

Valve-regulated battery(ies)
conductance testing compared to traditional methods of evaluating the capacity of valve-regulated lead/acid batteries and predicting state-of-health, **40**, 235
development of a valve-regulated lead/acid battery for automotive use, **42**, 247
evaluating the state-of-health of flooded and valve-regulated lead/acid batteries. A comparison of conductance testing with traditional methods, **46**, 391
glass-fibre separators for valve-regulated batteries, **48**, 233
history and current status of valve-regulated lead/acid batteries in Japan, **38**, 117
hydrogen sulfide and sulfur dioxide evolution from a valve-regulated lead/acid battery, **48**, 277
influence of separator structure on the performance of valve-regulated batteries, **42**, 155
meeting European requirements with advanced designs of valve-regulated lead/acid batteries, **42**, 147
ten minutes-rechargeable, valve-regulated, lead/acid battery after deep discharge and stand, **46**, 383
valve-regulated lead/acid batteries: systems, properties and applciations, **46**, 361
valve-regulated lead/acid batteries with granular silica, **42**, 173
Vanadium
characteristics of a new all-vanadium redox flow battery, **22**, 59
characteristics and performance of 1 kW UNSW vanadium redox battery, **35**, 399
characterization of $Cu_2V_2O_7$ as cathode material for lithium cells by X-ray and photoelectron spectroscopy, **44**, 589
chemical and electrochemical lithium insertion into ternary transition metal sulfides MMo_2S_4 (M: V, Cr, Fe), **39**, 299
a comparative electrochemical study of MoO_3, V_2O_5 and MoV_2O_8 as rechargeable cathodes in lithium cells, **24**, 85
crystal chemistry of electrochemically inserted $Li_xV_2O_5$, **34**, 103
discharge characteristics and interface impedance of an Li/1 M $LiClO_4$(PC)/V_2O_5, **16**, 97
electrochemical behaviour of amorphous $V_2O_5(-P_2O_5)$ cathodes for lithium secondary batteries, **20**, 173
electrochemical behaviour of vanadium(V)/vanadium(IV) redox couple at graphite electrodes, **39**, 1
electrochemical characteristics of MnO_2–V_2O_5 composites serving as positive material for secondary lithium batteries, **35**, 313
evaluation of electrode meterials for vanadium redox cell, **19**, 45
evaluation of an NH_4VO_3-derived electrolyte for the vanadium-redox flow battery, **45**, 43
further electrochemical studies on Li/LiV_2O_4 secondary cells, **34**, 199
galvanostatic cycling of vanadium oxide (V_6O_{13}) in a nonaqueous secondary lithium cell, **10**, 33
heat dissipation from lithium/silver vanadium oxide cells during storage and low-rate discharge, **20**, 179
an improved lithium–vanadium pentoxide cell and comparison with a lithium–thionyl chloride cell, **14**, 135
inhomogeneous electrochemical lithiation of V_2O_5–TeO_2 binary glasses in a propylene carbonate solution, **44**, 645
insertion of lithium into vanadium molybdenum oxides, **20**, 187
investigation of the V(V)/V(IV) system for use in the positive half-cell of a redox battery, **16**, 85
the Li/LiV_3O_8 polymer electrolyte lithium battery. III. Investigation of the

electrode interfaces, **24**, 287
lithium insertion into $Li_{1-x}V_2O_4$ ($0.7 \leqslant x \leqslant 0.9$), **35**, 323
lithium insertion into oriented microcrystals and gels of anhydrous and hydrated vanadium pentoxide, **26**, 475
lithium/lithium vanadium oxide secondary batteries. IV. Evaluation of fractors affecting the performance of test cells, **15**, 13
lithium/silver vanadium oxide batteries with various silver to vanadium ratios, **21**, 133
low temperature electrolytes for lithium/silver vanadium oxide cells, **34**, 51
$(Mo_{0.3}V_{0.7})_2O_5$ as a slid solution cathode for Li cells. Part I. Electrochemcial behaviour of primary cells, **7**, 133
$(Mo_{0.3}V_{0.7})_2O_5$ as a solid solution cathode for Li cells. Part II. Structural charactetistics and secondary cells, **7**, 145
ω-$Li_xV_2O_5$ — a new electrode material for rechargeable lithium batteries, **34**, 113
optimization of the vanadium oxide (V_6O_{13}) electrode in a nonaqueous secondary lithium cell, **10**, 279
potassium vanadates — promising materials for secondary lithium batteries, **44**, 561
preparation and electrochemical characteristics of new Li/Mn/V/O system as positive materials for rechargeable lithium batteries, **44**, 635
preparation and evaluation of composite membrane for vanadium redox battery applications, **39**, 11
primary 1.5 V lithium cells with $BiVO_4$ cathodes, **27**, 29
reversible potassium vanadium bronze cathodes ($K_xV_6O_{13+y}$) with various potassium to vanadium ratios, **44**, 603
secondary lithium cell based on Li_x-$Cr_{1-y}Cy_{S_2}$ obtained in potassium polysulphide melts, **34**, 119
small particle-size lithium-vanadium oxide: an improved cathode material for high rate rechargeable lithium batteries, **27**, 35
a study of the incorporation reaction of lithium into V_6O_{13} in a rechargeable lithium battery, **26**, 347
a study of the V(II)/V(III) redox couple for redox flow cell applications, **15**, 179
TGA/MS studies of the thermal decomposition of NH_4VO53, **26**, 461
thermal stability of lithium anodes in an amorphous V_2O_5/Li battery system, **44**, 517
thin-film vanadium oxide electrodes for lithium batteries, **43**, 127
vanadium-doped lithium thiochromite: properties, crystal structure and electrochemical performance in rechargeable Li cells, **34**, 129
vanadium oxides as electrode materials for rechargeable lithium cells, **20**, 165
vanadium oxides in electrodes for rechargeable lithium cells, **20**, 157
vanadium and titanium oxides prepared by hydrolysis of alkoxides as insertion electrodes in lithium cells with polymeric electrolytes, **32**, 81
V_2O_4S — a new transition metal oxysulfide as positive for lithium batteries, **44**, 577
V_2O_5-based glasses as cathodes for lithium batteries, **26**, 381
V_6O_{13} as cathode material for lithium cells, **14**, 235
voltage delay and complex impedance characteristics of a high-rate lithium/silver vanadium oxide multiplate battery (extended abstract), **26**, 365

Vehicle applications
performance analysis of zinc/bromine batteries in vehicle and utility applications, **5**, 173

Vehicle battery(ies)
an iron/air vehicle battery, **2**, 287

Vehicle electrical systems
automotive batteries — from a single component to an entire part of the electrical system in a vehicle, **33**, 331
the battery designer's challenge — satysfying the ever-increasing demands of vehicle electrical systems, **33**, 309

Vehicle power source
the C.G.E. circulating zinc/air battery: a practical vehicle power source, **1**, 17

Vehicle testing
the validity of cycle life bench test data in relation to real world in-vehicle

testing, **17**, 257
Viscosity
conductivity and viscosity studies of dimethyl sulfoxide (DMSO)-based electrolyte solutions at 25 °C, **50**, 283
Vitreous electrolytes
lithium borophosphate vitreous electrolytes, **14**, 87
Voltage
monitoring volage fluctuations for the characterization of lithium cells, **34**, 233
Voltage compatibility
lithium batteries with voltage compatibility with conventional systems, **5**, 83
Voltage delay
a possible mechanism for the reduction of voltage delay in the Li/$SOCl_2$ system via cyanoacrylate coatings on lithium, **10**, 179
reduction of voltage delay in the Li/$SOCl_2$ system — a study of polymers with chlorine substituent groups as delay reducing additives, **20**, 61
voltage delay and complex impedance characteristics of a high-rate lithium/silver vanadium oxide multiplate battery (extended abstract), **26**, 365
Voltage drop
calculation of potential distribution and voltage drop at electrodes on high-rate discharge: literature survey and computer-aided approach, **42**, 103
Voltage fluctuations
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, **41**, 321
Voltage noise
voltage noise measurements on sealed lead/acid batteries, **27**, 177
Voltage–temperature charge
voltage–temperature charge verification testing of 34 ampere hour nickel/cadmium cells, **18**, 197
Voltage transients
experimental and theoretical investigation of voltage transients of magnesium/manganese dioxide dry cells in absence of anode-film breakdown, **24**, 295
Voltammetric behaviour
studies concerning charged nickel hydroxide elctrodes. Part V. Voltammetric behaviour of electrodes containing β-$Ni(OH)_2$, **9**, 185
Voltammetry
voltammetric study of an iron electrode in alkaline electrolyte, **25**, 111

Waste
processing of wastes from lead/acid battery production, **33**, 279
Waste heat
optimisation of thermoelectric module geometry for 'waste heat' electric power generation, **38**, 253
Waste treatment
reclaim and wast treatment of lead from lead/acid battery plants, **23**, 249
Water
water management and stack design for solid polymer fuel cells, **49**, 117
Water addition
influence of water addition on structural and electrochemical behaviour of liquid ammoniates: a study of Li-$ClO_4 \cdot 4NH_3$ ammoniate/H_2 mixtures, **20**, 305
Water electrolysis
space water electrolysis: space station through advanced missions, **36**, 235
Water electrolyzers
recent advances in SPE® water electrolyzer, **47**, 369
SPE® water electrolyzers in support of Mission from Planet Earth, **36**, 219
Weibull analysis
how handy is Weibull? Or, the use of failure distributions in the planning and analysis of battery experiments, **17**, 269
Welds
impedance studies of inter-cell welds in automotive lead/acid batteries, **30**, 301
Wound-type cells
safety test results of lithium/thionyl chloride wound-type cells, **26**, 201

X-ray diffraction
characterization of nickel oxide in molten carbonate. II. *In situ* X-ray diffraction of higher nickel oxide in molten carbonate, **32**, 135

comments on sample treatments in the X-ray diffraction analysis of the oxidation products of lead, **32**, 71
manganese dioxide – A review of a battery chemical. Part I. Chemical syntheses and X-ray diffraction studies of manganese dioxides, **15**, 209
PEAKS®: a PC-based method for quantitative X-ray diffraction phase analysis of lead/acid battery materials, **32**, 315
quantitative X-ray diffraction analysis of α-PbO/β-PbO in lead–acid battery primary oxide, **13**, 171
X-ray diffraction analysis of Barton oxides, **15**, 77
X-ray diffraction studies of basic lead sulfates, **31**, 225
X-ray powder diffraction data
calculated X-ray powder diffraction data for phases encountered in lead/acid battery plates, **9**, 55
X-ray spectroscopy
characterization of $Cu_2V_2O_7$ as cathode material for lithium cells by X-ray and photoelectron spectroscopy, **44**, 589

Yttrium
high-temperature superconductor, $YBa_2Cu_3O_{7-x}$ as all-solid-state lithium cell, **40**, 361
oxygen ion conductionin pure and yttria-doped barium cerate, **14**, 295

Zinc
the analysis of voltage fluctuations for the characterization of rechargeable alkaline manganese dioxide–zinc cells, **41**, 321
a comparative study of the effects of surface condition and amalgamation on the corrosion and polarisation characteristics of pure zinc and two battery zinc alloys in Leclanché related electrolyte, **13**, 297
construction of miniature silver/zinc batteries and the technology for their mass production, **8**, 67
development of new alloys of commercial aluminium (2S) with zinc, indium, tin, and bismuth as anodes for alkaline batteries, **27**, 235
development of Ni/Zn cells, **34**, 243
effect of additives on the corrosionof zinc in KOH solution, **6**, 47
the effect of the amount of electrolyte in the anode gel on the rechargeabilitty of alkaline manganese dioxide/zinc cells, **27**, 145
effect of carbonate ions on the behaviour of zinc in 30% KOH, **34**, 381
effect of Cd, Ni, Zn, and Co ions on electrode reactions of the lead/acid battery, **32**, 43
effect of zinc and iron ions of the electrochemistry of nickel oxide electrode: slow cyclic voltammetry, **47**, 79
electrochemical charactrization of flat-plate rechargeable alkaline manganese dioxide/zinc cells, **47**, 13
electrochemical studies on a zinc–lead–cadmium alloy in aqueous ammonium chloride solution, **47**, 177
the electrochemistry of porous zinc. II. The polarisation behaviour of plain and polymer-bonded microelectrodes in KOH solutions, **15**, 245
the electrochemistry of porous zinc. IV. The Faradaic impedance of plain and polymer-bonded porous electrodes in KOH solutions, **15**, 61
the electrochemistry of porous zinc. V. The cycling behaviour of plain and polymer-bonded porous electrodes in KOH solutions, **15**, 261
the electrodeposition of zinc onto graphitic carbon substrates from alkaline electrolytes, **24**, 21
electrolyte additives for zinc-anoded secondary cells. II. Quaternary ammonium compounds, **32**, 31
further work on additives in the zinc plates of nickel/zinc test cells, **11**, 7
gas evolution behavior of Zn alloy powder in KOH solution, **38**, 317
long life sealed nickel/zinc cell using a new separator, **9**, 147
methods for the reduction of shape change and dendritic growth in zinc-based secondary cells, **35**, 333
a novel cell: zinc/dichloroisocyanuric acid in aqueous chloride medium, **39**, 323
performance of porous plastic separators in zinc/bromine cells, **22**, 29
progress in US Government sponsored battery development (1978–1979);

nickel/zinc batteries, **5**, 327
pulse power tests on nickel oxide electrodes for nickel/zinc eletric vehicle batteries, **21**, 33
rechargeability of manganese dioxide/zinc cell using zinc sulfate electrolyte, **48**, 303
a rechargeable $Zn/ZnCl_2$, NH_4Cl/polyaniline/carbon dry battery, **45**, 153
recovery of zinc and manganese from spent batteries, **48**, 389
sealed nicek/zinc cells, **37**, 297
self-discharge of low-mercury zinc/silver-oxide button cells, **22**, 163
zinc composite anode for batteries with solid electrolyte, **38**, 379
Zinc/air alkaline battery(ies)
zinc/air alkaline batteries – a review, **6**, 203
Zinc/air battery(ies)
the C.G.E. circulating zinc/air battery: a practical vehicle power source, **1**, 17
Zinc/air cells
a cylindrical R-20 size zinc/air primary cell, **4**, 77
Zinc/air cells
on the suppression of self discharge of the zinc electrodes of zinc/air cells and other related battery systems, **10**, 197
Zinc battery(ies)
laboratory-scale evaluation of secondary alkaline zinc batteries for electric vehicles, **47**, 1
Zinc/bromine battery(ies)
application of non-aqueous solvents to batteries. Part I. Physicochemical properties of propionitrile/water tow-phase solvent relevant to zinc/bromine batteries, **10**, 309
an approximate model for estimating the faradaic efficiency loss in zinc/bromine batteries caused by cell self-discharge, **50**, 343
circulating electrolyte zinc/bromine battery. Test program and procedures, **17**, 135
performance analysis of zinc/bromine batteries in vehicle and utility applications, **5**, 173
some properties of zinc/bromine battery electrolytes, **16**, 53
zinc/bromine battery for energy storage, **35**, 405
Zinc/bromine cells
performance of porous plastic separators in zinc/bromine cells, **22**, 29
performance of zinc/bromine cells having a propionitrile electrolyte, **23**, 365
selection of quaternary ammonium bromides for use in zinc/bromine cells, **18**, 349
Zinc cells
electrolyte additives for zinc-anoded secondary cells, **28**, 345
a new type of auxiliary electrode for alkaline zinc cells, **23**, 351
Zinc/chloride battery system
life-testing of 1.7 kWh zinc/chloride battery system: cycles 1-1000, **7**, 121
Zinc/chlorine battery(ies)
a design for zinc/chlorine batteries, **8**, 359
Zinc electrodes
bismuth oxide as an additive in pasted zinc electrodes, **15**, 169
cycling behaviour of electrodeposited zinc alloy electrode for secondary lithium batteries, **40**, 283
the electrochemistry of some primary cells incorporating zinc electrodes, **9**, 205
experimental survey of rechargeable alkaline zinc electrodes, **13**, 9
impedance measurements on porous zinc electrodes operating under starved electrolyte conditions, **45**, 55
new zinc and iron electrodes of the second kind of sulfuric acid, hydrofluoric acid and (cyclo)alkylammonium hydrogen sulfate, **32**, 287
the performance of secondary zinc electrodes in modified alkaline electrolytes. I. Galvanostatic passivation studies in alkaline electrolyte, **39**, 273
preparation and properties of coated rechargeable zinc electrodes, **2**, 177
a rotating-disk study on Teflon-bonded porous zinc electrodes, **15**, 93
soluble zinc electrode as anode in alkaline accumulators, **5**, 235
structural effect of the zinc electrode on its discharge perfomrmance, **10**, 167
a study of rechargeable zinc electrodes for alkaline cells requiring anodic limitation, **6**, 271

on the suppression of self discharge of the zinc electrodes of zinc/air cells and other related battery systems, **10**, 197
Zinc/halogen battery(ies)
progress in US Government sponsored battery development (1978–1979); zinc/halogen batteries, **5**, 351
Zinc/manganese cells
a new type of nonpoisonous addition agent for substituting mercury in zinc/manganese dry cells, **45**, 169
Zinc/mercuric oxide cells
Capacity of zinc/mercuric oxide cells, **3**, 359
Zinc/nickel oxide cells
the effect of pulse charging on the cycle-life performance of zinc/nickel oxide cells, **22**, 77
Zinc plates
further work on additives in the zinc plates of nickel/zinc test cells, **11**, 7
Zinc/silver oxide cells
investigation of low-zinc-solubility electrodes and electrolytes in zinc/silver oxide cells, **39**, 333
Zinc sulfate electrolyte
rechargeability of manganese dioxide/zinc cell using zinc sulfate electrolyte, **48**, 303
Zirconium
determination of the dissociation constant of molten $Li_2CO_3/Na_2CO_3/K_2CO_3$ using a stabilized zirconia oxide-ion indicator, **16**, 75
effect of non-stroichiometry on the electrode properties of zirconium diselenide in lithium/polymer electrolyte batteries (extended abstract), **26**, 273
methanol oxidation and hydrogen reactions on NiZr in acid solution, **45**, 291
